

Welcome...

After a busy start to the second half of 2013, CPS is adapting itself to changing needs & requirements, which has resulted in a range of new products being launched of which you will see in this bulletin. The first half of 2013 saw the launch of the spectator seating range which has already aroused much interest. This year has seen some of our most challenging projects ever; and difficult intricate designs have become second nature to our design office. With a wealth of experience and a team of professionals on hand to help you, CPS are able to take your ideas from 'concept to completion'. We look forward to hearing from you.

The Inova seat makes its first debut in the UK

The Inova range is a new high end interactive learning solution.

The chair brings together strength versatility and fluid design. The range has a selection of outré designs and colours creating passion and vibrancy in learning spaces. The seats are available in upholstered, timber or plastic finishes and are adaptable to suit every need.

Bespoke stage brings Church's dream true

CPS put in hours of design work to create one of their most bespoke staging packages yet. The package consisted of a stage with an imposing height-adjustable lectern, mercy seats a holiness table, flag stands and collection plates. The lectern incorporated carpeted edges and LED lighting for reading and to illuminate the cross on the front.

Multi-purpose seating solution for University

A large UK university had a major overhaul of its fixed lecture theatre and auditorium seating and the project totalled over 800 seats.

The university needed a multi-purpose chair that could be used for business applications as well as a lecture theatre. CPS's core seat models, the Vario C9 lecture seat and the Asset A10 and A20 auditorium seat provided the best solution. All of these seats scored in excess of FIRA Test Level 4 Severe category use and means the University have a flexible fixed seating solution covered by our Lifetime Warranty.

CPS Hire Division

CPS Hire division has a wealth of experience in staging layouts and design. In current climates where budgets are under pressure, the hire option provides a cost effective solution to actually purchasing the stage.

Motor-Up

CPS has added one of their most exciting staging systems to the range. CPS Motor-Up is an ingenious motorised Staging System which rises flush from the floor at a touch of a button. The system presents itself as the perfect solution for companies that host different public events daily. The system once installed virtually eliminates any labour cost to rearrange the stage, and means that a hall layout can be reconstructed numerous times every day without any great effort.

Customer Feedback

I confirm that the installation of the theatre style fixed tiered seats and writing ledges in the Lecture Theatre A30 in the Arts Centre at the University was carried out effectively and to a good standard. The programme dates and cost were adhered to. The academics and students are pleased with their new learning environment. Thank you for your work. I look forward to working with you and your colleagues again. Thank you.

Auditorium installed at a prestigious school in the Lake District.

A private secondary school looking out on to Lake Windermere required a smart auditorium for their concerts, performances and assemblies.

However they incurred the problem of not having enough space for the total seating capacity needed. CPS however manufactured a seat place narrower than standard seats but still extremely comfortable and as a result extra rows of seats were fitted and the required capacity was fulfilled. They also incorporated Eyeleds® ultra-slim walkover LED lighting which act as perfect aisle guides when the lights are dimmed for performances.
