

Technical Data

Steam rooms

Composition and manufacture

Helo (UK)'s modular steam rooms are designed to be freestanding units; the bespoke built steam rooms are installed within pre-built enclosures. Steam generators are available both single-phase and three-phase, 3 to 14kW.

Sitework

Helo provides a complete package: all panels and fixings, a quality safety-glass door, steam generator with controls, low-voltage lighting, and vent outlet, with installation by the company's own fitting team.

Environment

The demands of disability access can also be accommodated; disabled-entry doors, wheelchair turning circles and additions for the visually impaired can be provided.
