Glow in the Dark

Heskins produces photo-luminescent materials in both conventional egress and anti slip format. Various levels of performance are produced to provide effective solutions.

Anti Slip

The world's widest range is produced, slit to any width, cut to any shape, even printed. Both abrasive and non-abrasive formats are produced.

Floor Marking Systems

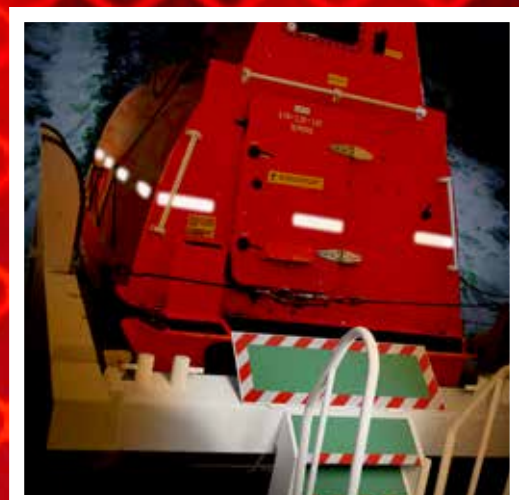

We manufacture the most durable material on the market; instantly applied and it comes with a multi year guarantee. We supply rolls and shapes which can be combined in many different ways to help manage a workplace.

REFLECTIVE TAPES

High quality self-adhesive reflective tapes for all applications

Heskins reflective tapes make it easy to highlight key features on vehicles and structures.

Bright colour choices make Heskins reflective tapes highly visible during daylight but they really shine in the dark. Glass beads or microprisms redirect light back to its source far more effectively than conventional materials making the tape appear brightly illuminated.

Reflective tapes are ideal where a viewer has a source of light, such as vehicle headlights or torches. They are often used to highlight the presence of objects where alternatives such as powered lighting or glow-in-the-dark solutions would be impractical.

- **Regulatory approvals**
- **Large range of high visibility reflective tapes**
- **Custom printed reflective tape and decals available**
- **Can be supplied printed**
- **Low price point**
- **Different shapes and widths available**
- **Extremely durable quality construction**

Easy to apply

Tough - can withstand repeated washing and winter weather

H6602 Glass bead DOT Tape

Glass bead vs micro-prismatic; what's the difference?

There are significant differences in glass bead and micro-prismatic technology.

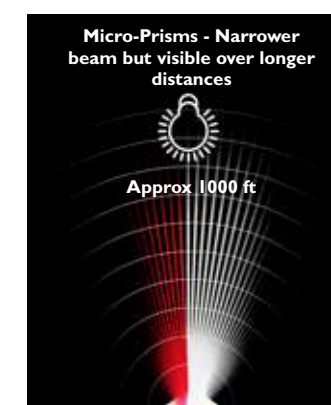

Glass Bead Reflectors

A suspended honeycomb shaped grid of glass beads are used to bend light and reflect it back to the light source.

Glass bead DOT tape is less expensive to produce than micro-prismatic tape making it more economical to buy, although it can be more time consuming to apply.

The cone of light isn't as bright at long distances as that of micro-prismatic tape but it does reflect back over a wider angle which may be preferred in some applications.

Micro-Prismatic Reflectors

Micro-prismatic DOT tape is much more efficient at reflecting light. The surface is covered in precisely formed 3 point prisms, and when the light bends and reflects inside these, it can return up to 80% of the light straight back to the source, making the reflection much brighter.

More complex manufacturing requirements does make micro-prismatic DOT tape more expensive, but it is more durable and much more effective over long distances. Micro-prismatic material is also much easier than glass bead to apply.

Colours & Sizes

Colour options vary by product. In some cases colours are dictated by the relevant standards but elsewhere, we can offer several choices.

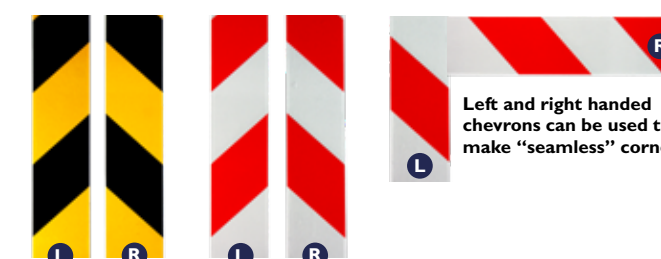

We keep high stock levels of pre-cut rolls in widths from 15mm to 1260mm, ready to be immediately shipped worldwide. Samples are available on request.

From 15mm to 1240mm wide

Left and Right-Hand Variants

We can offer these in all the different sizes that we offer our reflective hazard tapes.

Left and right handed chevrons can be used to make "seamless" corners

H6601 Reflective Marking Tape

- Mark out hazardous objects and areas
- Wide range of colours
- Roll widths from 15mm to 1240mm and up to 10m in length
- RAI approved, adhering to the high standards of reflectivity and visibility once classified as Class 2 under BS873

Reflective tape is a simple, self-adhesive, hi-vis tape, suitable for marking out potentially hazardous or dangerous areas. It can be effectively used in any environment and takes literally minutes to apply. Suitable for use for floor marking, Reflective Tape can be used on walkways, stairs and around exits to aid route finding.

H6602 DOT Tape

- Highlights vehicles to improve road safety
- Glass bead
- Made in Europe - no need to import from the US
- Red/White 6"/6" and 7"/11" pattern available
- US Department of Transport (DOT) specification for trailers and vehicles intended for operation in North and South America as well as the middle-east

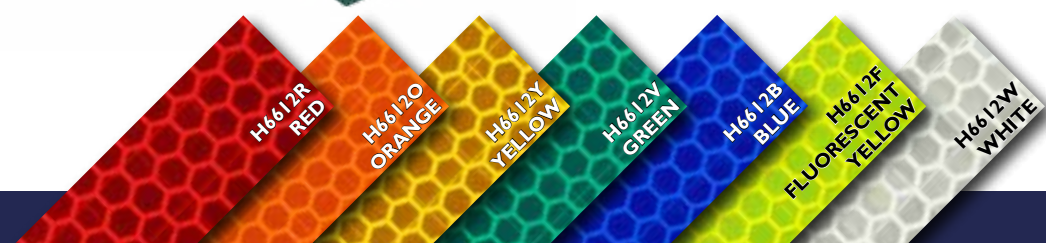

Custom printed DOT tape is a cost effective way to project your brand identity onto your fleet whilst meeting the Department of Transport mandatory requirements.

H6612 Micro-prismatic Tape

- Micro-engineered 3 point prisms on the surface
- Retro-reflective performance of 5 years
- Roll widths from 19mm to 1210mm and lengths up to 45 metres

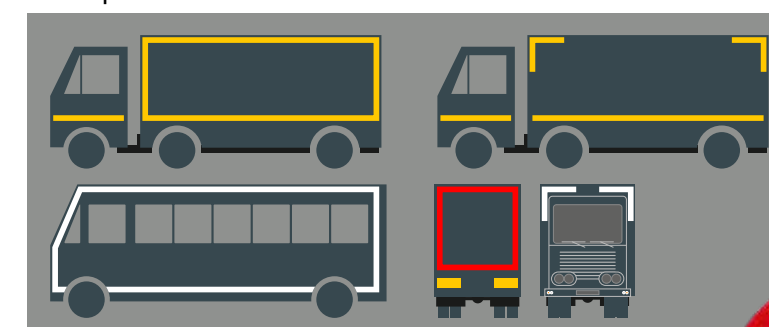

Heskins Micro-prismatic Tape is designed to be visible, day or night. Its precision-engineered prisms reflect up to 80% of light, cutting through low-light and fog. Tough, waterproof, and resistant to wear, it provides dependable performance year after year. A choice of vibrant colours and sizes, Micro-prismatic Tape is the smart solution for marking vehicles, posts, machinery, and safety zones.

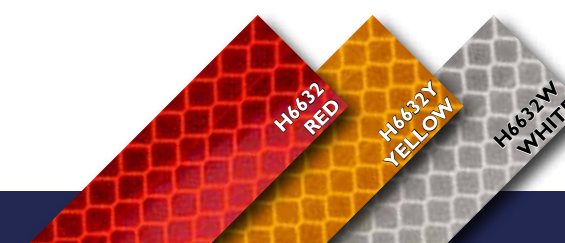

H6632 ECE104 Vehicle Reflective Tape

- Conforms with ECE104 regulations
- Micro-prismatic
- No restrictions regarding sales areas or industry

ECE tape is now available in both 50mm and 55mm width rolls.

ECE104 vehicle reflective tape is a hi-viz marking tape designed for heavy goods vehicles to conform with ECE104 conspicuity regulations. It is used to outline the rear and sides of all newly registered HGVs over 7.5 tonnes and trailers over 3.5 tonnes operating in the UK and Europe.

H6604 High-Intensity Reflective Tape

- Glass bead technology
- Reflects most of the light back to the source
- Large chevrons increase visibility
- Roll widths from 15mm to 1220mm - standard roll lengths are 45.7m
- Meets DIN 30710 , DIN 67520 and DIN 6171

A glass bead reflective tape, suitable for large vehicles, plant equipment and signs. The particularly large chevrons compared to most hazard marking tapes can be seen from a greater distance which allows for increased hazard perception.

H6672 SOLAS Reflective Tape

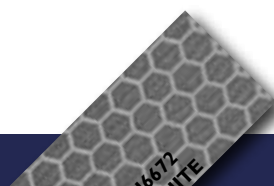

- Glass bead technology makes vessels and people visible at sea
- Improves the visibility of important signage
- Resistant to salt water
- Provides vital visibility for offshore platforms and buoys
- 360° reflective performance

Contributes to the objectives of the Safety of Life at Sea (SOLAS) regulations.

When attached to life-saving equipment like life rings, life rafts, and rescue craft, the tape aids in quick detection by searchlights in night rescue missions.

It remains effective through years of exposure to harsh marine environments without needing frequent replacements.

Heskins SOLAS Reflective Tape bonds well to a variety of surfaces including aluminium, fibreglass, and steel.

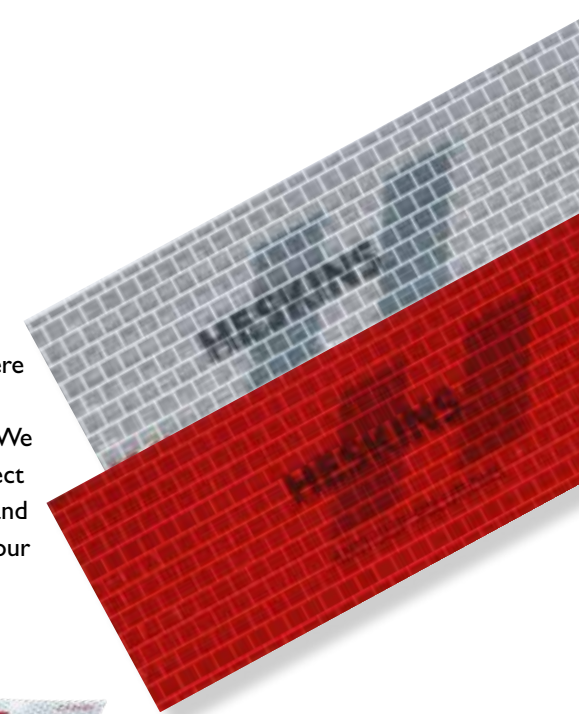

Printing

Any band, any message, any colour.
Many of our materials can be printed to make sure important information is placed exactly where it's needed.

Our experienced team is here to support you throughout the customisation process. We can help you design and select the most appropriate tape and printing options, ensuring your project aligns perfectly with your objectives.

Custom DOT tapes

Reseller Support

We're keen to support resellers both in the UK, US and across the world.

Photo Download Suite

Resellers can access our photo download area to obtain high-resolution photos for use in your online and offline marketing.

Brochures & Sample Cards

We offer brochures & sample cards either Heskins branded or unbranded for your marketing requirements.

Own Branded Packs

Many of the well known names in the market use Heskins to manufacture their reflective and non-slip tapes.. We can provide our products in almost any type of suitable retail packaging in your own brand design.

Heskins is a GSI registered company, so we can produce internationally recognised EAN or UPC barcodes if you so desire.

Custom printed brand packs for resellers
