## A greener way of working

## Sustainable use of wood

Kronospan only supply FSC certified wood products. This means we've used either virgin material traceable to a forest that is managed sustainably, or recycled waste wood diverted from landfill. We now recycle 300,000 tonnes of wood each year.

## How recycling wood into chipboard benefits the environment

- Recycled wood is delivered using standard wagons allowing the same vehicles to be used to deliver finished product.
- When wood decomposes, it produces methane, a powerful greenhouse gas. Each tonne of wood we recycle and divert from landfill reduces carbon emissions by 1.5 tonnes. Currently, we are reducing these harmful emissions by 450,000 tonnes each year.

### Efficient use of resources

We monitor our use of water and energy constantly to identify opportunities to reduce usage, and have invested heavily in processes that generate energy from wood-based carbon neutral fuel. This saves us money and reduces carbon emissions by over 60,000 tonnes each year.

**If we can't use it, we find someone who can**

When a waste material cannot be used in one of our onsite processes, we seek out recycling opportunities at other companies. Currently, we recycle 95% of waste either onsite or at one of our partners. We plan to reduce waste to landfill to less than 2% by the end of 2008.
