Gravity Headpiece

Product Description

Gravity Headpiece is an accessory for the Gravity System, designed for outdoor raised flooring installations using GravityGrid as the support base.

Two versions are available: one with 2 mm lugs and one with 4 mm lugs. These lugs sit between the tiles to create a consistent, even gap across the surface for drainage. The lugs can be removed where required, allowing the headpiece to be adapted for edges, corners and specific installation details.

Compatibility

Compatible with Gravity Grid

Performance

Gravity Headpiece is manufactured from a flexible TPE material that is resistant to degradation caused by sunlight, ozone and other atmospheric or chemical agents commonly present in external environments.

The material provides an anti-shock function, helping to reduce footstep noise by cushioning contact between the tile and GravityGrid, while providing sufficient friction to help keep tiles in position. The material maintains its mechanical characteristics over time and has a fire reaction classification of E(fl).

Material

TPE

Recycled Product

No

Available Lug Sizes

2mm & 4mm

Recyclable

Yes

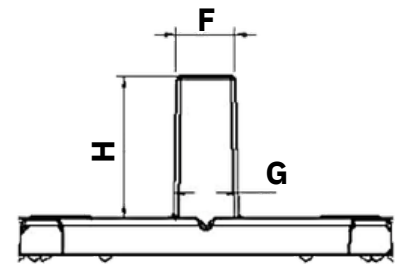

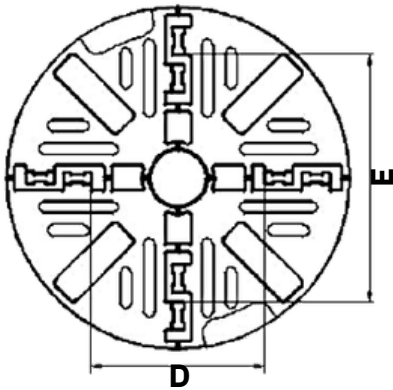

Operating Temperature

-20°C to +75°C
