Product Specification

Design: 'Tommo'

Designer: Mark Gabbertas

Mark Gabbertas set up his London design studio in 1993 after three years of 'apprenticeship' in two reputable London furniture workshops and eight years at Saatchi's London office prior to that. One of five finalists at the 1999 FX International Interior Design awards with 'Tubby' and 'Tubbette' for Allermuir.

Features:

Tommo is a versatile range of elegantly proportioned, stylish and contemporary upholstered chairs, sofa and stools.

The club chair features a flexible backrest that enhances the comfort. The slender upholstered side and back panels feature a twin stitch detail, common to the whole collection, which encompasses the complete outline of the chair. The arms are at a height that comfortably fits under our range of meeting and dining tables, whilst the simple skid base is manufactured from a tubular steel frame. A simple footstool complements the club chair and can be neatly stored under the seat.

The lounge chair offers a more generous sit with slightly different proportions and seat height to the club chair, but otherwise complements it in all other respects. The matching lounge sofa is in effect a two and a half seat version of the chair.

The dining chair also shares many of the same features of the club chair, with a tapering seat pad and sloping arms. However the skid base is manufactured from solid steel wire as opposed to tube and has polypropylene feet attached. The bar stool has a comfortable upholstered seat, featuring the distinctive tailored twin stitch detail and the same solid steel wire skid base with feet.

Finishes:

The frames are either bright or satin chrome as standard. EPPC is not recommended for the skid frames.

A broad range of fabrics and leathers are available for this design, but some fabrics with little 'stretch' in them can prove difficult to upholster on this product. It may be necessary to request a sample of up to 1 metre/yard for approval, prior to production.

Marketplace:

Tommo is perfect for hotel foyers, lounges and bedrooms; reception areas; restaurant use; club lounge and lounge bar environments; plus breakout spaces in corporate interiors.

Products available in range

A530
