

Temperature Blending Valve Adjuster

SH00-013

In many public areas supplying water at 41 °C is ideal. If however the requirement is to provide 41 °C with user adjustment between this temperature and cold (determined by the cold input temperature) then the temperature blending valve adjuster can be added to accommodate this facility. The blender adjuster is designed to be robust with good aesthetics and therefore suits all applications.

PRODUCT NUMBER

SH00-013 Temperature blending valve adjuster

TECHNICAL DATA

| | |
|------------------------------|--|
| Weight | 1.3kg |
| Material | Body: Chromed brass Fittings: DZR Brass |
| Wall thickness compatibility | 180mm - 280mm |
| Type of operation | Manual |
| Surface finish | Chromed finish |
| Water connection | Brass 1/2" BSP connection |

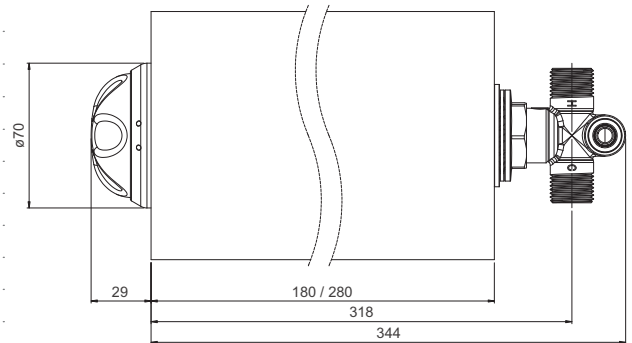

Features:

Robust construction
Tamper proof
Easy to install

Recommendations:

It is strongly recommended to fit a thermostatic mixing valve prior to fitting the blender valve.
