Gravity Grid for Gravity System

Product Description

GravityGrid is a modular grid panel designed to maintain the integrity of raised flooring installations, even in the event of tile breakage. Used as part of the Gravity System, it helps prevent loose or fractured tiles from dislodging, reducing the risk of fall related injuries in external raised paving areas.

Installed on Mega Balance adjustable pedestals, GravityGrid provides continuous support beneath raised flooring, making it suitable for a wide range of tile sizes and layouts, including multi-format, small and cut tiles. It creates a stable, uniform surface while helping to maintain the integrity of the installation. When used with GravityCross and GravityLock accessories, it enables controlled tile removal for underfloor access and provides a wind uplift solution for installations using 600 x 600 mm porcelain tiles.

Compatibility

Compatible with the Mega Balance adjustable pedestal range and GravitySystem accessories

Performance

GravityGrid is manufactured from polypropylene with talc reinforcement, providing good resistance to acidic and alkaline substances, UV exposure and weathering. The material maintains stable mechanical properties over time, supporting long term durability in external raised flooring applications. Reaction to fire classification: E (fl).

Optional Accessories

- Headpiece for Gravity System
- GravityCross
- GravityLock
- GravitySnap
- GravityFit
- GravityCover
- Profile GS-GP

*GravityGrid does not replace the mechanical properties or load-bearing capacity of the tiles.

Recycled Product

Yes

Recyclable

Yes

Material

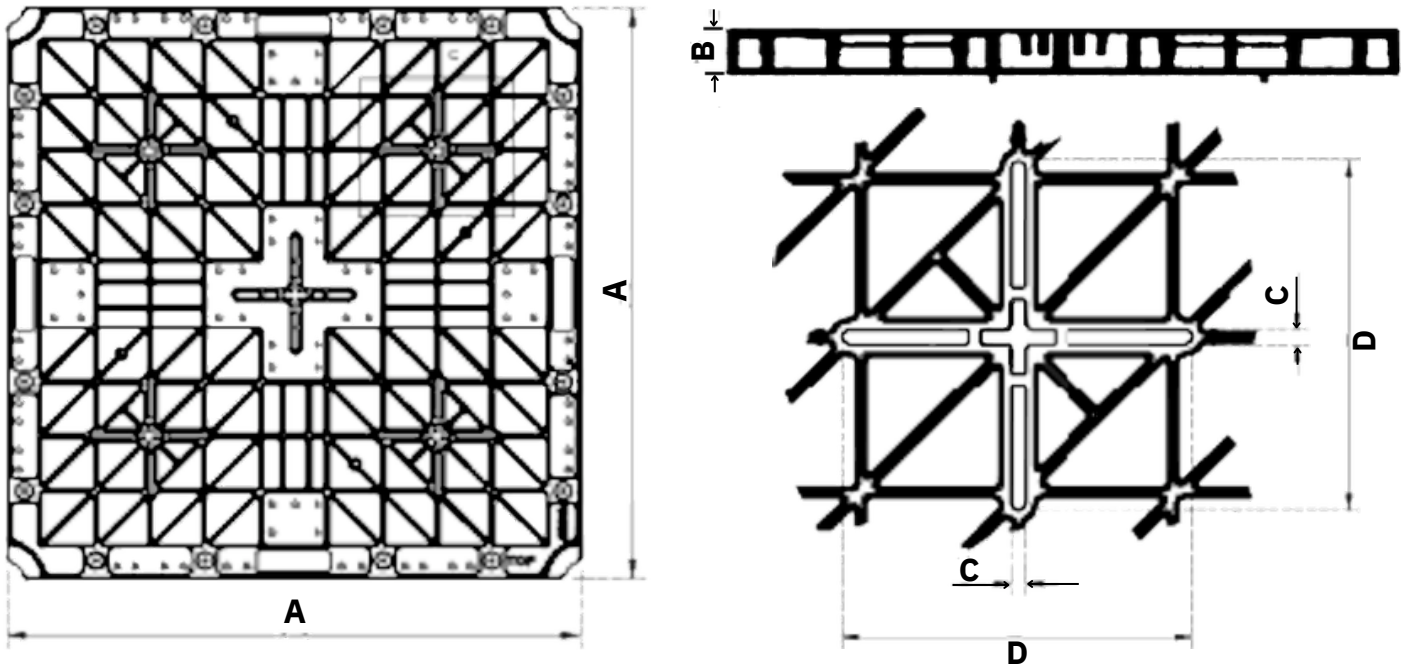

Polypropylene : PP T20%

Operating Temperature

-40°C to +75°C
