Polypropylene Edge Plate

FUNCTION	The Polypropylene Edge Plate is designed to prevent direct contact between paving slabs or tiles and perimeter elements such as walls, upstands, or parapets. Its curved front edge acts as a buffer, helping to protect adjacent surfaces from impact damage while maintaining a consistent drainage gap. The plate's shape allows for minor movement in the paving surface, reducing stress on the tiles. A central slit enables it to sit securely over the lugs or fins of pedestal headpieces or support pads, ensuring stable positioning without mechanical fixings.
COMPATABILITY	Compatible with all Wallbarn's Polypropylene range of pedestals (with 2mm & 4mm Lugs on headpiece)
RECYCLED	No
RECYCLABLE	Yes
MATERIAL	Manufactured from high quality polypropylene and are suitable for outdoor laying in normal atmospheric conditions with all technical, physical and mechanical properties maintained in the long-term.
THICKNESS	The plates are 2mm thick each and this needs to be added to the overall height when planning use of them.
