

Big Yellow

The Big Yellow Self Storage Company has used Eurobond's Europanel Lite panels as the cladding of choice for its Edmonton depot, and is planning on utilising the non combustible stone wool cored panel system on a further 19 other planned stores nationwide. Europanel, with its secret fix joint detail is the ideal cladding for an aesthetically pleasing finishing on high profile building such as Big Yellow.

Chosen for its LPS 1181 Grade A standard, Europanel has provide Big Yellow with an excellent fire resistant qualities within its building envelop. The Rockwool core used within all Eurobond's panel system ensure the panels pass the highest industries regulations. Where appropriate Eurobond's panel systems are tested and approved to BS476 Part 22, , BS EN 1364 Part 1, LPS1208, LPS1181 Grade Ext A and FM Global FM4880.

According to David Scanlon, Partner at the Mountford Pigott Partnership, the reason for choosing Eurobond was simple "Premiums in the reinsurance market increased some years ago for properties using cladding with PIR or PUR cores. It therefore made sense to specify fire resistant products from the outset that meet with insurers' requirements and don't penalise clients in the long term."
