

The QUICK pedestrian bollard is made from tubular steel.

Ground fixing is through a 170mm diameter baseplate pre-drilled for ground fixing with M8 bolts (not included) or with a collar with extensions to concrete 220mm deep directly into the ground.

The bollard is hot zined and polyester powder coated.

A removable version is also available supplied with a 114mm diameter steel tube insert (to concrete-in at ground level) with suitable laser-cut flat plate to insert and lock the bollard, thanks to its orientation and the tubular key hook lock fastening. This safety system has been designed in such a way that, once the it has been removed, no open holes in the pavement remain which would cause potential dangers.

Specification:

Height: 1000mm
Diameter: 102mm
Base plate: 170mm

Removable Version
Diameter: 114mm
