Choose from a comprehensive range

Water and Water Additive – Stored Pressure Fire Extinguishers

Water extinguishers are suitable for Class A fires caused by the combustion of solid materials, mainly of organic origin such as: wood, paper, straw, textiles, coal, etc.. These extinguishers are available as either full jet or super-spray versions. Water additive extinguishers use an environmentally friendly additive that greatly enhances the performance against Class A fires.

Foam Spray Extinguishers

Foam spray extinguishers (AFFF – Aqueous Film Forming Foam) are best suited for Class B flammable liquid risks where they represent a direct hazard. Foam spray extinguishers are especially suitable for Class B fires involving flammable liquids such as oils, spirits, fats and certain plastics. The blanketing effect of foam spray gives rapid knock down which smothers the flame and thus prevents re-ignition of flammable vapours by sealing the surface of the solution.

Carbon Dioxide Extinguishers

Carbon Dioxide extinguishers are suitable for class B risks involving flammable liquids and best choice for general electrical hazards. CO₂ is harmless to electrical equipment and is ideal for modern offices, electronic risks and fires caused by the combustion of liquids such as oils, fats, solvents, etc. The 2kg size has a 55B fire rating and incorporates a “safe to hold” horn which not only gives a benefit from increased performance it also prevents frost burn to the user. The carbon dioxide used is a recovered industrial by-product, thereby reducing the carbon levels contributing to the greenhouse effect.

Dry Powder Extinguishers

Dry Powder fire extinguishers are suitable for mixed fire risk environments, and are especially suited for flammable liquids and fires involving flammable gases such as methane, propane, hydrogen, natural gas, etc. This range offers a combination of fire performance and ease of service.

Wet Chemical Extinguisher (Class F)

These extinguishers have been specially produced for Class F fire risks involving cooking oils. The wet chemical agent reacts with the oil to form a soap like film to seal the surface of the oil, cool it down and extinguish the fire almost immediately.

Your one stop for Fire Extinguishers is right here.

A first class service second to none

Tyco Fire & Integrated Solutions recognise that first aid fire fighting equipment can prevent a small fire from becoming a large scale incident. With this in mind, we provide a comprehensive range of high quality, cost-effective fire extinguishers, stands, cabinets and accessories that are designed and produced to the latest standards.
