

GARTEC

Leading the Platform Lift Industry

Home Lifts Aritco 4000, Aritco 6000

Practical and stylish lifts for the home

Why choose Gartec?

Founded in 1994, Gartec is one of the longest established platform lift companies in the UK. Through installing more than 6,000 platform lifts to date (more than any other company), our experience means we have almost certainly worked on a project like yours.

A great combination

Aritco is a world-leading manufacturer of platform and home lifts, based in Sweden. Gartec is the UK's number one platform lift installer. Belonging to the same operating company means we enjoy a level of co-operation and partnership that few competitors can claim. This not only gives us unmatched product knowledge and expertise, it also means we can offer our clients the assurance of greater financial stability. No other UK company has more knowledge and experience of the Aritco range.

Our aim is to make your life easier

We'll work with you at every stage of your project to give you the support you need for a smooth and successful installation. Our experienced project management team will guide you through the approval stages leading you towards an agreed installation date. Our installation team and dedicated engineers will then work with you to the agreed timeframe and install your lift to your total satisfaction.

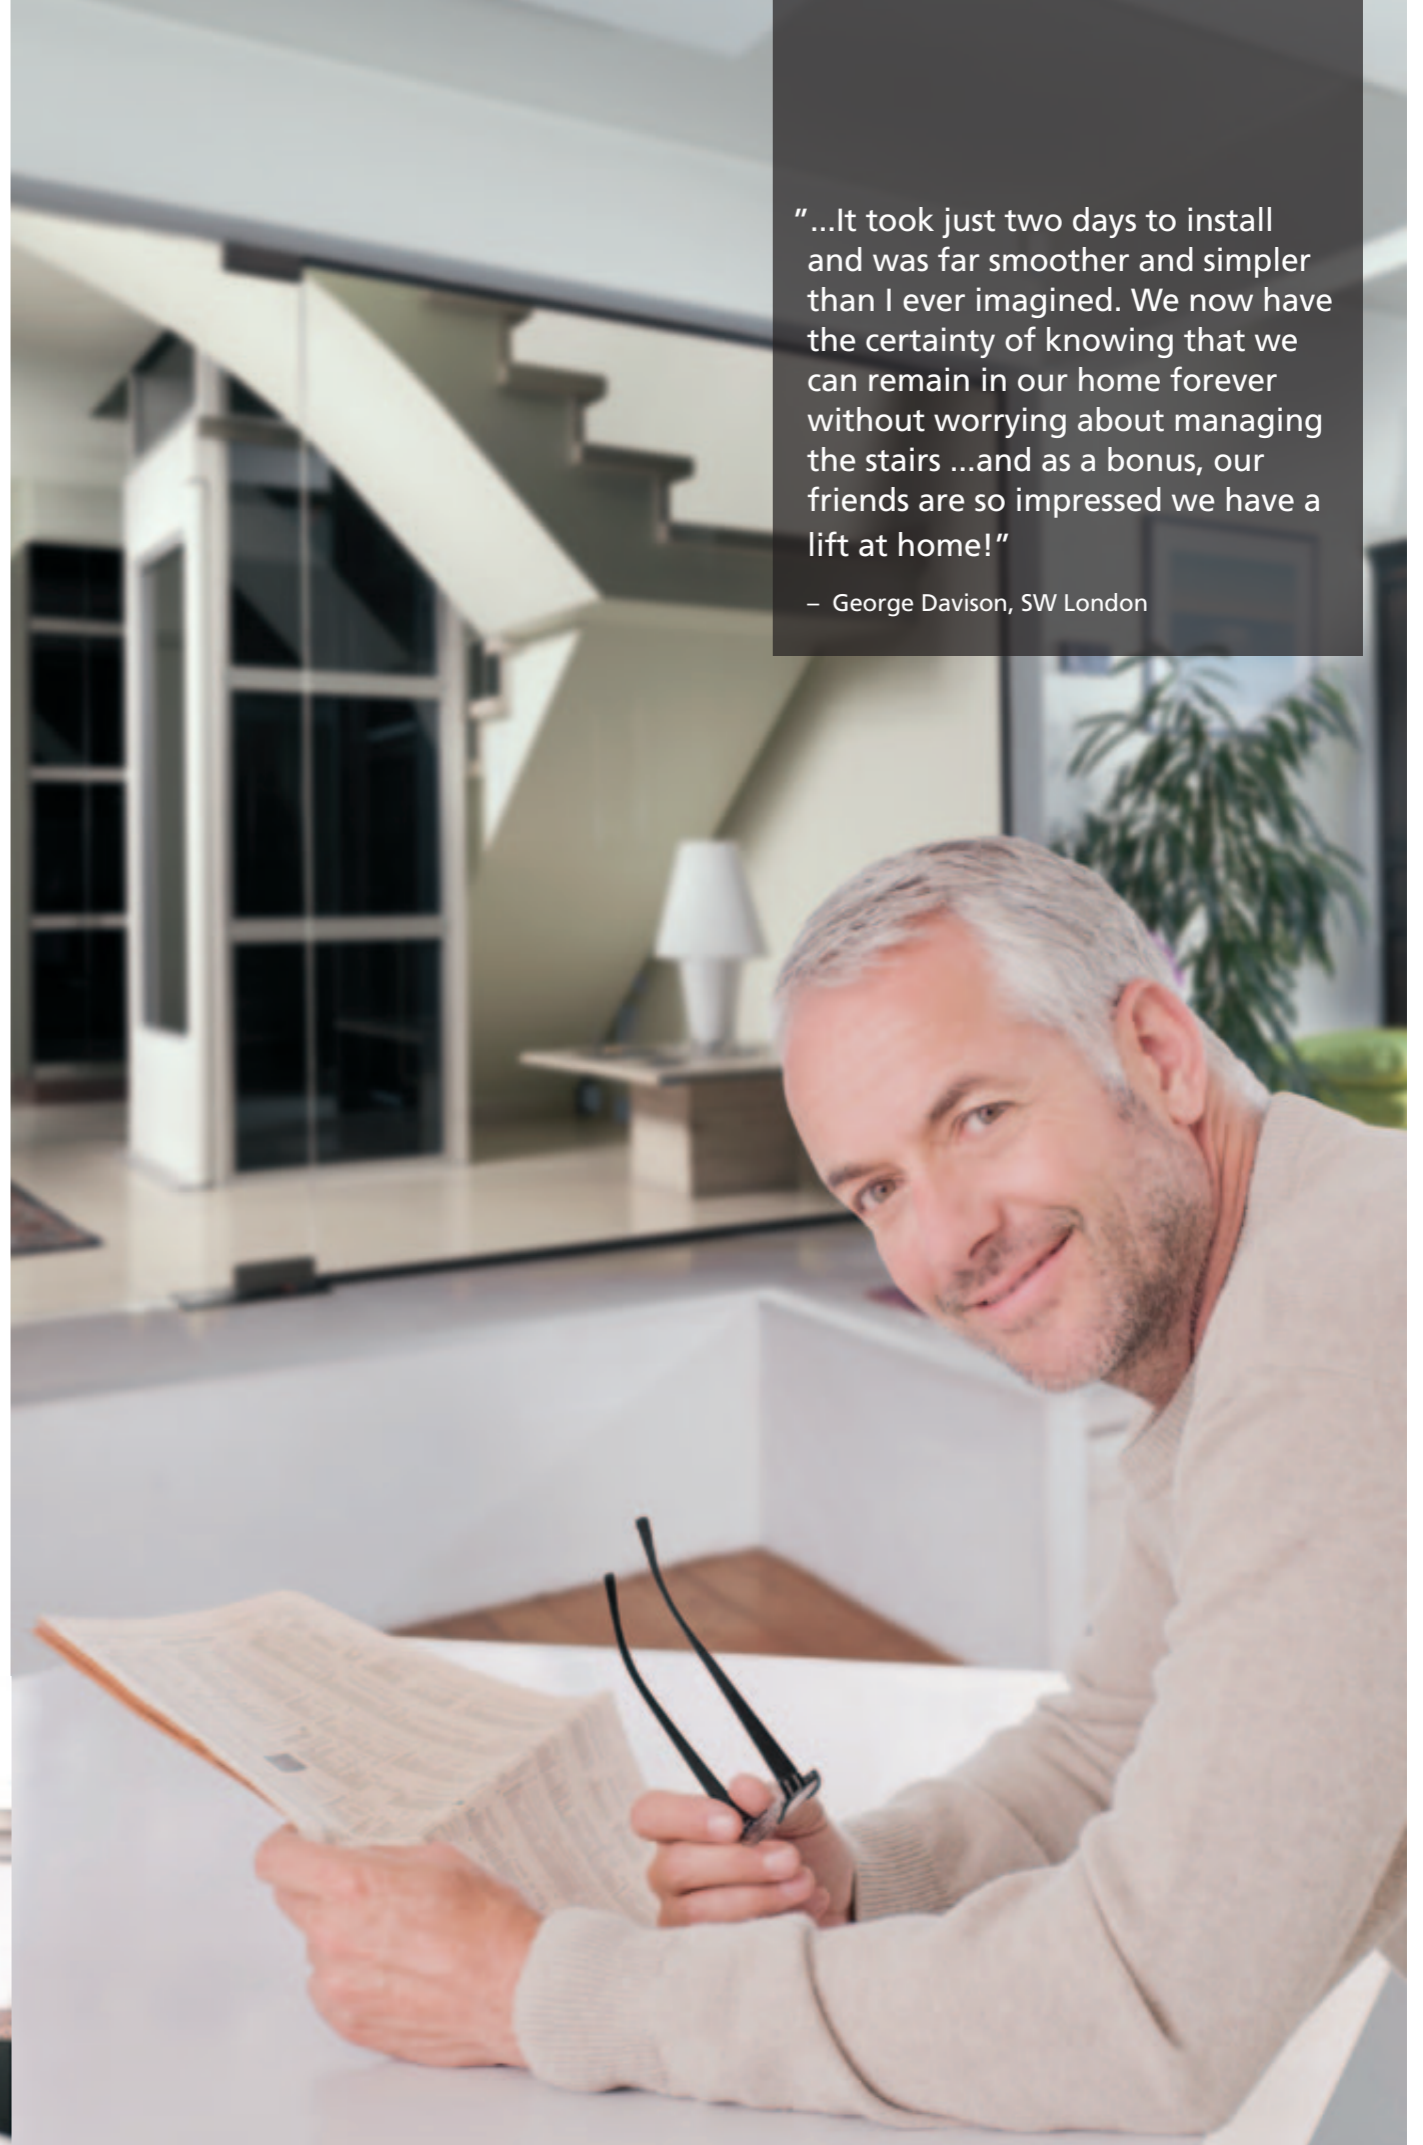

We keep your project on time and on budget and offer an unrivalled level of customer care. ISO 9001 certification means our processes are constantly reviewed and improved and customer satisfaction reviews are regularly carried out. Our commitment to service doesn't end when your lift is installed; your Gartec Home Lift is supplied with one year's warranty and two free service visits and we offer a range of service packages to ensure your lift keeps operating efficiently year after year.

Leading the Platform Lift Industry. As a founder member of the European Platform and Stairlift Association (EPSA), and through membership of the Lift and Escalator Industry Association (LEIA), Gartec takes a leadership role in shaping the platform lift industry.

"...It took just two days to install and was far smoother and simpler than I ever imagined. We now have the certainty of knowing that we can remain in our home forever without worrying about managing the stairs ...and as a bonus, our friends are so impressed we have a lift at home!"

– George Davison, SW London

The luxury of a lift in your home

A Gartec Home Lift complements any home whether new or existing, takes up less space, and is more affordable than you might imagine...

An Aritco 6000 represents the epitome of elegant Scandinavian design and makes a striking design feature for your home.

Alternatively, for a lift that discreetly blends into your existing surroundings, the Aritco 4000 with its neat, slimline look is specifically designed for occasions where space is a limitation.

Elegant, discreet, affordable.

Combining form and function

Whilst improving access and being hugely practical, Gartec's range of home lifts will add value as well as interest to your home. Whether this is your 'forever' home or you one day plan to sell, installing a Gartec Home Lift is a financially sound idea, improving the value of your home.

A home lift is there for you, your family and friends, however a home lift is so much more; laundry, prams and awkward or heavy items are all moved with ease. And the kids? Well they will just want to ride for fun.

Gartec Home Lifts are capable of travelling up to 13 metres, have capacity for up to 6 people and are easy to use for all the family.

Affordable luxury

The great majority of our customers are pleasantly surprised when it comes to price. Gartec's parent company builds many lifts in their modern, efficient factory, making a Gartec Home Lift comparable in cost to a small family car. That's luxury at a price you can afford.

Inexpensive to run too; with normal use, electrical consumption costs less than 10 pence per day. And with regular servicing, Gartec Home Lifts are well-known for working reliably, year after year.

Gartec Home Lifts also have minimal impact on the environment. In fact, Aritco is the first lift manufacturer to have an environmental product declaration on each lift.

Installs practically anywhere

Not all lifts are the same.

A conventional lift is difficult and expensive to install – it has a cabin, is operated by cables and requires a space consuming shaft with a machine room and a safety pit beneath it.

In contrast, a Gartec Home Lift does not require an existing shaft, pit or machine room. Instead, all the machinery is self-contained within the built-in shaft which makes the installation much simpler.

In essence, it can be installed practically anywhere, with minimal disruption.

Quick and easy installation

Whether you are planning a new-build or updating your existing home, all you need is a minimum available floor area of 910 x 870mm; sufficient space to install the Aritco 4000. Or, if you are planning to make a grand design statement, you might choose the Aritco 6000 with a choice of eight different size configurations.

The lift is usually fitted within a floor recess of just 50mm, although this is not essential as a ramped entrance can be provided. Since all Gartec Home Lifts are supplied as integrated units, on site construction work is kept to a minimum. This makes the installation exceptionally quick and easy and this is the key reason why Gartec Home Lift installations are complete within just two days, from start to finish.

If you have room for an extra cupboard or wardrobe, you probably have room for a Gartec Home Lift and your home could have more style, luxury and comfort in no time at all!

Could a home lift be something for you and your home?

If so, the next step is to assess how a lift could best be fitted in to your home or your plans. And that's something we would be delighted to help you with. Call Gartec on **01296 397100** for further details and a free consultation, or see www.gartec.com for more information.

Imagine the possibilities

Personalise your lift to complement or contrast with your interior's existing or proposed colour scheme. Most components, from the platform and shaft panels to the door and door frames, are available in a colour of your choice.

Choose from a huge range of finishes to ensure your lift meets your specifications. Door handles, platform handrail, flooring and more can be selected from a wide range of options.

Stylish glass panels

Glass is increasingly popular to building designers, with some of the most striking modern homes incorporating it in new and exciting ways. By specifying the home lift with 2.5m high glazed shaft panels, to coin a phrase, you too can see the light.

Flexible access

To utilize your space efficiently, entrances can be designed to allow access to the lift on three sides. As standard, Gartec Home Lifts are supplied with glass panel doors and the frames powder coated to a white finish. To aid user access, all doors are fitted with self-closing mechanisms.

A choice of platform sizes

A choice of 11 platform sizes: from the compact 805 x 580mm, up to the impressive 1000 x 1980mm. Gartec will advise you which size is most suited to your own personal criteria.

Helpful design features

Safety is of course, paramount to us. Gartec Home Lifts include standard safety features such as battery backup lowering which, in the event of a power cut, allows the user of the lift to release themselves without the need to call an additional service.

Personalise externally...

Glass

You can choose from four different nuances of glass: clear, frosted, tinted and dark tinted.

Shaft

A fully enclosed lift shaft which forms the lift's walls. Highly resistant to knocks and shocks.

Door

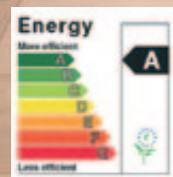

Several options available; such as fire & smoke-proof doors, double-hinged glass doors, half-height doors or full-height doors.

Colour

Select shaft, door and platform colours from 210 different shades.

Floor mats

Select from a variety of different standard floorings or add your own personal flooring.
