- Universities
- Parks
- Sports Stadia

The PUPS advantage

a discreet design coupled with the benefits to local authorities & communities

Aberdeen University
Power point raised in
University campus

PUPS practicality

easy to use and
easy to install...

Why are Pop Up Power points so useful?

Staging an outdoor event in the urban public environment is a great commercial activity for any local authority. Attracting more and more people to make use of public space not only boosts the commercial viability of our town centres, but it also helps to create a sense of community and well-being in any urban development. Music festivals, carol concerts, exhibitions, markets: all of these help to create a thriving local economy.

Retractability = discretion

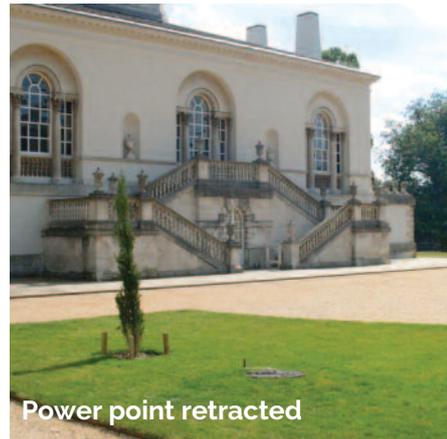

The immediate benefit of this type of equipment seems to be the discreetness of their installation. With the current minimalist trend in landscape design for our towns and cities, the fully retractable units can be stored safely underground until they are needed - and you wouldn't even know they were there, thanks for the unique way in which they can be "paved over".

No more power problems

One of the regular problems with holding successful outdoor events is that of electricity supply. Ensuring that a constant power supply is maintained when and where it is necessary is a constant headache for any events management team. This is no longer an issue with our retractable power points - each provides an efficient electricity supply for any outside event.

Our clients

We have installed our pop-up units at a variety of locations throughout the UK including:

Power point retracted

Power point raised

Chiswick House, Hounslow.

A discreet cover hides the power point outside the main entrance.

Secure bollard power tamper-proof power units in bollard format

The stylish design of our bollards makes them perfect for use as elements of street furniture and decor for public areas and town centres. They can be coloured to blend in with existing urban furniture, thus creating an attractive multifunctional space thanks to the services provided within them such as electricity, water, data/telephone connections, etc.. Products can also be developed for specific projects.

Pop Up power bollards

Parc Paris Top

Domed Top

Button Top

Sloping Top

Bollards available in 3 standard diameters:

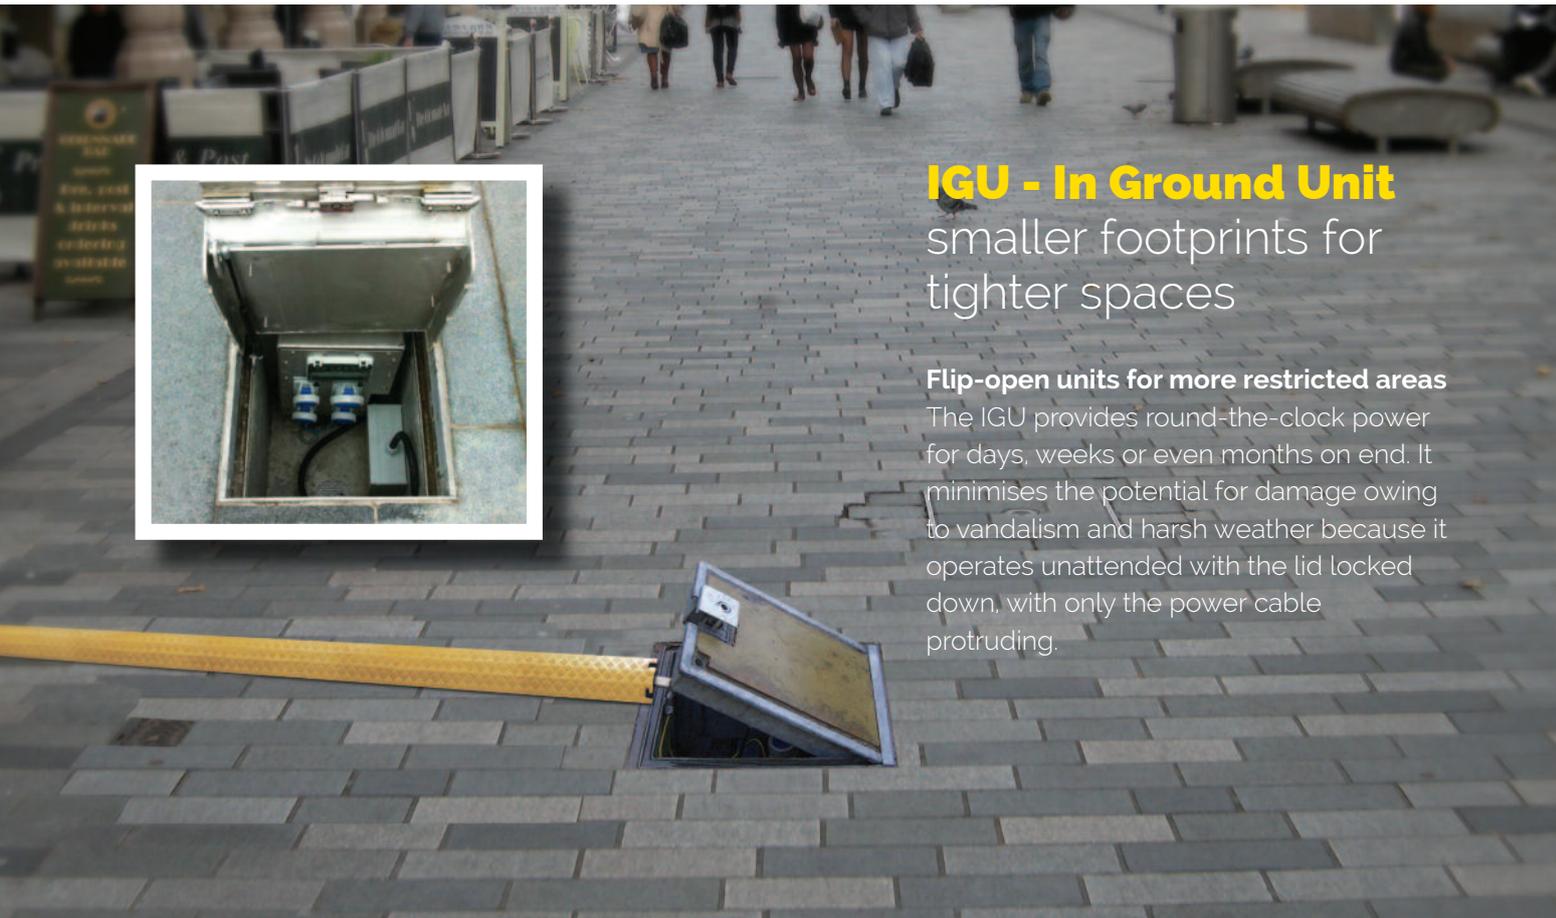

250mm

325mm

500mm

Standard base height 800mm NOT INCLUDING TOP. Available as surface or root mounted.

IGU - In Ground Unit

smaller footprints for tighter spaces

Flip-open units for more restricted areas

The IGU provides round-the-clock power for days, weeks or even months on end. It minimises the potential for damage owing to vandalism and harsh weather because it operates unattended with the lid locked down, with only the power cable protruding.

what the press are saying

comments from local government

“One of the regular problems with holding successful outdoor events is that of electricity supply. Ensuring that a constant power supply is maintained when and where it is necessary is a constant headache for any events management team. Well, this issue may no longer be a problem, as these latest power units, manufactured by Pop Up Power Supplies Ltd, provide efficient electricity supply for the outside environment.

The immediate benefit of this type of equipment seems to be the discreetness of their installation. With the current minimalist trend in landscape design, the fully retractable units can be stored safely underground until they are needed - and you wouldn't even know they were there, thanks for the unique way in which they can be 'paved over!'”

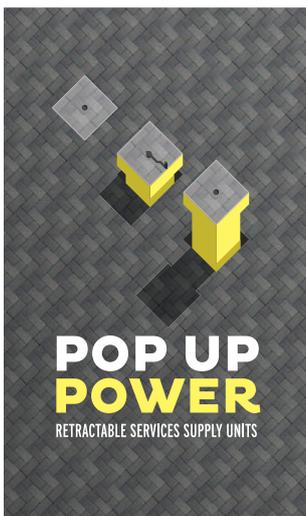

“An absolute Godsend!”

Keith Watson

Building Services Engineer, University of Exeter
