ACO MultiDrain™ MD - Introduction to the system

ACO MultiDrain™ MD benchmarks a new approach in the planning, delivery and installation of general purpose channel drainage systems. Designed to provide an effective solution for a wide variety of applications, ACO MultiDrain™ MD system maximises functionality whilst using the minimum number of components.

ACO MultiDrain™ MD channel drainage system is manufactured from Vienite®, ACO's sustainable high strength material. It is available in three widths; 100mm, 150mm and 200mm, and has a variety of depths and slopes. The channel units are certified to BS EN 1433: 2002 Load Class D 400* and form the main components of the system.

Depending on the load class and application requirement, a wide range of gratings are available to complete the system. You can now chose from a range of traditional and discreet slot drainage gratings, solid covers and cross footpath drainage units to ensure all applications are catered for.

All gratings within the system are fitted with ACO Drainlock™, a bar-less locking device which reduces the risk of blockage and improves hydraulic capacity. The mechanism also provides for easy installation and maintenance of the system.

Applications:

- ▶ Commercial developments
- ▶ Discreet slot drainage
- ▶ Footpath drainage
- ▶ Landscaping
- ▶ Light industrial units
- ▶ Pedestrian precincts
- ▶ Private and public parking areas
- ▶ Residential developments
- ▶ Retail developments
- ▶ Sports and leisure
- ▶ Services ducts
- ▶ Schools
- ▶ Threshold drainage

Made from sustainable materials

ACO MultiDrain MD channel elements are manufactured from Vienite®. Vienite® is ACO's new high strength sustainable material that meets environmental and sustainability targets for construction products.

Vienite® utilises high levels of post consumer recycled waste, but unlike some recycled materials does not compromise on strength or long term performance.

Vienite's high strength characteristics means the material is four times stronger than traditional concrete and has a low water absorption rate. It is also resistant to freeze thaw attack and has excellent chemical resistance.

At the end of the products operational life, Vienite® can be collected, processed and returned to production as a raw material.

Problem solving drainage solution

ACO MultiDrain™ MD can provide a drainage solution for more specific and challenging applications.

Discreet slot, threshold and cross footpath drainage solutions can be supplied by selecting the appropriate channel, grating and accessories. Drainage solutions for these specific applications are detailed towards the end of this brochure.

ACO MULTIDRAIN MD IS SUITABLE FOR THE FOLLOWING APPLICATIONS:

Installation group	Load Class	Maximum Test Load (kN)	Vehicle	Typical Uses
1	 A 15	15	Pedestrians and Cycles	Pedestrian, cycleways and domestic drives
2	 B 125	125	Cars and Vans	Pedestrian precincts, light vehicles, private car parks and drives
3	 C 250	250	Light Commercial Vehicles	Parking areas, service stations (cars) and slow-moving light commercial vehicles
4	 D 400	400	HGVs	Parking areas for all types of vehicles*.

*The ACO MultiDrain™ MD system is not suitable for carriageways of public roads or motorways.

ACO MultiDrain™ MD System

Technical Data

Channel range layout

To support a wide variety of catchment depths, hydraulic capacities and applications, the system is available in three channel widths, 100mm, 150mm and 200mm and has a range of constant depths, shallow depth and sloping depth channels to suit the drainage design.

The layout below illustrates the channels and accessories available within the ACO MultiDrain™ MD range and to aid product selection, a summary of the function and feature of each component is provided.

All ACO MultiDrain™ MD channels can be purchased with galvanised or stainless steel edge rails.

Further details can be found on pages 6 – 33 of this brochure.

1 Shallow depth channels

- ▶ **100mm wide bore:** Four shallow channel units are available in 1m lengths with an overall depth of 75mm or 100mm.
- ▶ **150mm wide bore:** One shallow channel unit is available in 1m length with an overall depth of 100mm.
- ▶ **200mm wide bore:** One shallow channel unit is available in 1m lengths with an overall depth of 100mm.

Standard option available includes vertical cast-in TPE seal for connection to Ø110mm pipework.

2 Constant depth channels

- ▶ **100mm wide bore:** Four constant depth channel units are available in 1m lengths with overall depths ranging from 150mm to 300mm.
- ▶ **150mm wide bore:** Three constant depth channel units are available in 1m lengths with overall depths ranging from 210mm to 310mm.
- ▶ **200mm wide bore:** Three constant depth channel units are available in 1m lengths with overall depths ranging from 265mm to 365mm.

These channels include a vertical knockout for connection to Ø110mm (100mm wide bore channels) or Ø160mm (150mm and 200mm wide bore channels) pipework.

3 Constant depth channels – 0.5m

- ▶ **100mm wide bore:** Four 0.5m constant depth channel units are available with overall depths ranging from 150mm to 300mm.
- ▶ **150mm wide bore:** Three 0.5m constant depth channels with overall depths ranging from 210mm to 310mm.
- ▶ **200mm wide bore:** Three 0.5m constant depth channels with overall depths ranging from 265mm to 365mm.

These channels include vertical knockout for connection to Ø110mm (100mm wide bore) or Ø160mm (150mm and 200mm wide bore) pipework and side knockout for 90° channel connections.

4 Universal Sump

Each system width has one 0.5m universal sump for connection to all channels. Outlet options for Ø110mm and Ø160mm pipes and foul air traps. Plastic silt bucket provided with each unit.

5 Sloping depth channels

▶ **100mm wide bore:** Twenty 1m sloping channels with 0.5% fall in depths from 150mm to 250mm.

6 Universal gully

One universal gully for all applications and channel widths from Load Class A 15 to D 400.

7 Multifunctional end cap

One plastic universal end cap for each channel width. Provides a closing or outlet option to Ø110mm (100mm wide bore channels) or Ø160mm (150mm and 200mm wide bore channels) pipes.

8 Step Connector

A polymer concrete unit which helps provide smooth water transition between constant depth channels when used in a stepped system design. The step connector is suitable for the 50mm step between each of the constant channel depths.

Guidance for using the ACO MultiDrain™ MD parts tables

The ACO MultiDrain™ MD parts tables are shown on the following pages. The product information is split down by channels widths and further by channel depth and edge rail type. This is to enable quick and simple product identification and selection.

The tables for ACO MultiDrain™ MD channels list a number associated with the Invert Type. This number highlights the drainage design which can be achieved when using these channels. The key for the Invert Type is shown opposite.

Channel invert types

1 Constant Depth Invert

2 Sloping Invert

3 Stepped Invert

ACO MultiDrain™ MD System

Technical Data

ACO MultiDrain™ M100D channels with UltraSTEEL™ galvanised edge rails.

ACO MultiDrain™ M100D channels are manufactured from Vienite®, ACO's sustainable high strength material, which provides high chemical resistance. The channels are available in constant depth, sloping depth and shallow depth units.

ACO MultiDrain™ M100D channels listed below are provided with integral galvanised steel protective edge rails. For enhanced durability these rails are manufactured from UltraSTEEL™, a unique material that has improved strength over plain steel.

The added benefit of UltraSTEEL™ is that its greater surface area improves the bond between rail and adjacent material where a sealed system is required.

For the ACO MultiDrain™ M100D range of gratings to suit these channels please refer to page 10 and 11.

Constant and sloping depth channels with UltraSTEEL™ galvanised edge rails

Gully Pot supplied by others

Connector No 615

Note: Plain U-PVC 150mm – 160mm Supersleeve adaptor supplied with 601, 602 and 605 assembly.
Grating slot width 19mm. For information on the universal gully functionality see page 37.

ACO Drainlock™ Gratings

Grating selection

All channels within the ACO MultiDrain™ MD range are certified to BS EN 1433: 2002 Load Class D 400. The system has a wide range of gratings suitable for use in a variety of applications from Load Class A15 to D 400. Refer to the chart on page 3 for load classes and typical applications. Please note when selecting a grating careful consideration should be given to the application requirement. Each grating has a certified load class which, once installed with the channel, determines the system's load class.

ACO Drainlock™

Fitted as standard to ACO MultiDrain™ MD gratings, this fast locking device removes the need for bolts and bars and improves the channels hydraulic capacity. The Drainlock™ mechanism simply clips into the channel edge rail for rapid installation. An installation guide is shown opposite.

Anti-shunt mechanism

A selection of the ACO Drainlock™ gratings are fitted with an anti-shunt mechanism that restricts unwanted grating movement when installed. This feature improves the durability and the aesthetics of the system. See figure 2 for details

Security Locking

In areas such as schools and prisons, where unwanted grating removal needs to be restricted, a security locking can be used in conjunction with the following gratings; on ACO M100D, 12680 and 23405 on ACO M150D, 23161 and on ACO M200D 23221. The system is fitted to the gratings by two M6 security screws and clamps the grating in place preventing removal. See figure 5 & 6 for details. Security locking key for installation and removal supplied separately.

Fitting the grating

1 To install, align the grating onto the channel

2 Align anti-shunt detail with recess

3 Push or stand on the grating until it clicks into place

4 ACO Drainlock™ locking mechanism fastens into channel

Security locking

5 Fix the M6 security screws and clamp the grating as shown.

6 Place grating into the channel and tighten the fixing using the security locking key

Removal of grating

7 Insert tool as shown. Drainlock lifting tool available part no 1367

8 Pull upwards to unlock grating

ACO MultiDrain™ MD System

Technical Data

ACO MultiDrain™ M100DS channels with stainless steel edge rails

ACO MultiDrain™ M100DS channels are manufactured from Vienite®, ACO's sustainable high strength material, which provides high chemical resistance. For improved aesthetics and performance, the channels listed below are provided with integral stainless steel (Grade 304) protective edge rails.

These channels are available in constant depth and shallow depth units.

For the ACO MultiDrain™ M100DS range of gratings to suit these channels please refer to page 14.

Constant depth channels with stainless steel edge rails

ACO MultiDrain™ M150D channels with UltraSTEEL galvanised edge rails

ACO MultiDrain™ M150D channels are manufactured from Vienite®, ACO's sustainable high strength material, which provides high chemical resistance. The channels are available in constant depth and shallow depth units.

ACO MultiDrain™ M150D channels listed below are provided with integral galvanised steel protective edge rails. For enhanced durability these rails are manufactured from UltraSTEEL™, a unique material that has improved strength over plain steel.

The added benefit of UltraSTEEL™ is that its greater surface area improves the bond between rail and adjacent material where a sealed system is required.

For the ACO MultiDrain™ M150D range of gratings to suit these channels please refer to page 17.

Constant depth channels with UltraSTEEL™ galvanised edge rails

Problem solving drainage solutions: Discreet slot drainage

ACO MultiDrain™ MD has a range of gratings to complement installations which require discreet slot drainage.

Designed as standard with a heelguard 10mm off set drainage inlet, ACO Brickslot is a subtle and unobtrusive grating which when combined with an ACO MultiDrain™ MD channel, can be used as a solution to complement discreet drainage applications and is ideal for use against buildings facades.

Compatible with most paving materials, the vertical sides of the grating enable pavements to be laid directly to the unit's edge. Once installed the system is totally secure and not vulnerable to vandalism or loose grates making it a suitable for applications such as schools and playgrounds where grating removal can become a hazard.

The channel and ACO Brickslot grating together provide an unobtrusive continuous slot drainage system, with high hydraulic efficiency for fast removal of surface water. ACO Brickslot gratings are available in galvanised or stainless steel and suitable for use with the 100mm and 150mm wide channels in the ACO MultiDrain™ MD range.

The system includes an ACO Brickslot access unit to ensure easy maintenance and access to the drainage system, and is also fully compatible with the range of ACO MultiDrain™ MD accessories.

The system is suitable for applications up to and including Load Class D400 (This product is not suitable for carriageways of public roads or motorways).

Applications

- Commercial developments
- Landscaping
- Level threshold drainage
- Pedestrian precincts
- Retail developments

ACO MultiDrain™ MD System

Technical Data

Discreet slot drainage

The ACO Brickslot gratings are available in two material finishes, hot-dipped galvanised and stainless steel (Grade 304), to suit the ACO MultiDrain™ 100mm and 150mm wide channels.

The off set grating has a heelguard 10mm drainage inlet, which is compatible with most types of pavements, setts, block and flags up to a maximum of 100mm depth.

The ACO Brickslot gratings are listed in the charts below and are sold separately to the channel units. For information on the ACO MultiDrain™ M100D/M100DS and M150D/M150DS channels, please refer to pages 6 to 19.

ACO MultiDrain System

Technical Data

The ACO Brickslot grating system has an access unit for easy maintenance and cleaning of the drainage system.

The access unit is positioned within the channel; it has a removable tray section which is lifted out of the frame by a lifting tool to gain access to the system.

The access unit is 0.5m in length and is available in the galvanised and stainless steel finishes and is suitable for use with any ACO MultiDrain™ M100D/M100DS and M150D/M150DS wide channels.

The unit has a heelguard 10mm off set drainage inlet, providing continuous aesthetic and drainage performance once installed with the drainage system.

The ACO Brickslot access units are listed in the charts below and are sold separately to the channel units. For information on the ACO MultiDrain™ M100D/M100DS and M150D/M150DS channels, please refer to pages 6 to 19.

Channel footpath drainage

Specifically for use where roof drainage from down pipes is required to cross the footpath into the road gutter, ACO MultiDrain™ M100D/M100DS systems has a range of accessories to construct a footpath drainage system.

This system is suitable for Load Class D 400 applications

The ACO MultiDrain™ M100D/M100DS system includes a range of accessories which provide a drainage solution ideal for areas where down pipes from roofs and gutters exit on to the pavement. The ACO Channel Footpath drainage system effectively carries water away from paved areas and across into the adjacent carriageway.

The system uses ACO MultiDrain™ M100D/M100DS shallow depth channels and has two types of kerb outlets and down pipe connectors to suit application requirements.

Shallow channels

ACO MultiDrain™ MD shallow depth channels are available in two sizes, 75mm and 100mm total depths (ACO M100D / M100DS 075 and ACO M100D / M100DS 0100) and have the option of galvanised or stainless steel edge rails.

Downpipe connectors

Two down pipe connectors are available to suit channel depth. Manufactured from grey polymer concrete the down pipe connector has a clear opening of Ø75mm and connects to down pipes with outside diameters of up to 82mm.

Kerb outlets

Two outlets are available to suit the kerb profile of the application, a CFD half battered kerb outlet to suit standard HB kerbs and a CFD Bull nose kerb outlet to match BN kerbs. Manufactured from grey polymer concrete the kerb outlets allow rainwater to discharge into the road gutter from this system.

Gratings

Traditionally solid ductile iron covers are selected in channel footpath drainage applications but all ACO MultiDrain™ M100D/M100DS gratings are suitable for use with this system. The system's load class rating is determined by the grating selected, further information of gratings within the range can be found on pages 9-14.

ACO MultiDrain™ MD Accessories - features, functions and benefits

Channel base knockout details

All ACO MultiDrain™ MD constant depth channels in the height range 0.0 to 30.0 are supplied with a pre formed knockout detail in the base of the channels. This knockout detail positioned at the male end of the channel allows a vertical connection to be made from the channel to a Ø110mm (100mm wide bore) or Ø160mm (150mm and 200mm wide bore) U-PVC pipe system. The knockout detail on the base of the channel is indicated by a "hammer" symbol. The method of removal and pipe connection is described below.

Knockout detail.

FUNCTIONS:

Step 1: Pre formed knockout detail

Step 2: Support channel around knockout detail by placing the channel on sand or soft earth for example. Tap the knockout panel from the side indicated by the Hammer symbol to remove panel.

Step 3: Push fit pipe into recess provided and seal as required. For recommended sealants refer to the section headed "watertight sealing".

Channel side wall connection detail

An additional feature provided on all 500mm long channels are removable side wall panels, which allow channel runs to be connected together to form "T" or "L" junctions for continuous water flow through the system. Where channel connections are to be made to the side wall of these units a female joint detail is provided to aid alignment and fast installation.

Removable side wall panel.

FUNCTIONS:

Step 1: Using a disc cutter as shown, cut a cross into the panel provided. Ensure cuts extend to but not beyond the perimeter recess surrounding the removable panel.

Step 2: Tap segments of panel between the cuts to remove the panel.

Step 3: Use a chisel to tidy up any remaining material. Channel connection can now be made and sealed as required.

Shallow Channels

The ACO MultiDrain™ MD shallow channels are available in either 75mm or 100mm overall depths. These units are ideal for use where installation depths are restricted such as in structural slabs, bridge decks and roofs. All units can be sealed for watertight installations as each unit is supplied with a preformed sealant groove (see section headed watertight sealing for further details).

The shallow channels identified with a "V" such as the 075V and 0100V units have a cast-in triple lipped seal in their base for push fit watertight connections to Ø110mm U-PVC pipe. These triple lipped seals are manufactured from SEBS-TPE have excellent chemical, UV and weather resistance.

FUNCTIONS:

Step 1: Ensure Triple lipped seal and pipe spigot are clean and free from debris.

Step 2: Lubricate joint faces as required and push fit pipe into the seal. The pipe is fully fitted when the end of the pipe is flush with the internal base of the channel.

ACO MultiDrain™ MD System

Technical Data

Step connector

Each width of MultiDrain™ MD has available a step connector manufactured from polymer concrete. This unit is used between constant depth channel joints where a stepped fall channel installation is required and takes up the 50mm height difference between units. The step connector ensures a smooth water flow within the channel system.

FUNCTIONS:

Step 1: Place step connector into the base of the deeper channel to be jointed as shown.

Step 2: Push channel joint together to lock step connector in place forming a smooth transition between units as shown.

Watertight sealing

ACO MultiDrain™ MD channels are generally installed without a particular water seal. Once butt jointed and with a concrete surround a fairly watertight installation is achieved. If however a water tight system is required each MultiDrain™ MD channel is provided with a sealant groove allowing the system to be sealed by the application of a flexible sealant either during or following installation. For rainwater applications we recommend a single component, polyurethane based elastomeric joint sealant such as BASF Masterflex 472 or Sika Sikaflex 11FC or similar.

Application of sealant to be in accordance with the sealant manufacturers recommendations, but for guidance a typical method of application is as follows.

FUNCTIONS:

Step 1: Jointing faces of the channels to be sound and cleaned to remove all loose material, dust, oil and grease. This can be done by the use of a wire brush.

Step 2: Butt joint the channels & install as per ACO installation instructions. Ensuring joints are still clean (surfaces can be damp but no water droplets should be evident) apply sealant with a cartridge gun approximately 5mm thick to the end face of the channel & completely fill the sealant groove. Note this type of channel can be sealed either at or following installation.

Step 3: Wipe excess sealant from the inside faces of the channel & inspect sealant groove to ensure it has been fully filled with sealant. Leave sealant to cure before use as per the sealant manufactures recommendations.

Multifunctional endcap

A Multifunctional endcap is provided for each channel width that is designed to be used with all channel heights in each range. Manufactured from polypropylene these versatile endcaps can be adjusted on site to perform the function of a closing endcap or as an inlet/outlet endcap for connection to Ø110mm (100mm wide bore) or Ø160mm (150mm and 200mm wide bore) U-PVC pipe.

Cutting guide

Removable knockout panel

FUNCTIONS:

Closing endcap: The end cap supplied fits directly to the deepest channel within the system. All other channel heights can be accommodated by simply cutting the end cap to suit. A cutting guide is printed on the front of the end cap plate. The end cap is fastened to the channel by two clips and can be connected to either male or female channel end.

Adjusting end cap.

Fitting end cap to channel

Inlet & Outlet end cap: The end cap has a knockout panel which can be removed with a hammer. Once fitted to the channel the end cap performs either an inlet or outlet function and is designed to provide a connection to Ø110mm (100mm wide bore) or Ø160mm (150mm and 200mm wide bore) U-PVC pipes.

Removing knockout panel

Pipe connection to end cap

Sump unit

A polymer concrete chamber unit which provides the capacity to hold water and silt, and also provides an outlet for the channel system.

FUNCTIONS:

Step 1: Triple lipped seals for watertight connections

Step 2: Unit wall ends can easily be removed using knife or saw

Step 3: Two knockouts for Ø110mm and Ø160mm pipe connections. For knockout removal refer to method stated on page 35 headed 'Channel side wall connection detail'.

Roddable foul air traps

A drain connector available in Ø110mm and Ø160mm for connection to foul or combined drainage. Foul air traps come complete with removable bung for rodding and are manufactured from highly durable recyclable MDPE.

FUNCTIONS:

Step 1: Push the foul air trap into place.

Step 2: Bung can be removed for rodding

ACO Universal gully

A recycled plastic & ductile iron modular system purposely designed for use with ACO channel drainage systems up to 200mm internal width. The system provides a high capacity for retaining water and also an outlet for the drainage system.

FUNCTIONS:

Step 1: Once installed ACO Universal Gully can be cut to match channel depth

Step 2: The cut ACO Universal Gully matches the profile of the ACO MultiDrain™ MD channel.

Note: Full installation details are available to download from www.aco.co.uk

ACO MultiDrain™ MD System

Technical Data

Design method

ACO MultiDrain™ MD channels are available in three widths (100mm, 150mm and 200mm) and each width is available in several depths of constant invert channel. The channels can be in runs of constant invert depth (Type 1) or in a stepped series of invert depths (Type 3). The 100mm wide M100D channel is also available with a pre-sloped invert to form channel runs of 0.5% invert slope at up to 20m length (Type 2). The run lengths of pre-sloped invert can be extended by lengths of constant invert channel.

The channels may be laid with the gratings level. If there is some longitudinal fall, then the hydraulic capacity will be increased, allowing greater spacing between outfalls.

The hydraulic capacity of channels accepting lateral inflow all along their length can be calculated by the analysis of the differential equations for spatially varied flow, a procedure that requires a computer program such as the proprietary ACO Hydro software.

For detailed designs using Hydro, please contact the ACO Water Management Design Services team. The team may also be consulted for advice where the inflow is not uniformly distributed along the channel and for channels with pre-sloped inverts.

The tables on the following page have been produced from the ACO Hydro software to facilitate a quick manual design method for the determination of the drainage requirements. The columns of drainage catchment area ($A \text{ m}^2$) are based on a rainfall intensity of 50mm/h, but can be adapted for use at any rainfall intensity. The columns of maximum flow rate ($Q \text{ l/s}$) and maximum lateral inflow ($q \text{ l/s/m}$) can be used at any rainfall intensity. The table of sloping invert channel capacities can be used for the design of M100D sloping invert channels.

DESIGN EXAMPLE

For a design of MultiDrain™ M100D, assume the following figures:

$D = 34\text{m}$ (depth of catchment area)

$L = 45\text{m}$ (length of channel run = length of catchment)

$i = 50\text{mm/h}$ (design rainfall intensity)

Ground slope = 0%

Note that any other rainfall intensity may be used. Typical intensities (from BS EN 752) are 50mm/h for areas where some ponding could be tolerated for a few minutes after heavy rainfall, or 75mm/h where ponding cannot normally be tolerated.

1. Determine the area

$$\text{Area} = L \times D = 45 \times 34 = 1530\text{m}^2$$

For a quick analysis, see the tables and the columns for Area.

1530m² is too large for one 45m run of ACO MultiDrain™ M100D

$$\text{Try } 1530 \times 1/2 = 765\text{m}^2$$

$$L \times 1/2 = 23\text{m}$$

Estimating between the rows for 20m and 30m lengths

One 23m run of ACO MultiDrain™ M100D 20.0 can drain approx 800m²
Hence two runs can drain the 1530m²

Or for a more detailed analysis, determine the total flow rate, as follows

2. Determine total flow (Q)

$$Q = (\text{Area} \times i) / 3600 = (1530 \times 50) / 3600 = 21.3 \text{ l/s}$$

3. Determine lateral inflow (q)

$$q = Q / L = 21.3 / 45 = 0.473 \text{ l/s/m}$$

4. Determine suitable channel sizes and lengths

For example, would a sump at 1/3 length work with a lateral inflow of 0.473 l/s/m?

1/3 L = 15m, ACO MultiDrain™ MD 10.0 will be adequate

2/3 L = 30m, ACO MultiDrain™ MD 30.0 will be adequate

5. Check Outlet capacity

Ensure that the proposed outlet has sufficient hydraulic capacity by reference to the product technical pages.

6. Solutions

Three options are sketched (right). There are other options, including M100D sloping invert channels or a 45m length run to an outfall using M150D 20.0 channels.

Option 1

Option 2

Option 3

X Denotes sump unit

Hydraulic Performance Tables (for lateral flow)

Notes for ACO MultiDrain M100D Hydraulic tables

Maximum capacities for each constant depth channel, assuming uniform lateral inflow to the channel.

Q (l/s) is the maximum total flow that the channel can carry.

q (l/s/m) is the maximum possible lateral inflow.

The maximum possible catchment depth is $q \div i$, where i is the rainfall intensity in l/s/m².

A (m²) is the maximum area that can be drained at a rainfall intensity of 50mm/h (0.014 l/s/m²).

At other rainfall intensities, the area can be determined by proportion, e.g. at 75mm/h, the maximum area drained will be the tabulated area x 50/75.

ACO Water Management Design Services Team

Please contact the ACO Water Management Design Services Team on 01462 816666 for advice on channels with stepped or sloping inverts, channels with non-uniform inflow, or channels receiving point inflows at the end or at intermediate locations.

The ACO Water Management Design Services Team will be pleased to assist with any technical queries, scheme designs or parts schedules.

NB Constant invert depth channels can be used to extend the channel length. Please contact ACO Design Services team.

Notes on table usage

This table may be used for MultiDrain™ M100D sloping invert channels. The table shows capacities for runs outfalling to sumps through units 5, 10, 15 and 20, although any unit can connect to the sump and their capacities can be estimated by interpolation.

It is assumed that the gratings are laid level. Where the run is laid with a longitudinal ground slope, the capacities can be considerably increased, or the length to outfall extended. Please contact ACO Water Management Design Services team.

Notes for ACO MultiDrain M150D Hydraulic tables

Maximum capacities for each constant depth channel, assuming uniform lateral inflow to the channel.

Q (l/s) is the maximum total flow that the channel can carry.

q (l/s/m) is the maximum possible lateral inflow.

The maximum possible catchment depth is q_s/i , where i is the rainfall intensity in l/s/m².

A (m²) is the maximum area that can be drained at a rainfall intensity of 50mm/h (0.014 l/s/m²).

At other rainfall intensities, the area can be determined by proportion, e.g. at 75mm/h, the maximum area drained will be the tabulated area x 50/75.

Installation details

CHANNELS WITH TRADITIONAL GRATINGS

Asphalt Pavement

Concrete Pavement

Block Pavement (option 1 and 2)

BRICKSLOT GRATINGS

1.0 Ground Conditions:

The customer should ensure that the minimum dimensions shown are suitable for the existing ground conditions. Engineering advice may be required.

2.0 Block Pavements:

The channels must be supported laterally and therefore blocks must be restrained from movement by bedding securely, e.g. by using an Epoxy or Polymer Modified Mortar for bed and perpendicular joints (for example RONAFIX Mortar Mix C or similar). Engineering advice may be required.

3.0 Surface Cracks:

Alternate crack control and movement joints transversely within bed and haunch may reduce unsightly surface cracking. Engineering advice may be required.

4.0 Joint Sealant:

Where ACO channel joints and fittings are to be sealed (where used in foul water applications or where impermeability is required, for example) contacting a sealant specialist for guidance on the most appropriate sealing compound to use.

5.0 Surface Protection:

In asphalt pavements avoid contact between compaction equipment and channel/grating. This may be achieved by ensuring that the finished surface level lies above the grating level (by at least 3mm). Stones should be removed from grating prior to laying/rolling wearing course.

6.0 General Installation Notes:

See ACO drawing E1-E01-003 for general notes on installation. This information is available on request.

7.0 Minimum Dimensions of Concrete Surround:

*e.g. parking areas for all types of road vehicle.
Not suitable for carriageway of roads or motorways.

**Note dashed line printed on edge rails 35mm below top.

Load Class		A 15	B 125	C 250	D 400*
	x	100	150	150	200
	y	Full channel height (Less Y2 where necessary)			
Minimum Dimensions (mm)	z	100	150	150	200
	Y2**	35	35	35	35
Maximum Dimensions (mm)	Y3	100	60	60	60

8.0 Grating Security Locks:

All the gratings are held in the channel units by the Drainlock fixing. In addition, gratings type 23405 (Cast Iron) and 12680/12682 (Composite) can be locked in place with an optional security locking kit. See installation drawing E1-E01-040-3.

ACO MultiDrain™ MD System

Technical Data

Chemical resistance chart

Vienite®, ACO's sustainable high strength material, has a high resistance to dilute acids and alkalis, and are unaffected by road salt, fuel and oil, and other commonly encountered chemicals.

Further details of the chemical resistance can be obtained from the ACO Water Management Design Services team or, for particular chemicals, samples of the polymer concrete can be supplied to customers for their own testing. The chemical resistance will also depend on the temperature of the effluent. Clean water should not exceed 80°C.

The resistance of the gratings and edge rails should also be considered, and stainless steel gratings and edge rails are available in the ACO MultiDrain™ MD system for aesthetically pleasing installations and for specific chemical resistance.

This chemical resistance chart refers to chemicals at ambient temperatures (20°C) and the results are for general guidance only.

Chemical medium	% conc	Resistance: Polyester concrete
Acetic acid, glacial	100	No
Acetic acid	10	Yes
Acetic anhydride	100	No
Acetone	10	No
Acetone	100	No
Alum	100	Yes

Xylene	100	Yes
Zinc sulphate	100	Yes

Specification clause

The surface drainage system shall be ACO MultiDrain™ (Insert channel description as appropriate e.g. ACO M100D) channel system as supplied by ACO Technologies plc; all materials and components within the scope of this channel system shall be obtained from this manufacturer. The system shall be CE marked and fully compliant with BS EN 1433:2002, certificated to Load Class (*) as defined in BS EN 1433:2002.

A Declaration of Conformity shall be supplied to the Supervising Officer upon request. The system shall be of (100mm†, 150mm†, 200mm†) nominal internal width, manufactured in Vienite®, ACO's sustainable high strength material with cast-in (galvanised/stainless†) steel edge rails. The channels shall be installed with manufacturer's grating appropriate to the specified Load Class and locked securely in place using the manufacturer's Drainlock® boltless locking system.

The system shall be installed in accordance with the manufacturer's printed instructions, and the work carried out as specified in drawing no. (... ..) and in accordance with recognised good practice. Standards of workmanship shall generally be as specified in BS EN 752 and BS 8000:Part 14:1989.

† delete non-appropriate information

* insert information C 250 or D 400 as appropriate

Recycled content

ACO Technologies aim to incorporate as much recycled material or waste material as is practicable in their manufactured products. Typically, cast iron materials contain 40% to 90 % recycled iron, and steel products contain 25% to 33% % recycled steel. The total recycled content of each product in the ACO MultiDrain™ MD system will vary as the proportion of the different materials (in channels, edge rails, gratings etc) varies. As an example, ACO MultiDrain™ MD channels with Heelguard™ ductile iron gratings will contain approximately 27% by weight recycled material.

The ACO MultiDrain™ MD products are themselves intended for a long life with low maintenance, to reduce the need to recycle, but when eventually they are no longer needed, much of their content can be readily recycled with a very low risk of pollution to the environment.

NBS Specifications

ACO MultiDrain™ MD should be specified in section Q10:180. Assistance in completing this clause can be found in the ACO Water Management entry in NBS Plus, or please contact the ACO Water Management Design Services Team.

Note: A specification in NBS format is available to download from www.thenbs.com or www.aco.co.uk

CE Conformity

The ACO MultiDrain™ MD System is fully certified and CE Marked to BS EN 1433:2002.

Test certificates and a declaration of conformity are available on request, please contact ACO Water Management Design Services Team on 01462 816666 for further information.

General information

ACO products are subject to weight and dimensional tolerances. The weights and dimensions shown in this document are for guidance purposes only. ACO products are made from naturally occurring materials and may be subject to variations in colour, texture and marking. These aesthetic variations do not affect the performance or functionality of our Goods. The appearance of products shown in our company documentation are for illustration purposes only.
