PROJECT

Barton House, Oxford

Barton House, part of the SDC Group, sought to enhance its infrastructure with modern, secure, and tailored cycle storage solutions. Barton House required customised cycle storage that ensured the security and safety of bicycles while optimising available space. We installed bespoke 12 and 24-Space Amazon Eco Cycle Enclosures, constructed with hot-dipped galvanised steel for long-term durability and resistance to corrosion. Toastrack Cycle Racks were installed within these enclosures to provide secure vertical storage, maximising space efficiency. The enclosures featured premium materials, including galvanised steel and thermopine timber cladding, combining practicality with aesthetic appeal.

Barton House now benefits from secure, weather-resistance cycle storage facilities that encourage cycling and support sustainability. The Toastrack Cycle Racks and bespoke enclosures maximised space and accessibility, accommodating more bicycles easily. The project was completed with minimal disruption thanks to our professional installation service. Barton House's investment in modern cycle storage has set the foundation for future sustainability initiatives while enhancing user experience. Our expert team oversaw the installation, ensuring compliance with safety standards and site-specific conditions for a seamless process.
