INDIVIDUAL SOLUTIONS FOR YOUR HOTEL

Systems for window automation

- → Improved comfort and safety
- → Reduced energy consumption
- → Compliant smoke and heat extraction

- → Touch-free entry and egress → Barrier-free accessibility
- → Enhanced security features

- → Access control for guest safety
- → Emergency exit systems
- → Flexible day and night locking solutions

- → Full building control through central building management system → Monitoring and operation of all window and door technology Sensor technology to monitor internal climate
- Weather technology to work with external climate

New build or refurbishment all from a single source!

- → Expert advice during planning phase
- Full pricing, supply, installation and commissioning
- → Full life cycle building care and maintenance

WELL-BEING, WITH CONVENIENCE AND SAFETY

GEZE solutions for the highest convenience and hygiene requirements in hotels and restaurants

Updated standards for cleanliness and Covid–19 guidelines and practices in hotels and restaurants are designed to minimise risks to guests and employees and improve safety. We are supporting these new standards, in particular by automating doors and windows. We work with you to ensure that you, as a property manager, can welcome your guests without worries, and that you can protect and care for them appropriately. Get in touch with us! Our experts will support you, from the start of the planning phase through implementation and maintenance.

- → Can doors and windows be used easily, with barrier-free access? We offer automated door and window systems providing non-contact, hygienic convenience and access for all.
- → Are all standards and legal standards met especially with regards to accessibility, safety and fire protection?
 We provide professional advice, and offer solutions that fulfil all requirements.
- → Can all surfaces be cleaned efficiently, without problems? Perfect cleanliness and efficient hygiene measures are essential for your guests to feel safe and comfortable. Make a good impression – through hygiene and cleanliness.

Non-contact convenience: Proximity switches such as the GC 306 allow users to activate automatic doors without physically touching them in indoor and outer areas – ensuring better hygiene, safety and convenience.

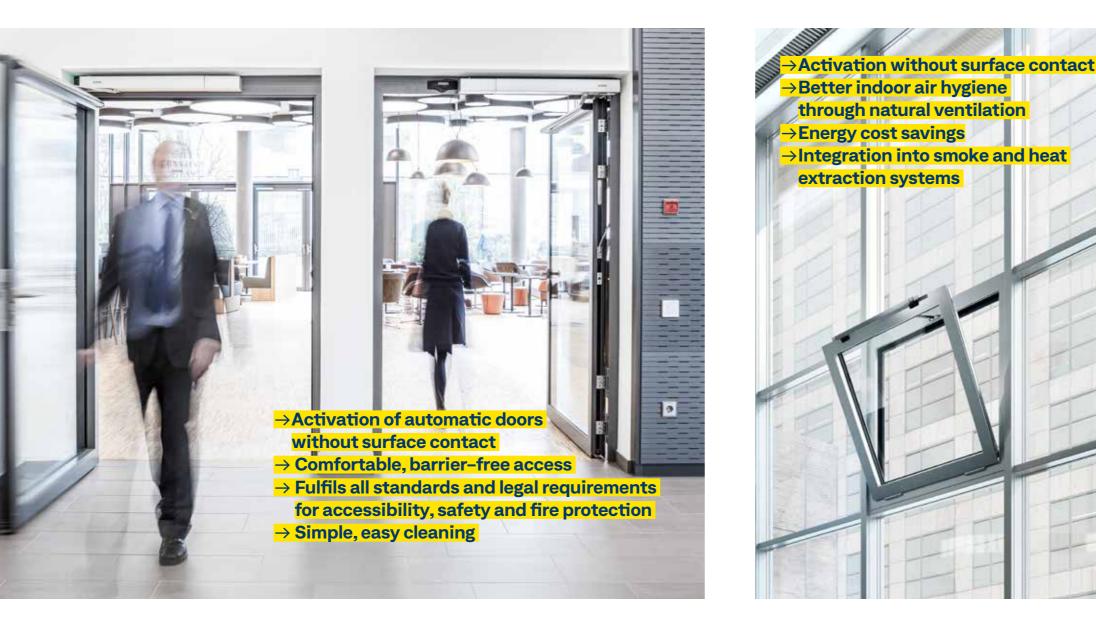

GEZE solutions for convenience and hygiene in hotels and restaurants

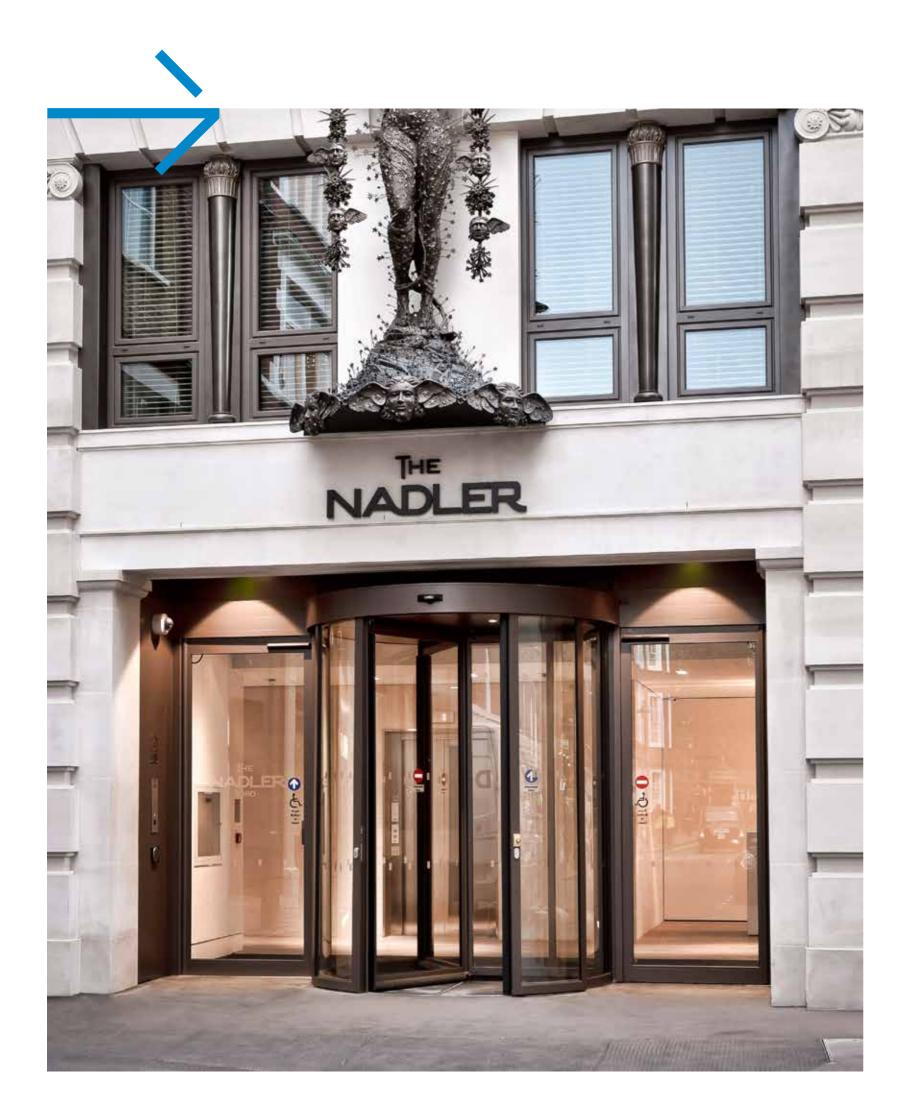

WINDOW AUTOMATION SYSTEMS FOR INTELLIGENT VENTILATION CONCEPTS

ENTRANCE AREA Striking doors, with non-contact access

Automatic door systems welcome guests and visitors with convenience and prestige. Opening doors by hand is neither comfortable nor hygienic. GEZE offers a wide variety of automation options to prevent the transmission of bacteria and germs on hands. These allow users to come and go safely with non-contact access, even in heavily frequented areas.

→ Slimdrive SLT NT-FI utomatic linear sliding door system for emergency exits with low overall height and <mark>clear design line</mark>

nical swing door drive for ngle leaf doors up to 600 kg

Accessibility Easy access for people with limited mobility

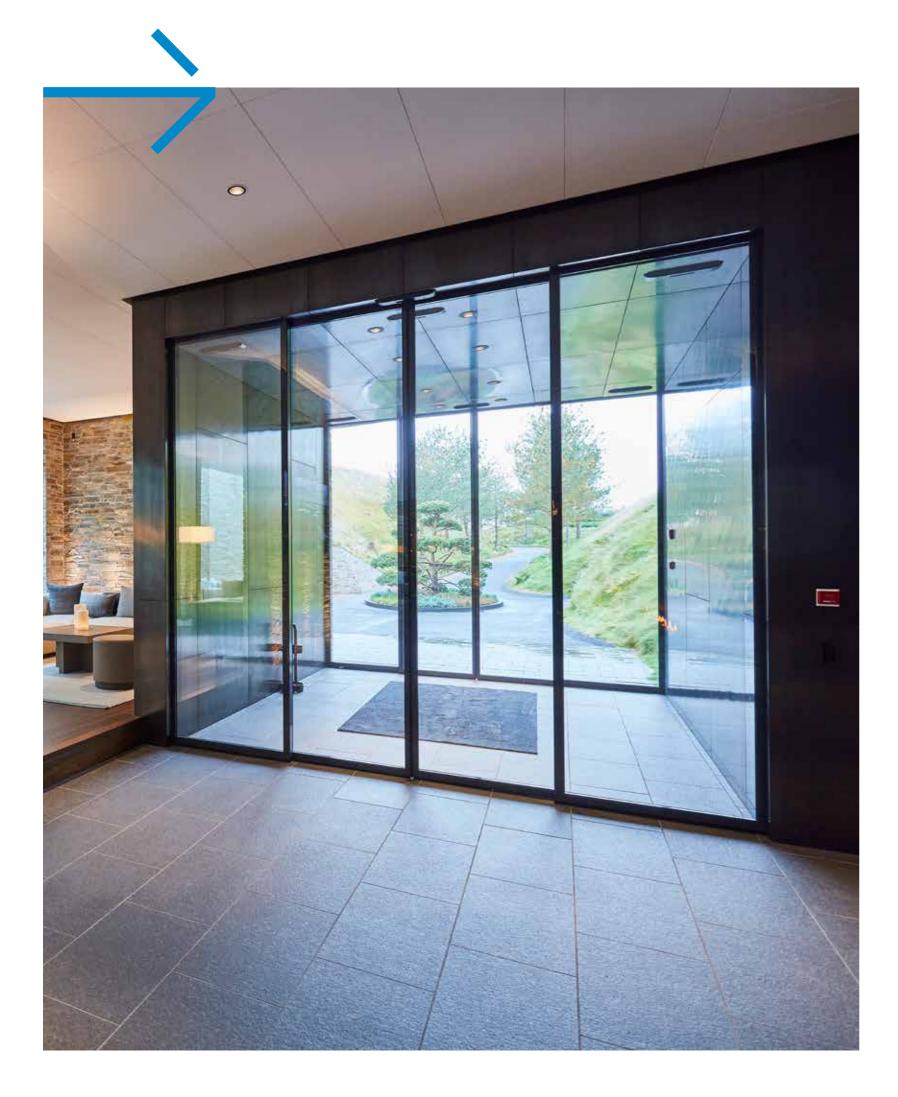

Safety

High traffic areas, maximum availability, and controlling people flow

Noise reduction Silent door drive and damping technology on revolving doors and acoustic insulation

ENTRANCE AREA A warm and safe welcome

Automatic doors also help save energy by closing immediately after use, minimising the effects on the inside temperature of cold and heat from outside. Take advantage of synergies by networking automatic doors, windows and safety technology along with smart access control. Guests receive an access code, for instance when they make their reservations.

\rightarrow \square Saving energy costs

Controlled activation of doors and windows depending on the temperature and access frequency for intelligent climate control concepts.

\rightarrow \square Maximum safety

Multifunctional system solutions combine the requirements of safety and security solutions.

 \rightarrow

Efficient access control and safe night-time access GEZE access control systems ensure that doors open only for individuals who can prove that they are authorised to enter

Pass through doors – without even noticing them

On the way through a hotel, guests pass through a variety of areas – from the lobby to corridors to guest rooms and restaurant areas. Fire protection doors and automated door systems equipped with GEZE hold-open systems allow guests to pass through with non-contact, barrier-free access - an excellent convenience feature for persons with restricted mobility and for guests with luggage or buggies. Physical contact and the possibility of transmitting germs and viruses are minimised.

nechanical swing door dr ngle leaf fire and smoke protect with integrated smoke sw

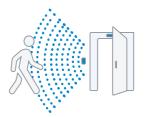

→ GEZE hold-open system ith hold-open systems, fire protection doors i our building can be used to provide barrier-free

CORRIDORS AND PASSAGE AREAS

Good ease of access

Automatic door drives or hold-open systems allow guests and personnel to move from room to room with easy access

Improved hygiene

Non-contact, hygienic convenience for building users

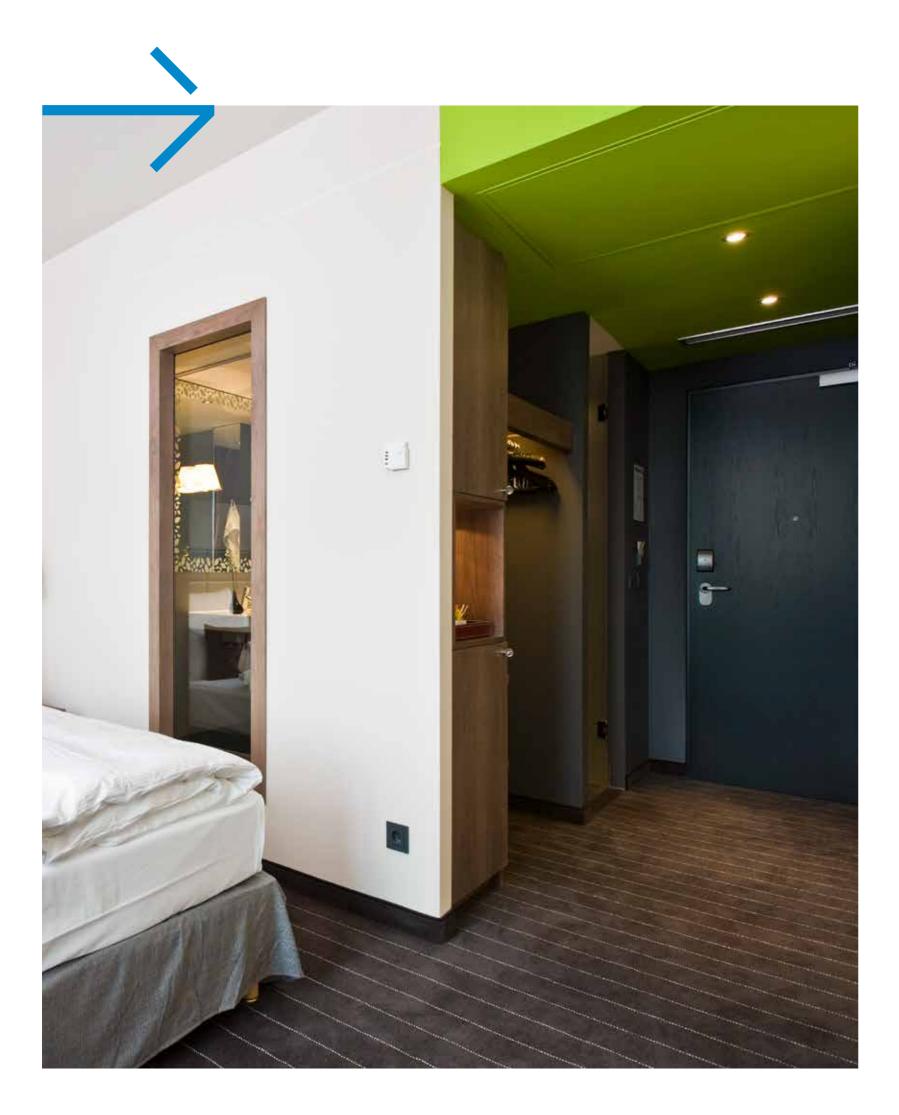

Increased safety

Automatic locking systems ensure insurance requirements are met for locks and protection

Safety in case of a fire

Hold-open systems allow fire protection doors in your building to be used with barrier-free access. In an emergency, they close fire protection doors automatically and safely.

Creating a comfortable atmosphere

In addition to a hotel's service, furnishings and guest room interiors often play a key role in guests' impressions. Hotels must combine functional convenience with an aesthetic sensibility. GEZE offers a variety of solutions to help you and your service team save time and work.

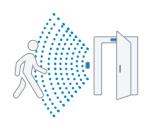

→ ECturn Inside ntegrated electromechanical swing door drive for ssible single leaf doors weighing up to 125 kg

GUEST ROOMS

-> [] [] Improved hygiene Non-contact, with hygienic convenience

Intelligent room partitions Separate areas with flexible room and sliding door systems

Noise reduction Innovative door damping ensures quiet closing

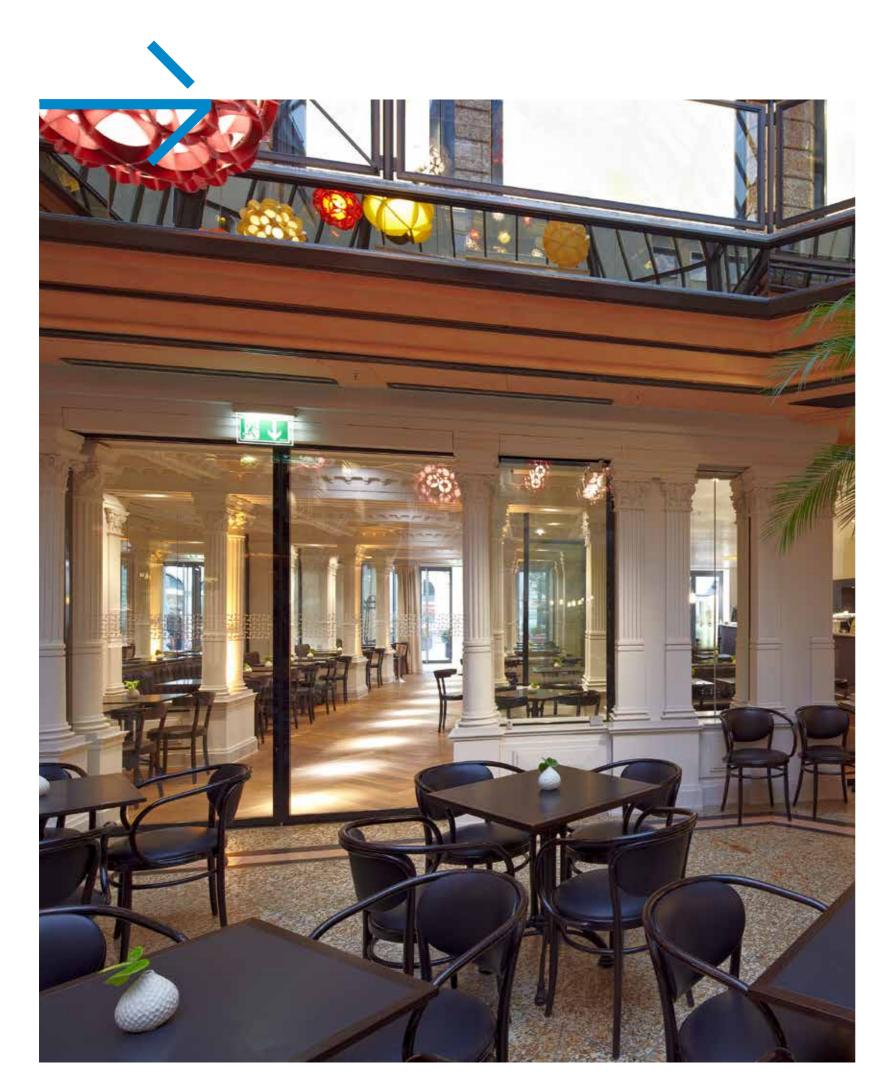

🗄 Indoor air hygiene Autonomous control of fresh air intake improves air quality

Reduced energy costs Energy savings through natural ventilation

RESTAURANTS, BARS AND BUSINESSES

Inviting, comfortable and safe enjoyment

Automated window systems controlled by sensors and carefully coordinated building automation provide fresh air. One advantage of a sufficient fresh air supply is that it improves indoor air hygiene and reduces the danger of infection with viruses in hotels and restaurants.

→ Slimdrive EMD-F Electromechanical swing door drive fo ngle leaf fire and smoke protection doors kitchen door

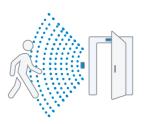

→ GC 306 proximity switch roximity switch for activating utomatic doors

GEZE Powerchair werful chain drive for opening and closing large and heavy windows

Improved hygiene \rightarrow Non-contact usage of passages

Improved safety \rightarrow Automatic locking systems that fulfil insurance requirements

> Reduced noise level Smooth and simple service

🗄 Clean air

Controlled opening and closing of windows depending on air quality provides fresh air and improves indoor air hygiene.

SPA, WELLNESS AND FITNESS AREAS

Relaxation and hygiene with no compromises

Automatic doors allow users to pass through easily – with no physical contact. This improves hygiene in spa and wellness areas. Pools, saunas, gyms and massage therapy rooms - these are all areas that require high hygienic standards, safety and peace and quiet. We ensure those standards are met through door damping and automatic door systems, combined with access control. This helps us meet new societal expectations for health and safety.

→ GEZE ECturn

Electromechanical swing door drive for accessible single leaf doors weighing up to 125 kg

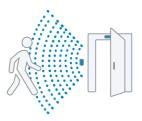

→ GC 306 proximity switch Proximity switch for activating utomatic doors

 \rightarrow GCER 300 ss control solutions for doo monitoring and controlling

The highest hygiene standards Non-contact use is important in recreational facilities. Automatic doors also offer easy cleaning

 \rightarrow [] [] Increased safety GEZE access control systems ensure that doors open only for individuals who can prove that they are authorised to enter

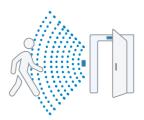

CONFERENCE ROOMS

Meetings in a quiet, concentrated atmosphere

Hotels are not only popular among holiday travellers – they are also often used for conferences and meetings. GEZE offers fully-developed solutions: door dampers and quiet door drives minimise disruptive background noise; automated windows deliver a good supply of fresh air and improve indoor air hygiene. Glass partition walls with switchable active glass provide direct privacy protection when needed - while also serving as a visual highlight, since they can be used as a projection surface as well. Make more out of your conference rooms – we are happy to advise you!

Boxe

\rightarrow

Reduced stress and improved focus Doors close quietly, even inside rooms, ensuring attendees are not distracted or disrupted in their meeting

More flexibility

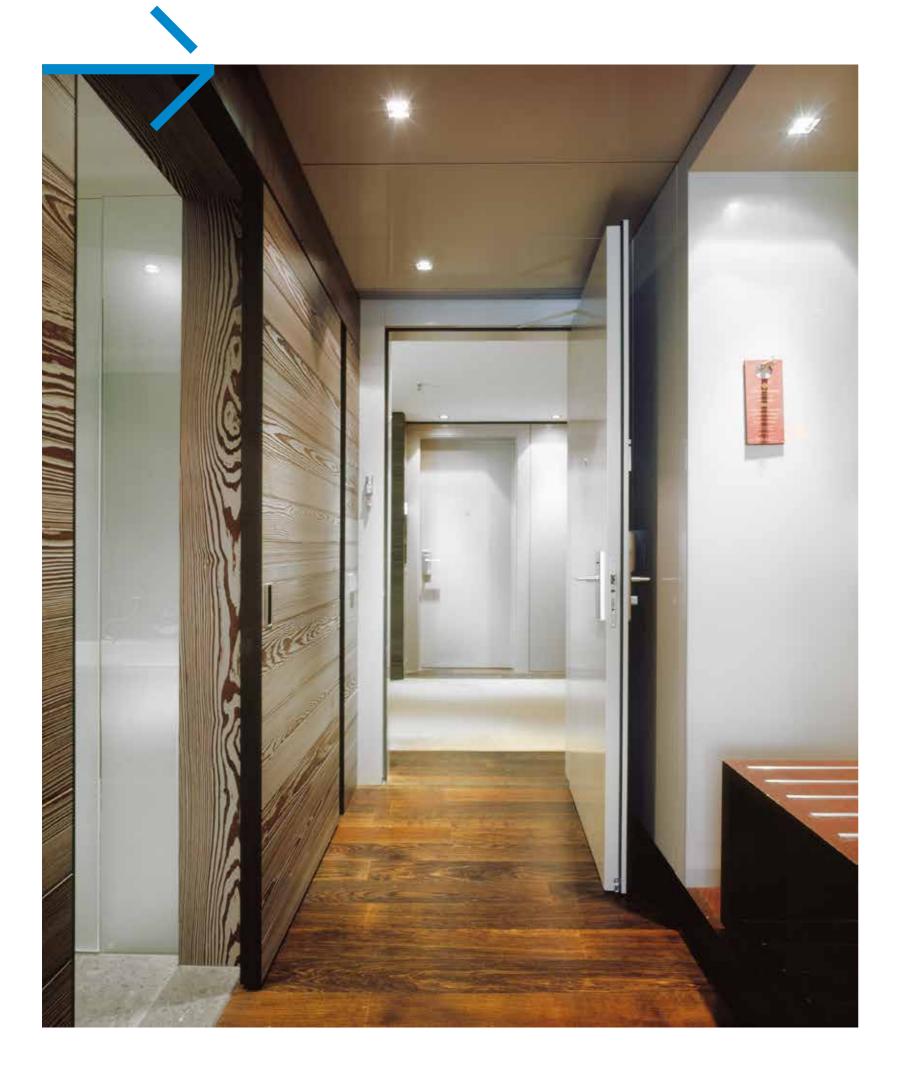

Glass partition walls with switchable glass serve as visual protection, projection surface or Whiteboard

🗄 Better indoor air hygiene

Sensors measure CO, content in the air and transmit data to the control unit. This allows for room ventilation on an as-needed basis

Save costs and time with **GEZE** solutions

GEZE offers practical and efficient solutions to facilitate cleaning and work processes and ensure cleaning personnel can do their work properly. Door closers with a hold-open function, for instance, make door stoppers mounted on the floor unnecessary. This makes room hygiene easier, because the floor can be cleaned without obstacles. Ventilation is another good example of where to save time and costs. Opening all doors and windows at once facilitates efficient ventilation.

Perlan AUT or automation of single and leaf sliding door

ntegrated electromechanical swing door drive for cessible single leaf doors weighing up to 125 kg

→ GEZE ActiveStop Door damper on both sides for swing doors for the connecting door in "family rooms"

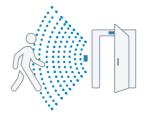

BUILDING CLEANING

Comfortable cleaning Easy cleaning and efficient work processes through holding open guest room doors

 \blacksquare Investment in clean air Controlled opening and closing of doors and windows based on air quality (inside and out) helps ensure efficient ventilation

Efficient work in optimal conditions

GEZE offers efficient solutions that help optimise the "back of house" – from safe access solutions to non-contact door and window systems with smart networking via building management systems. These allow for central monitoring and control of "back of house" doors, such as office doors for the hotel management or reservations. The building management system can react immediately in case of an alarm, malfunction or manipulation of a door.

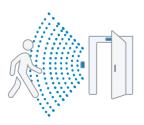

→ Slimdrive EMD-F Electromechanical swing door drive for single leaf fire and smoke protection doors

Non-contact entering and leaving with automatic door systems

 \rightarrow

Noise reduction through doors that close quietly

Improved safety

Access control systems to offices and staff areas only allow access to authorised personnel

Investments in new technology, technical retrofitting and outstanding hygienic safety are investments in the future, to ensure your guests feel comfortable and safe at your facility.

We are happy to advise you! We can even implement highly individualised requirements for door, window and safety technology, as well as building planning and hygiene.

INVEST IN THE FUTURE WITH SAFETY

Connecting expertise – building solutions.
