

# Does your fire retardant treated timber tick all the right boxes?

Proven fire protection for timber must have  
**3 key elements:**

## ✓ Compliance

To demonstrate compliance with European Fire Standards, a full **CLASSIFICATION REPORT** must be provided. This detailed report identifies **Euroclass** (B or C), **timber species** and **timber thickness**.

## ✓ Durability

The fire protection must be fit for purpose. As recommended by the UK Wood Protection Association, a **Humidity Resistant (HR)** treatment can be used in practically all interior situations and certain weather protected exterior situations and a **Leach Resistant (LR)** treatment can be used in all interior and exterior situations.

## ✓ Accreditation

Always insist on **independent accreditations** - they will demonstrate a quality and professional application process.

**FIRE RETARDANT TREATED TIMBER**  
FOR INTERIOR & WEATHER PROTECTED SITUATIONS

**FIRE RETARDANT TREATED TIMBER**  
FOR EXTERIOR OR SEVERE DAMP SITUATIONS

# ARCH FIRE RETARDANT TREATMENTS

-giving you an assured choice

## DRICON®

**FIRE RETARDANT TREATED TIMBER**  
FOR INTERIOR & WEATHER PROTECTED SITUATIONS
