EXPERIENCE MOTORSPORT AND MORE WITH MEA

With excess water on any circuit racing cars can easily aquaplane out of control. As each corner approaches the driver's worst nightmare can all too easily become a harsh reality. To make the racetrack as safe as possible an efficient and proven drainage system is absolutely essential.

With MEA, you'll always be on a dry line!

SOLUTIONS

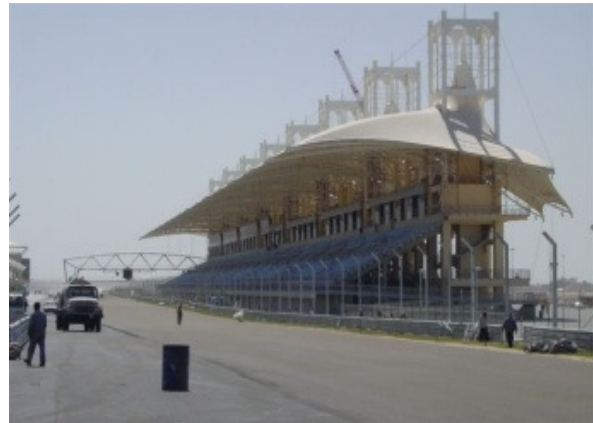

DRAINAGE

Innovation and experience – the drivers of success!

Have you ever asked yourself what a drainage system has in common with motor racing?

More than you might think, since many high-tech materials and state-of-the-art technologies can be found in both fields.

F1 Circuit – Bahrain
14 km MEADRAIN Supreme
EN1000-EN3000 with F900 gratings

Test circuit – Stegenwald, Austria
MEADRAIN Classic BGU-Z100

Excess water on the circuit often leads to racing cars sliding out of control. The sport's first priority has to be safety and a highly efficient drainage system is a totally essential factor when designing any racetrack.

MEA®

For the drainage of race circuits MEA Drainage has a close cooperation with Tilke, the world leading designer for racetrack and test facilities. Together with engineers, customers and users we are working on a daily basis on new technologies and improvement of our drainage systems.

Dunlop test circuit – Wittlich-Neuerburg, Germany
MEADRAIN Traffic D1000 with F900 gratings

ATP test circuit – Papenburg, Germany
(used a lot by Mercedes Benz)
MEADRAIN Supreme EN1000

Skidpan Rockingham Speedway
Northamptonshire, Great Britain
270 Meter of MEADRAIN Supreme EN3000 with F900 gratings

We are not only providing drainage channels, but also a complete modular system including specially formulated gratings. Gratings are to channels what tyres are to racing cars: they are the point of contact between the channel and surface, respectively between the car and track – it goes without saying then that not only precision but also a certain degree of adaptability is essential here. As with highly tuned racing cars our drainage systems are well thought out down to the last perfect detail.

MEA®

In close cooperation with design companies (such as Tilke) we have among others provided drainage systems for the Bahrain International Circuit and the Autodromo do Algarve race track.

**Race track Autodromo do Algarve,
Portimão, Portugal**
MEAKERB

See for yourself –
MEA always puts you in the fast lane.

**Race track Autodromo do Algarve,
Portimão, Portugal**
8.1 km MEADRAIN Supreme EN2000 and MEAKERB

With MEA Drainage, you're always on dry ground.

MEA Drainage Systems

Whether in the public, industrial or private sector, surface drainage is becoming increasingly important. When installing suitable drainage systems, both safety and aesthetic aspects need to be satisfied. Technical and visual requirements for a wide range of different terrain and loading factors need to be taken into account. By offering a comprehensive range with many possible combinations, MEA Drainage Systems provides an optimum individual and economical solution for most applications and problems.

With an impressive network in 44 countries, MEA Drainage Systems is one of the leading suppliers of linear drainage systems. A unique multi-material product range allows MEA to offer polymer concrete polyester (GRP) as a modern, light and highly stable solution, as well as galvanized and stainless steel systems. This product mix enables MEA to offer the perfect product for every application.

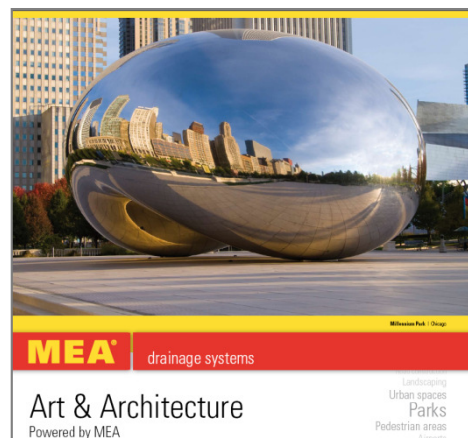

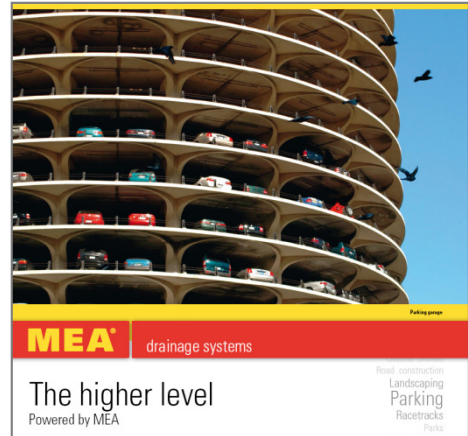

Product expertise and an awareness of local market needs have given MEA double digit export growth over the last decade. Every year over one million metres of MEA channels is installed worldwide.

Working in partnership with you, MEA offers the best solutions for airports, industrial zones and public areas, the home & garden sector, parking areas and road construction.

We ensure you're always on dry ground!
