

BAE

Architectural impact, design flexibility and outstanding fire performance made Europanel the ideal choice for claddings at BAE's impressive new European Airbus wind manufacturing facility in Broughton, North Wales. As a Welsh Manufacture, Eurobond were extremely proud of our contribution at this ground breaking new site.

Over 6000 sqm of panels were required to form the external envelope of the giant hanger. Supplied in two specific module sizes to suit the structural steel framework, they created a striking visual feature that enhanced the Architects bold design.

On the front and rear elevations the panels were installed onto a series of buttress-like protrusions, or 'plant-ons', each measuring over 40m from ground to eaves level.

The panels, supplied in Corus Colorcoat® PVDF Metallic Sliver were used to cover the main columns of the structural steel framework, concealing the service risers and some aspects of the plant.

Client: Airbus

Architect: Faulkner Brown

Contractor: Laing O'Rourke

Panel Contractor: Hathaway Roofing
