*Fire & Integrated
Solutions*

*Total capability from
a single source*

Total solution providers of fire, security and industrial doors

The single source provider for fire, security and industrial doors

For over a century, Tyco Fire and Integrated Solutions have been dedicated to providing specialist solutions in the design, testing, manufacture, installation, maintenance and repair of a wide range of fire, security and industrial doors.

Throughout this period we have constantly invested our time and resources in to developing a range of door products that will satisfy the demands of our clients, whilst expanding and training our service staff to provide full product support and maintenance.

Total Capabilities

- Survey
- Design
- Manufacture
- Installation
- Service & Maintenance

A totally integrated service from a single source

Our range of products are designed to suit the requirements of a wide range of building applications. Products are available for specific areas such as access control, acoustic, environmental control, fire and smoke protection, loading bay design and security or combinations e.g. fire resistant doors with acoustic ratings.

Our sales, technical and contracting personnel are trained to support our clients project needs from the early stages of design and specification through installation and commissioning. Following completion, our service operation is available with our *Door-Care* programme to ensure that the product continues to function efficiently and safely.

Computerised Door Manufacture – Standard or Bespoke

Most door products require to be purpose built to suit a specific opening size, e.g. Roller shutters. There are however, a number of products that Tyco Fire and Integrated Solutions can provide direct from stock, in a range of standard sizes, e.g. hinged fire or security doors, where openings can be determined during specification.

Whether the product is standard or bespoke, computerised programming enables us to design and control the manufacture to ensure that products are completed and delivered in time to meet the contract programme.

At the forefront of Technology

In order to maintain our position as the leading supplier of steel doors, the *Daloc* range of product has received substantial investment in new computerised manufacturing centres with the automation of all punching, folding and gluing processes. This investment means that the finished quality of the doors is now at it's highest ever.

To compliment this, new surface finishes and designs are available to bring the appearance of the doors up to levels previously reserved for bespoke timber doors.

3 Total capability from the leaders in industrial doors

We supply a comprehensive range of doors and products in the areas of:

- Access
- Acoustic
- Environment
- Fire and Smoke
- Loading Bay
- Security
- Signage
-

Tyco Fire and Integrated Solutions Daloc S20, S30 and S40 range of hinged doors can be combined to provide a complete solution to the needs of an apartment complex. The S43 security door has been specifically designed for apartment use and is tested to the latest EN standards for burglary resistance (class 3), has a sound reduction factor R_w of 35/40dB (dependant on seals) and is fire rated at 30 minutes. Finishes on all Doors can be provided to any NCS / BS / RAL colour in order to compliment the buildings decoration.

A comprehensive door range

from a one off door to a large specification project
