

## CASE STUDY

### Mace Living Ltd

Toptech were recently commissioned by Mace Living, to provide 192 high density cycle parking spaces within a secure cycle store at a newly constructed Student Accommodation Complex at 14 Fieldgate Street, London.

Space was of a premium, so it was decided that LONDON 2 tier cycle racks at 375mm centres would work out to be best option, given the number of concrete pillars and buttresses within the secure store. The Toptech LONDON 2 tier cycle support takes its design traits from a cyclists point of view. It not only saves space for the planners and developers, but also offers the true cyclist all of the benefits of using a Sheffield Stand, with hoops mounted on both levels for added security and cycle support. The top beam on a London, comes pre-drilled as standard and offers a choice of spacing's, from 375mm to 500mm, to accommodate cycles with baskets and child seats.

- **Single or double sided versions are available**
- **Multiple locking points for the cycle frame and both wheels**
- **Easy cycle parking**
- **Suitable for any type of cycle**
