

We combine tradition and modern performance under one roof

The Roto Conservation roof window

Conservation roof window

The Roto principle: More freedom. More comfort.

The superior roof window

The Roto Conservation roof window: Designed to cater for a British traditional style

Traditional Values

Roto combines tradition and modern performance under one roof. The many years of experience gained in the renovation market have inspired our Conservation window. It gives a traditional appearance with the modern technology of a premium product and the window blends perfectly into the roof slope.

Renovation requires confidence

A range of regulations have to be considered before gaining official acceptance for renovation work. The Roto Conservation window fulfils the regulations and the demands of traditional architecture without compromise. We offer a window finished in black with a glazing bar in the centre that meets these requirements, and also provides energy efficiency.

Energy efficiency for tomorrow

Anyone renovating today has to think about tomorrow. Continuously increasing energy costs and environmental regulatory requirements make this a necessity. With the Roto Conservation window you do not have to worry about these aspects. A considerable contribution is made by the safety and heat insulation glazing fitted as standard. The Roto Conservation window is available in six standard sizes. For the roof flashing you can choose between either a version for flat or profile tiles.

Advantages at a glance

- Perfectly blends into the roof slope
- Predetermined opening position
- Good ventilation performance due to the axis in the upper third
- Self-locking cleaning position

Aesthetic appearance. Profiles made of solid pine timber.

Plenty of headroom
Pivot point in upper window third
