

SHAW SECURITY

LONDON

COMMERCIAL DOOR SYSTEMS

Secure. Compliant. Project-ready.

Steel security doors, fire-rated doors, architectural entrances, pocket door systems, shutters and bespoke metalwork.

SR2 / SR3 / SR4

UK-WIDE SUPPLY

INSTALLATION SUPPORT

For contractors, architects, developers and facilities teams

0208 313 3535 | shawsecuritydoors.co.uk | shawsecurity.co.uk

One supplier. Multiple door packages

Shaw Security has supplied security and access solutions since 1997. Today, we support commercial and specialist projects with coordinated door packages, practical specification advice and reliable supply.

We work with main contractors, architects, developers, drylining and fit-out teams, facilities managers and specialist subcontractors. Send us the drawings, schedule and performance requirements; we will help identify a suitable route.

COORDINATED PROJECT SUPPORT

Core product groups

SECURITY DOORS

- SR2, SR3 & SR4
- Steel doorsets
- Access control options

SPECIALIST DOORS

- Fire-rated doors
- Acoustic doors
- Plant & louvred doors

ARCHITECTURAL SYSTEMS

- Pocket doors
- Communal entrances
- Aluminium doors

PROTECTION & FABRICATION

- Roller & fire shutters
- Gates & railings
- Bespoke steelwork

Security-rated steel doors

Certified security doors are selected around the threat level, site use, fire strategy, escape requirements and access-control package. Shaw Security can help coordinate the complete doorset rather than treating the leaf, frame and ironmongery as separate items.

SR2

Enhanced protection

Offices, schools, NHS buildings, retail and general commercial premises.

SR3

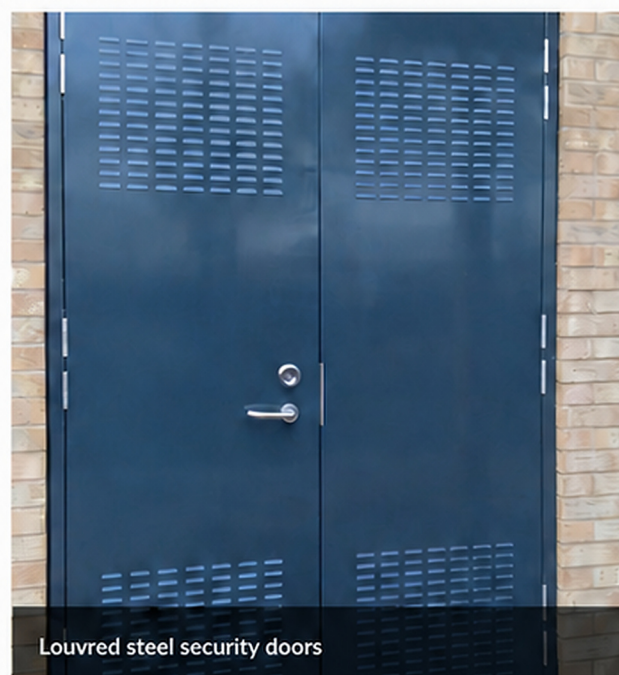

High security

Airports, utilities, warehouses, distribution centres, government and data centres.

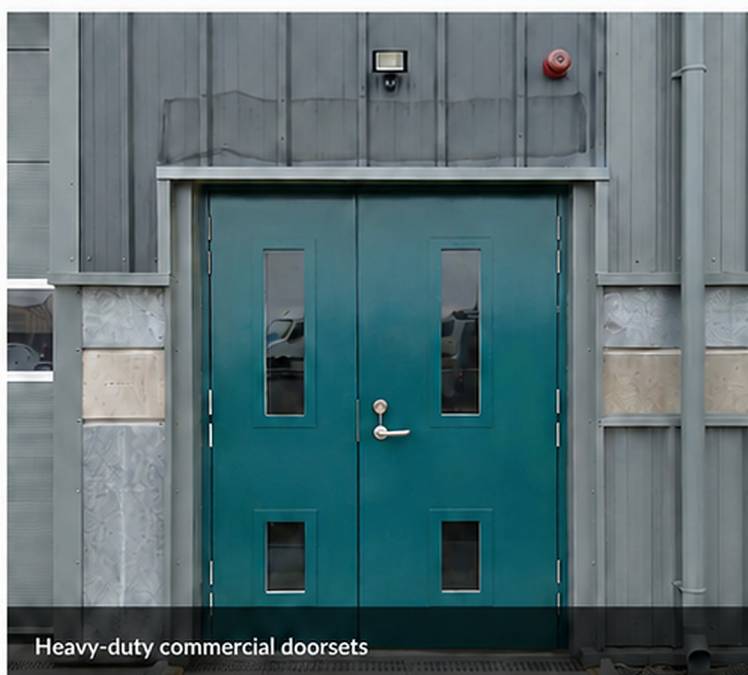

SR4

Maximum protection

Critical infrastructure, defence, secure government, pharmaceuticals and high-value storage.

Louvred steel security doors

Heavy-duty commercial doorsets

Typical configuration options

- Single or double doors
- Inward or outward opening
- Vision panels and louvers
- Panic escape hardware
- Mechanical or electric locking
- Access-control integration
- Low or DDA thresholds
- Powder-coated and specialist finishes

Steel, fire & specialist doors

Steel security doors for commercial interiors

Commercial doors often need to satisfy several requirements at once: fire performance, security, thermal efficiency, acoustics, access control, escape and appearance.

We help compare compliant options and coordinate the doorset, frame, glazing, louvres, thresholds and ironmongery against the project schedule.

FIRE-RATED DOORS

Selected steel doorsets are available with tested fire resistance. Confirm the required classification, wall construction, direction of exposure and hardware.

PLANT & LOUVRED DOORS

Ventilation, weathering, security and access can be coordinated for plant rooms, service areas, compounds and enclosures.

ACOUSTIC & THERMAL

Where required, doors can be selected around declared acoustic and U-value performance, subject to the complete tested configuration.

ACCESS & ESCAPE

Mechanical, electric and monitored locking can be combined with panic or emergency escape hardware where the approved doorset permits.

Send the schedule

Include sizes, fire rating, security rating, U-value, acoustic target, handing, wall construction, finish, hardware and installation location.

Dierre SPACE pocket door systems

A pocket door slides into the wall rather than swinging into the room. This can release usable floor area, improve circulation and create a clean architectural finish in compact or design-led interiors.

Single pocket door application

Double pocket door application

Designed for drylining and fit-out teams

- Fast 4-click frame assembly
- Single and double frame kits
- Standard stud partition applications
- Existing-opening options
- Optional soft-close arrangements
- Trade pricing and UK delivery

IMPORTANT SPECIFICATION NOTE

The Dierre SPACE frame should be proposed for suitable non-fire-rated internal openings unless a complete tested and certified fire-rated pocket doorset is separately specified. Always confirm the project fire strategy and doorset requirements.

Best suited to:

Apartments, hotels, ensembles, dressing areas, meeting rooms, washrooms, refurbishments and high-end residential projects.

Communal & aluminium entrances

Entrance doors must balance security, reliability, access, appearance and long-term maintenance. We supply and install entrance systems for residential blocks, public services, student accommodation, mixed-use buildings and commercial premises.

Glazed communal entrance system

Commercial glazed entrance

Available features and project options

- Heavy-duty aluminium or steel construction
- Secure multi-point or project-specific locking
- Audio and video entry systems
- Keypad, fob and smart-access solutions
- Automatic door operators
- Glazed side screens and overpanels
- Low thresholds and accessibility options
- Powder-coated finishes in a wide range of colours
- Repair, replacement and upgrade programmes
- Survey, design coordination, supply and installation

Shutters, gates & bespoke metalwork

Shaw Security also supports projects requiring roller shutters, fire shutters, gates, railings, fencing, handrails, staircases and bespoke steel fabrication.

Roller shutters

Fire shutters

Gates & railings

ROLLER SHUTTERS

Solid, perforated, tube-and-link, polycarbonate and aluminium curtain options for commercial and industrial openings.

FIRE SHUTTERS

Project-specific fire-protection shutters for approved applications, coordinated with the controls and fire strategy.

GATES & RAILINGS

Traditional and contemporary gates, railings, fencing and pedestrian access solutions for residential and commercial sites.

BESPOKE FABRICATION

Custom metalwork, frames, brackets, barriers, handrails, staircases and one-off project solutions.

From enquiry to handover

A clear route for contractors, architects, developers and facilities teams.

01

SEND

Drawings, schedules, sizes, ratings, hardware and site details.

02

REVIEW

We compare suitable doorsets, identify missing information and coordinate options.

03

QUOTE

A clear quotation covering supply, delivery, installation and exclusions as required.

04

DELIVER

Delivery to the specified location is made and, if requested, installation is completed.

PROJECT EXPERIENCE

Phased steel-door installations for a major London airport, supporting high-traffic, security-sensitive operational areas.

Request a quotation

Send your drawings and performance requirements. We will help identify the right door, shutter or fabrication solution for the project.
