

## SUDS Compliance

What does SUDS compliant mean and are Star Uretech's products SUDS compliant?

### Sustainable Urban Drainage Systems

A 'SUDS' (Sustainable urban drainage system) compliant surface is any surface in which water is allowed to drain through to natural ground or directed directly into a installed soak-away or swale. The purpose of this is to allow rain water to be drip-fed into the drainage and sewage systems as appose to flowing directly into them and overburdening the drainage networks in periods of heavy rainfall.

A porous surface is one which allows water to pass through it and this is usually then fed to natural ground or drained into a suitable infiltration system. When installed in this manner a porous surface is SUDS compliant and as such, when used as part of a SUDS complaint installation...

**...the Uretech range of resin bound products are SUDS compliant.**
