

the timber story
American White

Quercus Alba

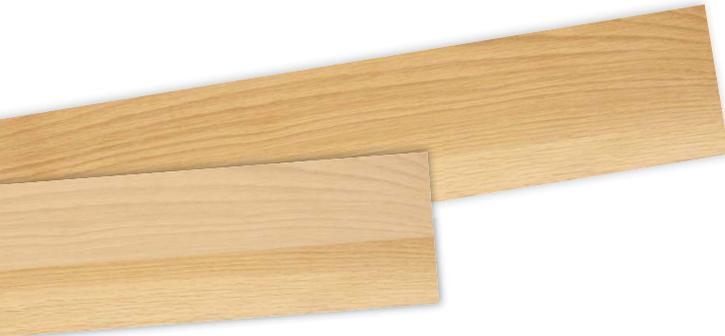

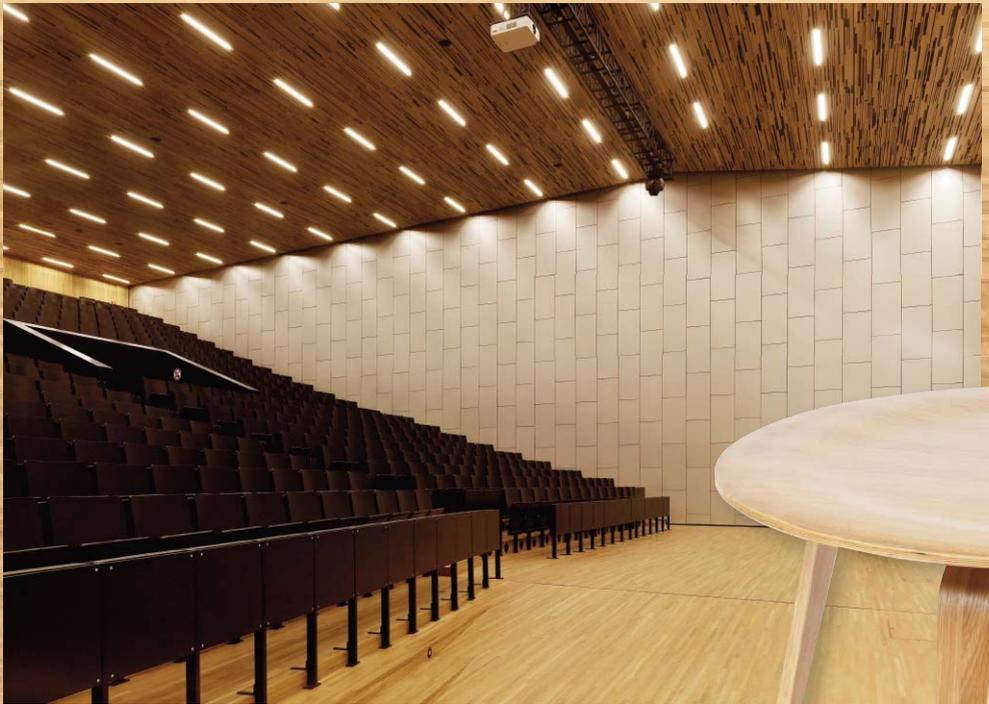

American White oak

American White Oak is one of our most popular hardwoods and due to its beautiful, textured grain and strength properties, it is widely used for interior joinery, panelling, furniture, shop-fitting and flooring.

All of the American White Oak supplied by James Latham is grown in the Appalachian Mountains in the east of North America.

When buying American White Oak it is vital to make sure you are buying material from the correct region to fit the purpose it is intended for. Material grown further north is slower grown and more consistent in colour than material produced in the southern states.

Our suppliers

Our core American White Oak stock comes from the Augusta Mill in Virginia, an area renowned for its consistent Oak, with high quality logs in plentiful supply. The Augusta product is not pulled for width, so specifications are excellent with a fair range of lengths.

Our extensive knowledge of American White Oak is based on years of experience and our visits to mills across the U.S means that we can tailor the right product for your needs. Whether it is lower grade common-select material or super-prime with hardly a defect, we will have the right product for you.

We can also supply Horizon customer cut inge log material in 25mm to 38mm, which means you can buy square edged material which has all been produced from one log, giving exact colour and grain matching if required.

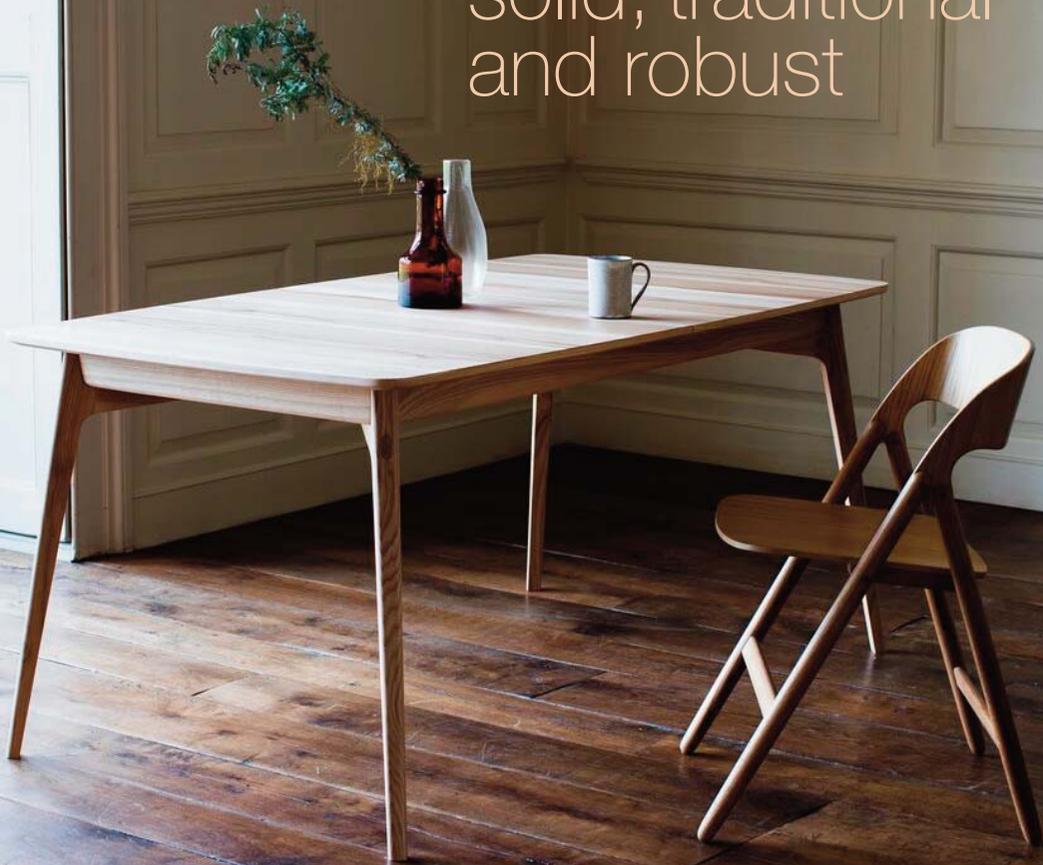

James Latham's American White Oak is available as FSC® certified when requested and in a range of specifications, including 225mm and wider stock, lengths from 1.8m to 4.88m, ripped widths, moulding blanks and pulled to width. We can supply full loads, packs or orders picked to your exact requirements.

The mark of
responsible forestry

www.lathamtimber.co.uk

solid, traditional
and robust

James Latham have spent many years working with key U.S suppliers and regularly send employees out to mills to learn more about the product and the journey of the wood from the forest to the UK. We are extremely proud of our recently introduced Timber Academy, which is a scheme designed to give young people with potential in our business the opportunity to work at a US sawmill for a short period of time.

American White Oak can be a very general term, but don't be fooled into thinking it is all the same. At James Latham we can advise you about specifying the right grade whatever your project or application.

American White Oak is traditionally very difficult to source in high quality material in 63mm and 75mm thick. At James Latham we have a long-standing supplier relationship for thick Oak from a mill in NY state and our 63mm and 75mm is exceptionally high quality with minimal, if any, degrade.

Ask your local depot for details. James Latham are also proud to stock high-end material from Blue Triangle and Wagner, both mills producing excellent, consistent American White Oak.

James Latham is committed to responsible environmental procurement and, as such, we recognise and employ the AHEC American Hardwood Environmental Profile (AHEP) when purchasing North American timber.
