

Technical Data

Swimming pool equipment

Composition and manufacture

All poolside equipment is manufactured from 316 grade stainless steel. All products are designed to withstand the large amount of use in public and commercial swimming pools. Stainless steel is an ideal material for swimming pool areas as it is of superior corrosion resistance and easy to maintain in the particularly humid atmosphere of swimming pools and leisure centres.

All balustrading is designed, fabricated and installed to conform to crowd control building regulations. All pool equipment is manufactured to British and European standards BS EN 13451.

Sitework

Site surveys undertaken; full design and development department using the most up-to-date CAD facilities.
