## DEDICATED TO QUALITY

*For all-round performance*

*It's about materials that deliver your goals across a huge range of applications. And it's about applying those materials with market-leading expertise.*

### *Peace of mind*

All Tarmac Topsport production sites are fully BSI accredited to ISO 14001 and have also achieved ISO 9001:2000, demonstrating our dedication to customer focus, effective processes and reducing waste.

Our team of specialists can advise and guide you, whatever you're looking to achieve.

Every project has its specific needs and thanks to first-rate technical support, we have the expertise to meet them.

### *...nationwide*

With over 80 production sites throughout the country, Tarmac Topsport sources only the highest quality sands, gravels, rootzone and associated materials. This extensive network allows us to supply every project, wherever its location, with products to meet the most stringent performance specifications.

## ULTIMATE CONFIDENCE

Offering an unrivalled combination of first class service, technical support, product choice and national availability, it's no surprise that so many sports professionals turn to Tarmac's Topsport Solution.

## WINNING SOLUTIONS

*When constructing and maintaining cutting-edge sports, leisure or landscaping projects, you need materials that really perform. Tarmac Topsport supply only the highest quality sands, gravels, rootzone and associated products throughout the UK.*

Tarmac's Topsport team can work with you throughout the course of a project, to find the product solution to maximise your project's performance and longevity.

Whether you're working on a sport, leisure or landscaping project our products will make a real difference.

Tarmac is committed to the highest possible standards of material quality, undertaking rigorous testing at specialist laboratories in addition to an ongoing programme of research and development.

If a project requires a unique solution we will work with you to develop the right material to satisfy specified performance requirements.

## UNCOMPROMISING PERFORMANCE

Tarmac's Topsport range of products have a wealth of applications, ensuring market beating performance across a wide range of sports and leisure projects including golf courses, football and rugby pitches, as well as equestrian and landscaping projects. Innovative, superb quality and highly versatile, Topsport products are used in some of the most advanced sports and leisure developments in the UK.

## MATERIALS FOR EVERY APPLICATION

### **Coarse Turf**

From football to cricket, rugby to polo, Topsport coarse turf products are formulated to provide durability and consistency. We supply a range of products for coarse turf pitches including specialist sands, rootzones and Loksand. They are suitable for amelioration, drainage and sand slitting and all come with exceptional bridging capabilities.

### **Fine Turf**

Fine turf applications require specialist products. The Topsport technical team will work with you to advise on the most appropriate products or source products specified by designers. Whether you require bunker sands, rootzones or top dressing materials you can be sure of getting the right product, first time.

### **Bunker Lining**

A free draining, long life expectancy bunker lining with superior sand retention. Topsport bunker lining provides course managers with a new level of reliability and flexibility by reducing the need for sand replacement and general maintenance while improving overall playing performance.

### **Equestrian**

Specifically formulated for equestrian applications, including polo and racecourses, our products provide a consistently firm, free-draining surface. Products suitable for polo pitches, gallops and menages are available including a Loksand patented stabilisation profile.

### **Artificial Surfaces**

The Topsport range includes a number of structural, free draining and porous materials, for use in the construction of Multi Use Games Areas (MUGAs), cricket wickets and other artificial sports surfaces.

## PERFORMANCE MATTERS

### **Growing Media**

Rootzones promote quick and healthy root establishment which is vital to the success of any professional grade sports surface.

Topsport rootzones are produced at dedicated mixing stations throughout the UK, combining high quality sand blended with carefully selected organic materials to maintain organic content and pH balance in a well-drained surface. This carefully blended combination provides the optimum environment to promote the free passage of air and water to roots to support strong, natural growth.

All rootzone material is subject to an intensive testing regime to ensure a consistent high quality product, whatever the application. The Topsport range of rootzones include grades for football pitches and training facilities, winter rootzones, golf courses, racecourses and the exacting requirements of USGA accreditation.

### **Specialist Sands**

The Topsport range of amelioration materials, top dressings and lower rootzones are designed to provide the perfect balance of drainage pathways, aeration and water retention for specialist sporting applications.

### **Loksand**

Loksand is a unique polypropylene fibre-stabilised system for use in sand dominated profiles. Suitable for a variety of applications, including sports pitches, landscaping, grass access roads, in fact any turf and sand surfaces which requires enhanced structural strength due to high traffic volume.

The equestrian Loksand formulation delivers a consistently firm, free-draining, non-staining surface.

### **Gravels & Grits**

Topsport's drainage aggregates are screened and graded to maximise drainage performance and meet the exacting requirements of modern natural sports surface design. Each aggregate is sourced and designed to complement the remainder of the construction profile specified for your project.

Suitable for applications including primary and secondary drainage, slit drains and gravel carpets.

### **Synthetic Soils**

Synthetic soils are an environmentally friendly substitute to conventional soils. Our manufactured soils use PAS100 materials, which are supported by WRAP.

### **Landscaping**

When it comes to landscaping we have three priorities: availability, versatility and flexibility. Whether it's Loksand fibre reinforced landscape mix, pathway aggregates or our huge range of soils, soil conditioners, tree soils and sand/soil blends, the Topsport product range can totally transform your project's appeal.

### **Pathway & Leisure Surfaces**

A comprehensive range of high performance, naturally coloured, self-binding pathways are available to compliment your sports surfaces and landscaping designs.

For an environmentally friendly alternative, we have a range of recycled products such as Finepath & Remac to suit your project's requirements.

Decorative aggregates are sourced nationally to provide an extensive product choice to enhance the aesthetic appearance of any project.
