

Decorative Veneered Panels

PRODUCT GUIDE

Decorative Veneered Panels

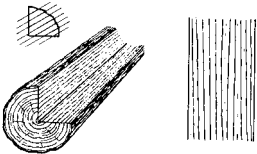

Decorative veneered panels

As a leading distributor of panel products and timber the James Latham Group holds one of the widest ranges of decorative panels in stock. Complimenting our range of melamine faced boards and laminates and laminated products we are able to offer a wide range of realwood veneered panels.

This range now includes:

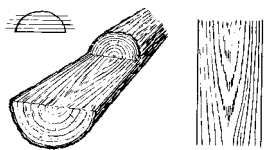

- Veneered standard and light MDF
- Veneered particleboard and timber-core doorblanks
- Veneered chipboard
- Veneered plywood and blockboard
- Veneered flexible MDF
- Flexible veneers
- Realwood decorative high-pressure laminate

Veneer cutting

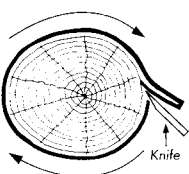

Quarter cut

Veneers are produced by cutting at right angles to the growth rings in the logs. The variations in colour brought about by summer/winter growth produce a straight grain effect.

Crown cut

Veneers are produced by slicing through logs, giving a less-straight grained veneer with more figure and, in general, a more decorative finish.

Rotary cut

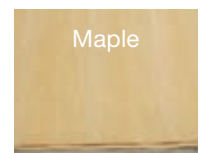

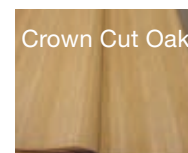

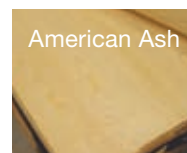

The log is mounted on a lathe and rotated to produce an exceptionally wide veneer.

Veneered medium density fibreboard

We hold a comprehensive range in stock at 9 panel depots. The most popular veneers are listed below.

- American and European, quarter and crown cut Oak
- American and European Ash
- Maple
- Cherry
- White and Steamed Beech
- Pine
- Quarter and crown cut Sapele
- American Black Walnut
- Wenge

Decorative boards are available veneered on standard, moisture resistant, exterior, flame retardant and light MDF. We are also able to offer more exotic decorative veneers such as Zebrano and Pippy Oak. We are also able to offer pre-finished boards to order.

A wide range of boards that carry FSC or PEFC accreditation are also available from stock.

We can supply Veneer swatches if required to help you choose the correct veneer specification.

Please speak to your local branch for specific details.

Finesse veneered boards *Finesse*

The James Latham group have exclusively developed Finesse grade veneer, available on a wide range of core boards, for end-users who require a high quality panel for more demanding applications.

On each species we have taken a high grade of veneer from our supplier and further enhanced this by improving in the areas that are important to our customers, based on feedback from a number of different market sectors.

Whilst it is easy to measure certain criteria, such as the width of veneer leaves, we are aware of the importance of the overall aesthetic appearance of the panel. Over a period of time, we have enhanced the Finesse grade further still by ensuring that our manufacturers have a clear understanding of how important the appearance of a whole sheet is.

Consistency is a key factor - and to that end we have ensured that our manufacturers produce a maximum number of veneers from each “flitch” and that the boards are then clearly marked in batches. Only by doing this can we offer what we believe to be the most consistent and highly graded commercial veneered board range available to the market today.

Products available

Our standard board sizes are 2440 / 3050 x 1220mm with other sizes including 3050 x 2070mm to order. Thickness range varies from 4 to 31mm, with thinner and thicker boards being available to order. We also offer a bespoke “cut-to-size” service and further processed panels.

James Latham aim to supply veneered products to meet the specific requirements of their customers. Veneer selection and grading will ultimately define our pricing. Our supply base has been very carefully selected with our customers needs’ in mind.

COLOURED/STAINED/LACQUERED VENEERS

As one of the country's leading stockists of decorative product we are also able to offer a range of further processed veneers, available on a range of core boards.

These include the 'Shinnoki' range and the colourful 'Colorado' range – all sourced from our existing veneered board suppliers. These, as with the rest of our veneered board range, are available lacquered to a finish of your choice.

Please speak to your local branch for samples and further information on these innovative ranges.
