# REVEALING THE ADVANCES IN FLAT ROOFING TECHNOLOGY

Common issues associated with flat roofs such as persistent leaks, lap joint failures, long installation times and risks from hot works are simply not an issue when using quality liquid systems. Now the fastest growing sector in the flat roofing market, liquids are increasingly being specified in place of traditional roll-applied systems like felt and single-ply.

As a market leader in the manufacturing of advanced liquid roofing systems, Polyroof's free RIBA certified CPD Seminar "Flat Roofs: A Guide to Liquid Roofing Systems" is the ideal solution to stay in touch with the latest technology and advances in the field.

## SEMINAR OUTLINE

The seminar introduces the three most common types of liquid applied systems while comparing their individual characteristics and performance. Other topics covered include flat roof design, regulations, environmental performance and sustainable roof designs. The seminar finishes with an appraisal through completed case studies to highlight how and when liquid systems should be used.

## SEMINAR STRUCTURE & CONTENT LEARNING OUTCOMES:

The seminar begins with the characteristics of flat roofs and the challenges posed by them. The various types of liquid systems are then introduced with best practice guidance to ensure their appropriate specification. The latest regulations and standards are then covered along with flat roof design. Lastly, liquid systems are appraised through case studies before a question and answer session. Content learning outcomes are:

1. An understanding of liquid systems and what differentiates them from each other
2. Informed knowledge in order to choose the correct system for the application
3. Ability to design flat roofs to ensure compatibility with liquid systems
4. An understanding of the relevant regulations that affect liquid applied systems

## BRING THE SEMINAR TO LIFE WITH A PRODUCT DEMO

If your offices have an outdoor space then we encourage incorporating a live practical demonstration into the seminar. See for yourself what the capabilities of the latest in liquid roofing technology are. Various roof details, such as pipes, outlets and plinths are seamlessly encapsulated in a matter of minutes. The full system can be installed in two 5 to 10 minute sessions and helps the audience to understand the practical aspects of flat roofing better than any presentation could.

*"As a recent graduate, a physical demonstration was a much more effective way of seeing how the process was done rather than looking at 2D details and displayed how quick and easy installation."*

**Coombes Everitt
