## Services

### Pre-Construction

---

Listening drives design. In the key design development phase, we listen to the client team – architect, owner and construction manager – asking questions, understanding and prioritizing needs, and identifying possible solutions. Novum design engineers and estimators recommend potential combinations of system products based on three primary criteria: design, schedule and budget. In an iterative collaboration, a final optimized project solution is developed and Novum provides comprehensive integrated specifications, design and details, together with a scope, schedule and price, paving the way for superior performance and cost certainty in the construction phase.

Specifications

### Project Execution

---

Transitioning from design to execution requires attention to detail. Novum excels at delivering the project management, planning, engineering, manufacturing, sourcing, logistics and site management that drive projects to completion on time, within budget. Novum Systems are typically fabricated in our own facilities, providing excellent control over product quality and project schedules. Our international procurement and quality teams source other necessary commodity items from only those vendors that meet the company's exact specifications. Experienced field teams ensure that installations proceed according to plan and on schedule, with high standards and workplace safety at the forefront.

### Post-Construction

---

Novum's commitment to client satisfaction extends beyond project completion. Warranty support and optional maintenance agreements are an integral part of every Novum project, providing clients with the security of knowing that Novum's care and expertise extend beyond initial occupancy. We work with facility management to minimize any disruptions. Our low warranty expenditures and significant repeat business are indicative of success.

## Structures + Glazing + Membranes

### Novum Single - Source Responsibility

Novum Structures is a leading international specialty contractor focused exclusively on the design, engineering, fabrication, supply and installation of technically driven architectural structures and integrated cladding. We are recognized for our customer-driven, advanced engineering skills, collaborative design development services, innovative systems approach to project design and delivery, international reach, engineered value and full service, quality project execution.

## Think Global – Act Local

In today's construction market, client teams are frequently comprised of professionals located in multiple countries. Yet site activities are exclusively local and coordination is increasingly complex. Novum has built a decentralized and flexible global team to meaningfully support both the design professional and the construction site.

Novum services are specialized and project continuity requires the right expertise, in the right place, at the right time. Our local entities have sales, project management and site capabilities. A skilled Novum engineering staff, located on four continents, provides the talent to match the specific need of each project.

We self-manufacture key items and globally source commodities for competitiveness, with local quality and schedule management of vendors. This business structure ensures that Novum is both accessible and competitive on projects worldwide. By delivering the resources to solve the unique requirements of each project, the results are high quality, speed, cost efficiency, and most importantly, client satisfaction.
