

Commulite are partnered with Lumicom, the UK's leading independent not-for-profit WEEE Compliance Scheme set up to specifically serve the lighting industry. All Commulite components are individually bar coded and at the end of their working life they are returned to us for recycling by Lumicom at no extra cost.

Commulite is committed to providing safe and comfortable living environments for families now and in the future. We provide the most reliable and robust emergency lighting system on the market with 9 hours of emergency capacity to safely get residents through the night.

Not only that, but when you have a Commulite system installed we'll also take care of the old fittings removed from your buildings. These are collected and recycled by Lumicom at no cost to you... so you'll also save on the inconvenience and cost of skip hire!

Programmable light levels for individual luminaires means there's never a scary dark corner, but at the same time ensures minimum energy consumption and CO2 emissions at all times.

When combined with a solar PV system, Commulite communal and emergency lighting runs at Net Carbon ZERO.

As well as manufacturing in the UK, we have partnered with Just One Tree, who plant a new tree for every luminaire you install... so in a typical block that's 200 new trees, the equivalent of *4.5 tonnes of CO2 EVERY YEAR on top of the 10 tonnes you'll save EVERY YEAR with our lighting when switching from compact fluorescents.

Commulite Systems are manufactured in the UK further reducing the CO2 emissions associated with importing goods, whilst also supporting local industry in the UK.

*Ave/tree worldwide

Helping you future-proof your investment by superseding current compliance standards, minimising energy consumption and emissions, and ensuring the best solution for you and your residents, guaranteed.
