INTRODUCTION TO SHAW SECURITY

Shaw Security, specialise in the supply and fit of high quality security shutters, polycarbonate shutters and garage roller shutters. We pride ourselves in the quality of our customer service and knowledge of our products, making sure you get the best security solution for your surroundings.

As a privately owned business, we understand the important role our clients pay in the constant development of the company, therefore each job is finished to the highest standards to maintain our reputation.

We have a wide spectrum of clients, ranging from the domestic all the way through to the corporate, ensuring that we have the experience necessary to offer a high quality security solution, that will meet and exceed your demands.

Below are a few examples of companies we have done work for.

Security Shutters

We have a wide range of roller shutters available made to measure, manual or electric, operated via key switch or remote control unit. We have a number of styles to offer, which can be powder coated to the customers choice of colour.

Our Roller Shutters have no visible hinges or operating system and require very little maintenance, if any and will never need to be painted. Due to the way our security shutters are made, you get a snug fit around the entry therefore protecting against the elements. This also means that potential intruders will be deterred.

Tested to EN13241-1:2003

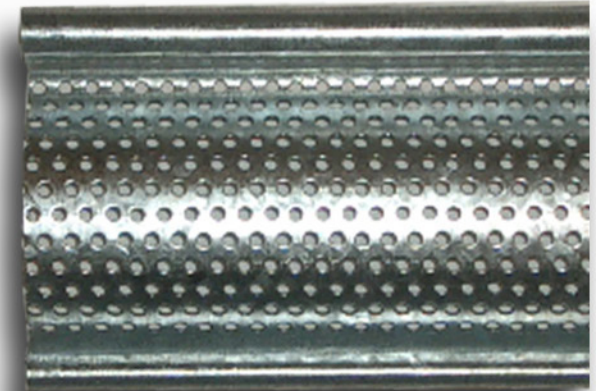

Tested to:
BS EN 13241-1:2003

'1358 Pa Achieved (class 5) on the outer face loaded in the inwards direction, no visual signs of any problems after test.'

Solid galvanised steel roller shutters, can be powder coated to any RAL colour for little or no maintenance.

Manual or automatic operated via hand held remote control unit, key switch or push button.

Constructed of 75mm curved lath, 22 gauge. galvanised steel.

Tested to:
BS EN 13241-1:2003

'1358 Pa Achieved (class 5) on the outer face loaded in the inwards direction, no visual signs of any problems after test.'

Perforated galvanised steel roller shutters, can be powder coated to any RAL colour for little or no maintenance.

Manual or automatic operated via hand held remote control unit, key switch or push button.

Constructed of 75mm curved lath, 22 gauge. galvanised steel.

Tube & Link

Tube & link shutters provide a physical barrier. Allowing a high percentage of vision through into a space, ideal for bars and window displays.

We often find that councils do not give planning permission for solid security shutters. In most cases tube & link shutters have provided the answer.

The client will often have the tube & link shutter installed to the inside of a window, providing the extra security and complying with the planning regulations.

Garage Doors

The all aluminium curtain design is constructed from double skinned roll formed aluminium with a polyurethane infill for insulation and acoustic benefits giving five times more insulating properties than a conventional steel door. The compact design of our Roller Garage Doors create extra space in your garage and on your driveway. Ideal for off-road vehicles. The Roller Garage Door is available in eight stylish colours. The durable electroplated finish eliminates the need for painting ensuring your garage door continues to look good for years representing a sound investment for your home.

New profiles have been designed to match with wood and UPVC wood effect windows. These new profiles have a laminated wood effect membrane applied to the outside face of the garage door. Colours available are Golden Oak and Mahogany Laminate.

Each Roller Garage Door is made to measure to fit your garage perfectly. Once installed your Roller Garage Door has a very low maintenance requirement and comes complete with a two-year guarantee on all manufactured parts for total peace of mind.

Flat Aluminium

Constructed from double skinned roll formed pre-stove enamelled aluminium sheet with high abrasive resistance. Manual or Automatic, operated via hand held remote control unit.

Foam filled Flat Aluminium

Identical to Flat Aluminium Security Shutters apart from a foam infill between the sheets. Advantages include, insulation and acoustic benefit.

Polycarbonate Shutters

The transparent roll-up system with a thickness of 6 mm is suitable for commercial application in airports, shopping malls, and retail and 24-hour zones of banks. The lighter 5 mm version is made for reception counters, refreshment bars and partition walls, but in addition this system is also the ideal transparent closure for your patio, loggia, swimming pool or balcony.

The Facade® system provides a high degree of protection against attempted burglaries. The system is always made to measure and can be adapted to your individual wishes. It is simple to use and easy to keep clean.

Polycarbonate Shutters

Facade® is made from clear transparent polycarbonate plate material, which after several machining steps, is suitable as a roll-up panel. The material has UV protection and is the perfect choice for long life with good weather resistance and exceptional impact resistance. Polycarbonate also has surprisingly good fire-resisting properties, being almost non-flammable and self-extinguishing.

The panels have a material thickness of 5 or 6 mm with a minimum height of 100 mm and are enclosed in a sturdy frame of extruded aluminium joining rails. These rails are attached by hinges to one another and are fitted with plastic end clips. Maximum plate length is 3000 mm.
