

MODULAR CONCRETE BLOCK RETAINING WALL SYSTEM

MacWall® is a segmental block retaining wall system that has the appeal of a traditional masonry wall with the engineered reassurance of soil reinforcement.

MacWall® is constructed using concrete blocks that have a split-face finish for an authentic stone look. There are a choice of colours to complement your development and its flexible construction enables corners and curves to be incorporated with ease.

A mortarless build speeds up construction in all weather. Our ParaGrid® geogrids are used in conjunction with the block fascia to reinforce the granular backfill.

MacWall® can be used for retaining walls in housing retail and insitutional developments. A BBA Certified block option is available for use on infrastructure projects.

Advantages of **MacWall®**

- M** Available in a range of colours
- M** Mortarless and simple to construct
- M** Can incorporate curves and corners
- M** Granular backfill to geogrids simplifies construction
- M** Geogrid soil reinforcement strengths and lengths are determined through design
- M** BBA certified block available on request*
