

Innovation in Design

ASSA ABLOY

The global leader in
door opening solutions

Function follows **Form**

Scandinavian influences have long been powerfully embraced and honed by architectural and interior design practices across the globe.

ASSA ABLOY, a Scandinavian company, is firmly committed to these principles, combining aesthetics with function, ergonomics, safety, longevity and environmental responsibility through our comprehensive range of architectural product solutions.

Our guiding principles permeate everything we do

Front cover : The Shard

“On such a high-profile build it was important to work with experienced suppliers and well known brands. ASSA ABLOY had the expertise and product depth to deliver fit for purpose solutions, as well as vast experience in the balance between providing access and preventing security and fire threats.”

EMTEC Group Ltd

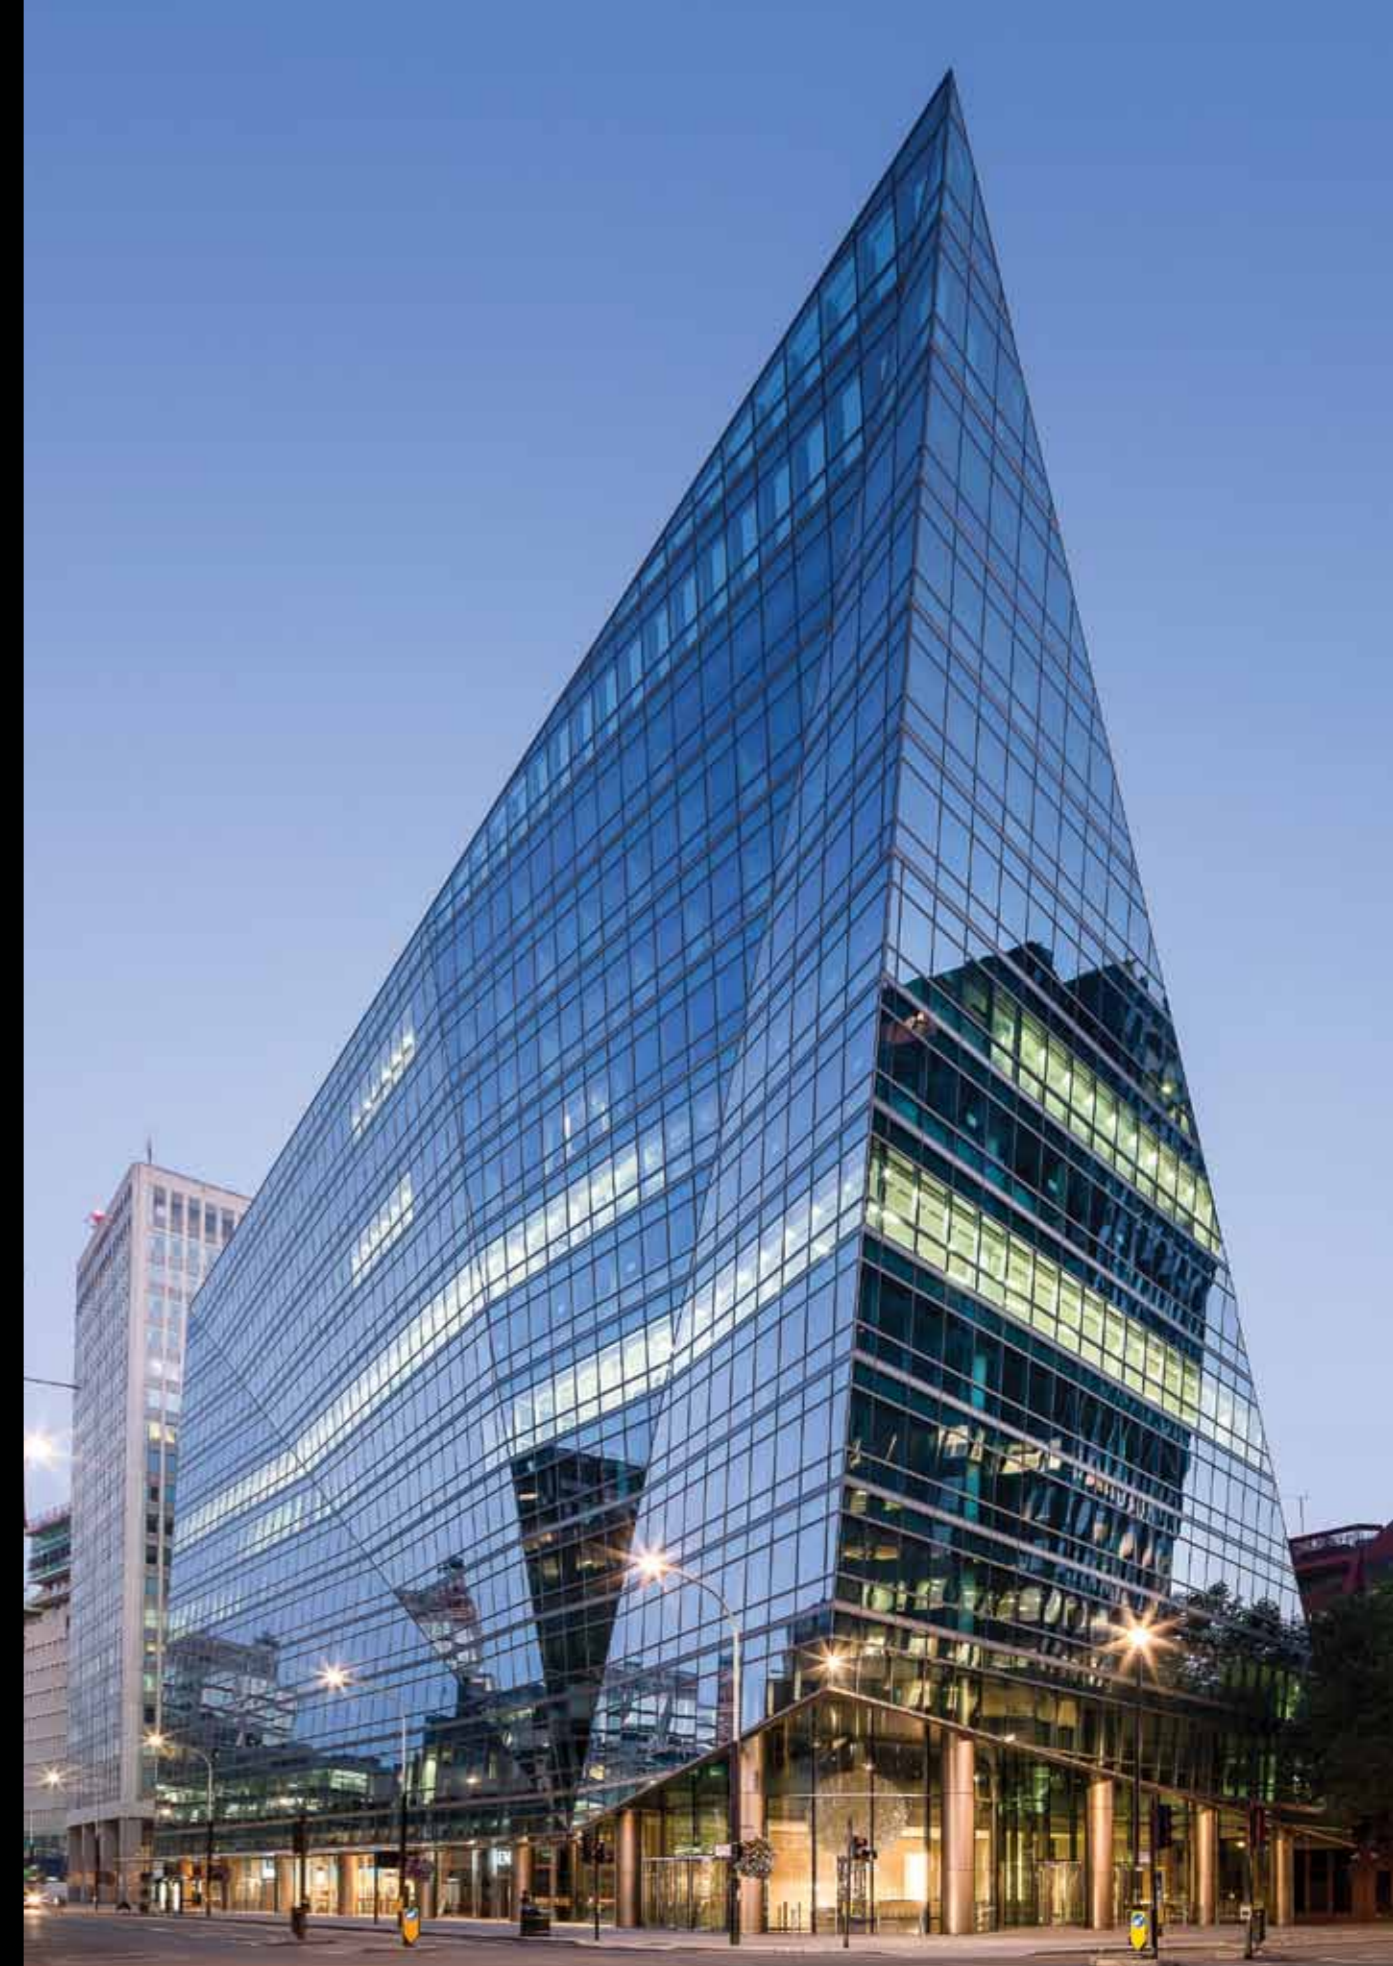

Product Leadership

Products that offer aesthetic perfection in seamless unison with ultimate security.

From security doors and sophisticated access control technology to classic, cutting edge and custom ironmongery solutions, our ability to professionally coordinate form and function with a fully integrated BIM interface enables ASSA ABLOY to offer unique attractive and robust solutions to meet even the most discerning design requirements.

Proven design led solutions delivering full life cycle efficiencies throughout the build process

62 Buckingham Gate

"Having worked with ASSA ABLOY on a number of projects, including Cardinal Place, New Street Square and One New Change, we knew the company had the resources and expertise to deliver."

Land Securities Group PLC

Specification Simplified

ASSA ABLOY are totally committed to easing the specification burden through full BIM interaction for our timber and metal door sets together with an NBS writing support service for those items that may still need to be specified as standalone components.

As a trusted auxiliary member of your design team our specialists will ensure that the solutions identified will accord with your clients exacting design, legislative, fiscal and operational requirements.

As a global manufacturer, ASSA ABLOY offer the reassurance of local onsite technical support and long term warranties, bringing true peace of mind to the developer, architect, contractor, client and building operator alike

Canary Wharf

Each ASSA ABLOY specification was delivered in accordance with an individual development's unique architectural aesthetic, whilst accommodating the client's security, fire, life safety and building operational efficiency requirements.

Optimum Performance

The secret to a successful security strategy lies with the invisible integration of a clients brief within the environment in which it is to protect whilst providing the consumer with a user friendly interface.

To attain such an indiscernible solution we gain a clear understanding of how a building will operate then rigorously review our extensive range of access control solutions to determine the correct combination of components available to provide optimum compatibility yet retaining function and form as the waypoints in the specification process.

Design, integration, operation and durability are assured

Riverbank House

Specification, supply and installation of ASSA ABLOY specialist security and personnel door sets throughout this landmark Thames side development.

Service Delivered

Service is the cornerstone of success.

Critical time management in the delivery of correct product samples and schedules can make or break a client presentation. ASSA ABLOY fully understand the demands placed upon architects and designers to deliver in accordance with your clients' expectations.

Working from conception to completion ASSA ABLOY have the overwhelming desire to become your service driven solution provider

New Court

Supplying a cutting edge access control solution together with a comprehensive range of specialist steel door sets allowed ASSA ABLOY to surpass our discerning client's operational and design requirements.

Leading Standards

Building information modelling is becoming the industry standard for construction projects.

ASSA ABLOY have actively developed unique solutions for designers adopting BIM principles.

Complete door set BIM models are available for both timber, steel and security door applications and these may be customised to your project's unique design requirements. Each of our objects profile data, including COBie for public projects, to provide invaluable information for digital search and calculation.

As a one stop solution provider our BIM objects consider whole life cycle costs making the specification process transparent to all.

BIM not only improves construction efficiency but also protects the integrity of your specification for the full life cycle of the development

One New Change

As one of the largest single retail and leisure destinations in the City of London ASSA ABLOY were contracted to supply and install a wide range of fire and acoustic door sets to this landmark development.

Queen Elizabeth Olympic Park

ASSA ABLOY have extensive experience in supplying door set and access control solutions to many sporting arenas across the UK.

Stadia including those listed below have all experienced ASSA ABLOY specification team involvement, from project management through to specialist electronic access control and custom door fabrication and installation.

London Heathrow Terminal 2, The Queen's Terminal

As Europe's busiest airport, Heathrow required a high security specification for the new Queen's Terminal. The design team turned to ASSA ABLOY to provide an exacting door set solution encompassing high levels of safety, security and fire protection for passengers and staff alike.

Kings Cross Station

The major refurbishment and redevelopment of this landmark station, both over and underground, was undertaken to meet ever increasing consumer demand with fire safety being of the highest priority.

ASSA ABLOY products were fabricated to this scheme's bespoke design requirements and then rigorously tested to ensure that they not only met but exceeded the most stringent of safety standards.
