

## Technical Data

Concrete reinforcement

### **Composition and manufacture**

Shear load connectors: Transfer shear across movement joints in concrete. Design program available.

Punching shear reinforcement: Ancon Shearfix double-headed studs locate around a column head to reinforce against punching shear. Design program available.

Insulated balcony connectors: Ancon Isolan® provides a thermal break between external concrete balconies and internal concrete floor slabs and provides continuity to reinforcement.

Special fabrications: special stainless steel fabrications can be produced to meet the requirements of any application and any industry including water treatment, infrastructure and petrochemical.

Reinforcement Continuity Systems: Eazistrip reinforcement continuity systems maintain continuity of reinforcement at concrete construction joints. Formwork design is simplified and there is no need to drill shuttering.

Reinforcing Bar Couplers: The use of Ancon reinforcing bar couplers can simplify the design and construction of reinforced concrete, reducing the amount of reinforcement required. A comprehensive range is offered.
