Gravity Cover

Product Description

GravityCover is an accessory for the Gravity System, designed for raised flooring installations where synthetic grass is being installed over GravityGrid.

The cover creates a smooth, stable and non-perforated layer over the grid, helping to prevent the synthetic grass surface from sinking into the openings below. It clips securely into the GravityGrid using an integrated fixing detail and is quick to install without specialist tools.

GravityCover includes drainage holes to allow rainwater to pass through the system, helping to reduce water pooling and supporting the long-term performance of the synthetic grass finish. The integrated tab can also be detached and used as a connector between grids to improve installation stability.

The system is suitable for residential and commercial external applications where a clean, safe and consistent synthetic grass surface or other suitable finishes are required.

Compatibility

Compatible with Gravity Grid

Performance

GravityCover is manufactured from polypropylene, providing good resistance to acidic and alkaline substances, UV exposure and weathering. The material retains its mechanical properties over time, supporting long-term performance in external raised flooring applications.

Reaction to fire classification: E (fl).

Material

Polypropylene : PP-T20%

Operating Temperature

-40°C to +75°C

Additional Information

Allow 4 GravityCover units per 1 GravityGrid

Recycled Product

Yes

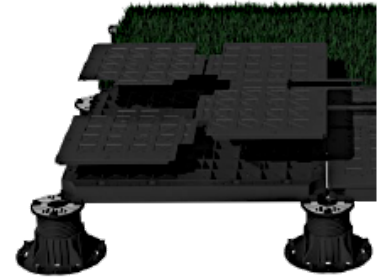

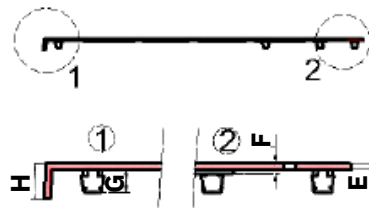

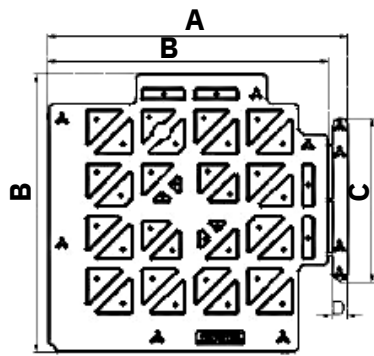

Recyclable

Yes
