

Sustainability

The manufacture of our KarEbinR PVC sheet material is done using a 'closed loop' manufacturing process.

- In brief terms our manufacturer utilises all their production waste into new product development or other existing products
- This means that our manufacturer only produces a new 'virgin' PVC product. Our PVC boards are traceably high-quality PVC
- 0% waste to landfill
- Reduced carbon footprint

We offer a recycling scheme for our KarEbinR PVC sheet material called ReWand. This is a collection scheme for 'clean' post installation PVC waste material

The logo for ReWand, featuring the text 'ReWand' in a bold, sans-serif font. The 'R' and 'W' are in blue, and the 'e' and 'and' are in green. The logo is set against a large, faint, circular background that contains the KarEbinR logo.
