Why ArmaSport® mats are better!

Health in every pore

Take responsibility for the health of exercisers! ArmaSport® mats are free from phthalate plasticizers and triclosan. Because harmful phthalate plasticizers and aggressive antibacterial additives are a hazard to both health and the environment. Unfortunately many sports mats contain precisely these dangerous materials. ArmaSport® mats are the healthy exception! And, importantly for allergy sufferers, they don't contain latex.

Stability in millions of cells

Quality is in the detail. Instead of simple air bubbles, millions of polygonal, air-filled cells provide a complex structure. This is the secret behind the unique combination of elasticity and stability provided by ArmaSport® mats. Metaphorically speaking: instead of being like loose pebbles (air bubbles), these air cells have the strength of interlocking plaster stones. This guarantees stability for lateral movements and a firm footing - even during the most intensive exercise.

The point is shock absorption

Excellent point-elasticity and joint-friendly shock-absorption can be measured objectively. The maximum braking acceleration for ArmaSport® mats is below the permitted standards (80 m/s² for type 1 mats, for exercises without jumps /65 m/s² for type 2 mats, for exercises with jumps). All ArmaSport® mats are ideal for professional use – in schools, for exercise and in competitions (tested in accordance with DIN EN12503 and the TÜV GS certificate for approved safety)

Hygiene without compromise

The difference shows in continuous use. Due to their closed-cell structure ArmaSport® mats do not absorb moisture. The sanitized treatment provides reliable, permanent protection against bacteria and fungal growth, without the use of triclosan. The mats are sweat- and saliva-proof and are easy to clean with water (DIN 53/80-1 and -2)

Mats. The foundation for fitness.

For a stimulating workout – on really healthy mats.

ArmaSport® mats offer two-fold protection: for your personal health and for the environment. They are free from hazardous phthalate plasticizers and aggressive triclosan. They do not contain latex – a benefit for all those who suffer from allergies or sensitivity to latex.

Systematic storage. Easy and hygienic.

The high-quality loop. It makes storage wonderfully simple. In the core is a metal ring which bears the full weight and is covered with a soft rubber material. You will not feel the loop, it does not impair the workout and there is no risk of injury. The elegant, slightly grooved surface is typical for all our mats. It not only looks good but is practical too: the mats do not stick together during storage, but have constant hygienic ventilation.

Wall-mounted mat holder

Keeps the mats tidy and simultaneously presents them attractively in studios and professional practices. The extremely sturdy holders are available for mat widths of 60 cm or 80 cm and take up to 10 mats. Front: **laminated wood**.

Transfix mat trolley

Compact, practical, hygienic and flexible – the mat trolley is all of that! All Transfix mat trolleys are made of stainless steel, are extremely sturdy and, of course, are on rollers. They can take weights of up to 150 kg and can be adjusted to **mat widths of 60 cm or 80 cm**.

ArmaSport® Transfix MM*

190-90-66 (H-W-D), Weight 17 kg

Capacity 30 mats with loops

ArmaSport® Transfix MM*

Mat bag

Take your own mat with you wherever you go. The mat bag is ideal for transporting single mats. Thanks to the double strap it can be carried comfortably – like a rucksack. It is available for **mat widths of 60 cm or 80 cm**.
