Formpave

Aquaslab permeable paving

Aquaslab® paving block have been designed for use on non-trafficked pedestrian areas. **Aquaslab® paving blocks can be used in conjunction with either tanked or infiltration systems.**

Aquaslab® blocks are manufactured from concrete with a tensile splitting strength in accordance with BS EN 1338:2003.

Aquaslab® blocks provide drainage through vertical channels and will allow water through the surface at a rate of approximately 9000mm per hour (9000 litres per m² per hour). The Inbitex® geotextile beneath the laying course will allow approximately 4500 litres per m² per hour through and this figure should be used for design purposes.

Aquaslab®

For use on Pedestrian areas

Size: 300 x 450 x 60mm
