NEW Sash Horn

The new CNC-machined sash horn detail emulates a traditional sash horn in a casement window, providing a cost-effective alternative to a traditional box sash window.

This includes a new end cap design, which creates a stronger aesthetic and is also easy to fit, saving time over mechanically jointed systems.

“Sash Horn details on casements aren’t new but our new sash horn represents a complete redesign, with a new end cap delivering a fully integrated flush finish which emulates that ‘hard-to-capture’ traditional detailing.”

The new sash horn run-through detail is available across aluplast’ range of standard foiled colours including Rosewood, Light Oak, Anthracite Grey, Cream and white.

“The sash horn detail is easy and simple to manufacture, there is no additional jointing to do over a standard casement window but it opens up a completely new sector of the market

For more information on how you can implement the NEW Sash Horn into your aluplast Ideal 70 Window call aluplast on Tel No 01684 – 273401 or e-mail info@aluplast.co.uk
