

Innovative and Cost Effective Balcony Solutions

In high specification apartments and multi-floor houses, aesthetically pleasing balconies are specified as they provide a distinctive feature which gives the buyer an excellent first impression, maximises light penetration and enhance the view of surrounding scenery.

M&G Olympic Products design manufacture and install custom built balconies and balcony balustrading to client specifications and current Building Regulations.

Balconies and balcony balustrading can be manufactured from Stainless Steel or Mild Steel with galvanised and/or a decorative finish.

Baluster legs can be shaped to build in a unique design feature.

Increasingly modern balcony balustrading systems have infills made from toughened glass however a combination of infill bars, glass, perforated or solid mild steel decorated sheets can be utilised.

To further enhance the balustrade system a stainless steel or timber top rail can be added.

M&G Olympic Products can manage the project from concept to installation-giving specifiers an aesthetic, cost effective solution to their balcony requirements.
