rethinking stairs

ABOUT VULCAN

Vulcan Architectural is known for its high profile in creating Stair solutions. We add value to clients properties through the careful design and planning with practical advice. Our team is structured to assist in giving a wide range of respected blue chip client's control in their new build or re-development program. We provide the expertise to understand their goals and objectives to create clever, practical and functional walking areas.

CASE STUDY

Address	Hilsea Station
Size	Complete DDA/AFA Upgrade
Total project value	Not disclosed
Case	

For this project, the architect, working on behalf of the engineering contractor, wished to upgrade the DDA vision and AFA access to this station building and the over bridge. Using Vulcan Tread Systems, we worked closely with the bridge team, carrying out the working drawing surveys, enabling us to advise on fixing details, water drainage and installation procedures, ensuring all end results met the high standards expected. Vulcan worked carefully with the contractors, ensuring everything was on site, on time and on budget.
