

The Sphere bollard is commonly used as a traffic bollard made from stainless steel sheet.

The Sphere bollard is available in two sizes.

A special stainless steel tube insert is used for installation into concrete foundations.

If the bollard is required to be removable, the in-ground fixing version is available (concreted in at ground level) with a stainless steel pin which can be opened with a square key to allow the bollard to be removed.

Specification:

Diameter: 300mm  
Height: 310mm

Diameter: 600mm  
Height: 608mm

Removable:  
Overall Height: 487mm
