

Technical Data

Reflex-Rol - Internal blinds: solar control

Operation and control

Systems can be operated manually, electro-mechanically or electronically, offering a top-to-bottom or a bottom-to-top drop.

Depending on the sizes of the shades, 24V DC motors, or 110 or 230V AC motors, will be deployed.

The Type 3000 headbox is for manually operated or Romo-Eeprom 24V motorised systems, for drops of up to 3,500mm. The unit has plated aluminium and zinc end plates, and automated cleaning brushes can be included as an optional extra.
