

SUNDRY METALWORKS & ANCILLARIES

Precision-engineered metalwork to complete your project

Our Sundry Metalworks & Ancillaries range brings together the often-overlooked finishing touches that define a site's quality, safety and usability. From Armco barriers and palisade fencing to handrails and protective bollards, every component is designed, manufactured, and finished in Britain, combining performance with attention to detail. Designed and manufactured in Britain by our in-house specialists, each product combines precision engineering with architectural intent. Whether securing car parks, defining boundaries, or protecting building edges, our design-led approach ensures every element integrates seamlessly with its surroundings while meeting modern standards for strength, safety and sustainability.

Read on to explore our Sundry Metalworks & Ancillaries range.

- › **Bespoke British Manufacturing:** All items are designed and fabricated in-house, ensuring complete quality control
- › **Premium-Grade Materials:** Galvanised and stainless steels, PPC finishes, and reinforced fixings deliver long-term strength and consistent visual standards.
- › **Fully Customisable:** Dimensions, profiles, and mounting can be tailored to suit site conditions, load requirements and design intent.
- › **Technical Design Support:** Full CAD drawings, fabrication details and spec sheets provided for architects, developers & contractors
- › **Sustainable Production:** Manufactured using recyclable metals and low-waste fabrication methods
- › **Built for Demanding Environments:** Engineered for impact protection, structural integrity, and minimal maintenance
- › **System Compatibility:** Designed to integrate with our wider range of cycle storage, street furniture and End-of-Trip infrastructure

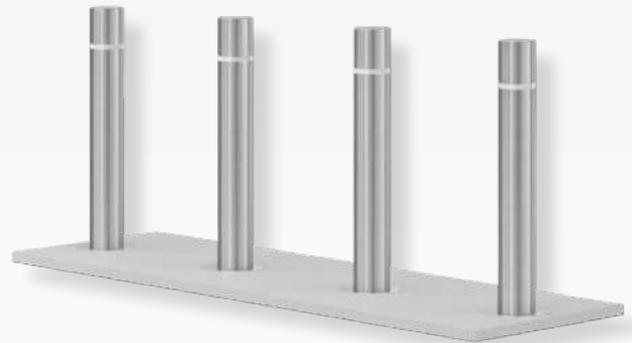

ARMCO BARRIERS

Our Armco Barriers provide durable impact protection for vehicles and structures in high-traffic environments. Engineered to meet demanding safety standards, the systems combines heavy-duty galvanised steel rails with reinforced posts, offering long-term reliability and a clean installation.

BOLLARDS

Designed and manufactured in Britain using mild or stainless steel, our bollards provide robust protection for vehicles, pedestrians and infrastructure. Available in a range of profiles, finishes, and mounting options, each unit delivers reliable impact resistance while maintaining a refined, consistent appearance.

DOOR BARRIERS

Compact yet robust. our door barriers provide reliable protection for entryways and loading bay thresholds from vehicle and trolley impact. Each barrier is precision-fabricated from heavy-duty CHS tubing and expertly finished for consistent performance in demanding, high-traffic environments.

WINDSCREENS

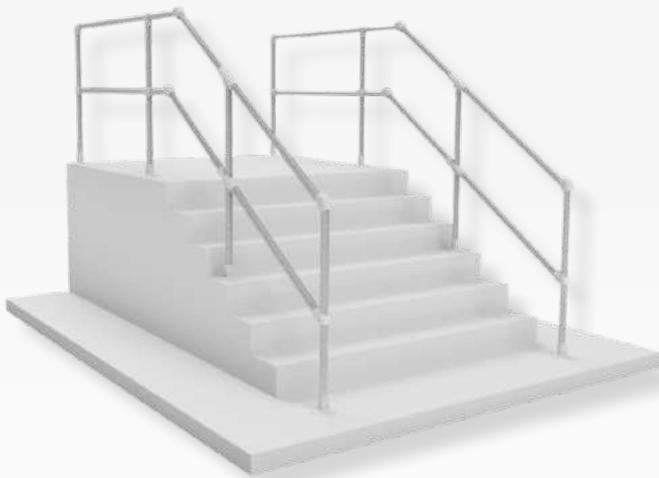

Blending form with function, our decorative windscreens provide both visual interest and protection from the elements. Manufactured from perforated steel panels, each unit is precision-engineered to meet wind-loading requirements while enhancing the architectural character of its setting.

HANDRAILS

A modular, DDA-compliant system providing safe, accessible handrails for ramps, walkways, and platforms. Each kee-clamp handrail uses precision-engineered galvanised tubing and mechanical clamp fittings, ensuring quick installation and lasting structural integrity.

PALISADE FENCING

Providing strength, security and aesthetic continuity, our palisade fencing systems deliver dependable perimeter protection for commercial and industrial sites. Manufactured in galvanised steel with optional PPC finishes, they deter unauthorised access while maintaining an ordered, professional look.

PLANT ENCLOSURES

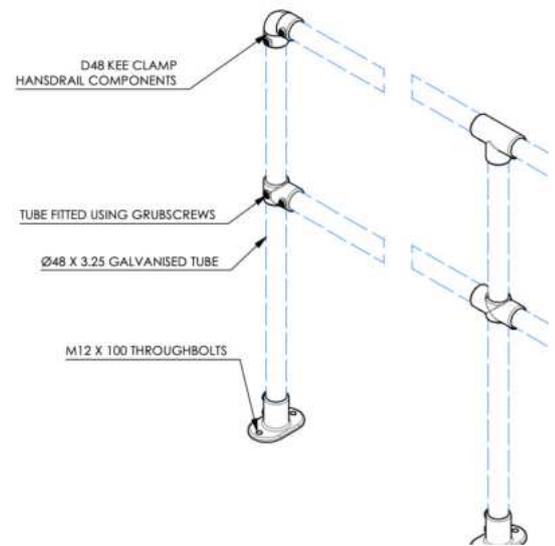

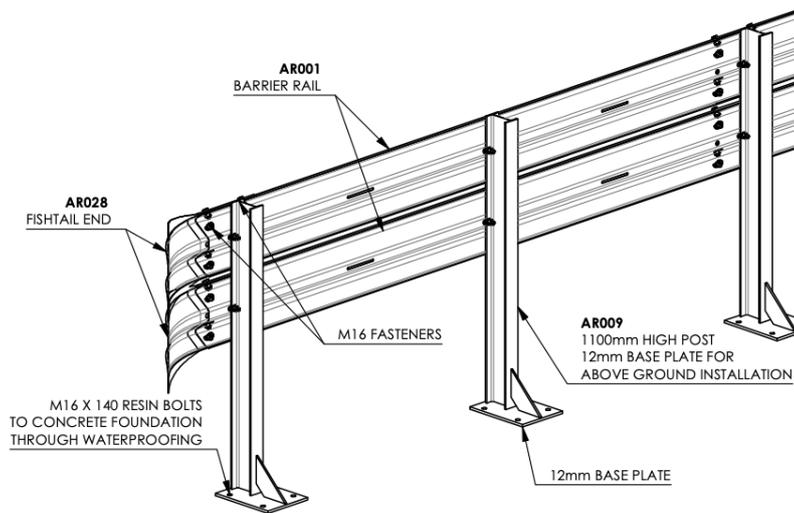

Secure and ventilated, our plant enclosures combine safety, access and visual screening for mechanical, electrical and gas installations. Each bespoke enclosure is carefully fabricated to suit the precise site layout, ensuring optimal ventilation, long-term durability, and a clean, modern architectural finish.

WALL PROTECTION

Durable and discreet, our wall and corner protection safeguard interior surfaces against everyday impact damage while maintaining a clean, architectural appearance. Each unit is engineered from a folded steel or aluminum, proving reliable protection, long-term durability, and refined finish.

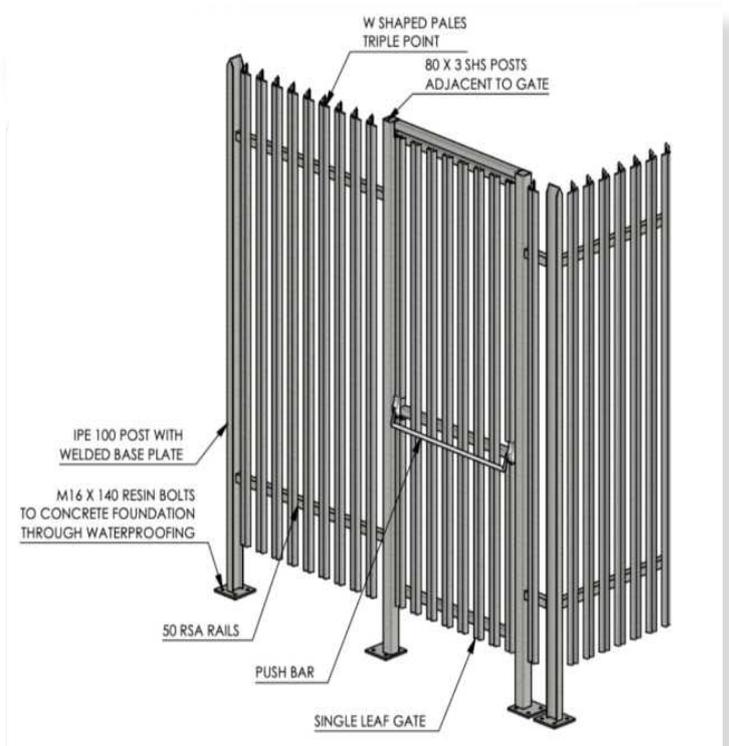

DESIGN & DRAWING CAPABILITIES

Our in-house capabilities include:

- › Full CAD & fabrication drawing support
- › 2D and 3D design detailing across all furniture types
- › Design coordination with architectural teams
- › Comprehensive setting-out plans for site installation
- › Accurate production models to BS EN ISO standards
- › Digital approval and revision tracking for all components

Lead Times

4 - 6 Weeks
