

Coursing Blocks – Ashlite, Lignacite GP, Lignacrete, Lignacite - SAVE TIME AND MONEY

Coursing Blocks are available for use in bonding and infill to ensure that a uniform thermal performance is achieved throughout the wall. Their use will save time and money by reducing the need for on-site cutting of full sized blocks, reduce waste and improve productivity. Compared to conventional brick size coursing units, Coursing Blocks are larger, meaning fewer units need to be laid and less mortar is used.

Coursing Blocks will also eliminate the risk of differential movement which can be caused when different materials are used in the same wall.

Applications

- Infill above doors and windows
- Coursing at floor and ceiling level
- Making up between joists
- High strength walls – unit strengths up to 30N/mm² in the Lignacrete range

Range and sizes

To provide maximum flexibility, Coursing Blocks are available in 65mm and 140mm bedding heights. The standard range of Coursing Blocks including block types, block sizes and pack sizes are shown in The Table. Enquiries are invited for alternative size units.
