

Safetyworks & Solutions Ltd Roof Protection

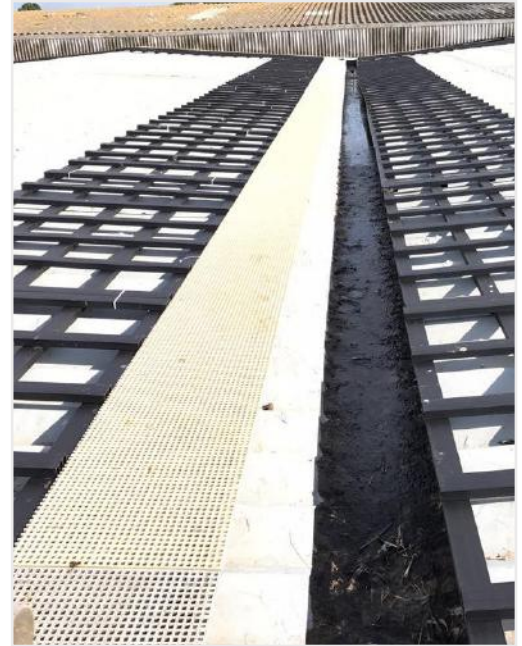

Roof Protection

Roof Protection

Safetyworks produces a wide range of roof protection to ensure the safety of the operative while on a roof, this include flexideck GRP walkways, fall guards and roof lights guards. This along with man safe fall protection will make for a safe work environment.

Felxideck GRP Walkways

Walkways are placed on seam roofs that are not suitable for people to walk across. They run along and across seam roof at any pitch of the roof. The GRP provides grip underfoot and also allows water to pass through so that it does not puddle on the roof surface.

Fall Guards

Fall guards work in conjunction with the GRP walkways to cover large sized roof lights and provide roof protection either side of the walkway. The energy absorbing design means that if anyone is too fall off the walkway they will not fall through the roof.

Roof Lights Guards

Roof light guards are made from galvanised steel using curved angle and mesh infill panelling. Multiple roof light can be joined together to span the length of any roof light. The panel will help to remove the risk of anyone or any debris from falling trough.
