

CHRISTIAN RICHTERS FOTOGRAF

An invisible part of the worlds most visible architecture.

SCOTT FRANCES/ESTO

Invisible yet invaluable. Won-Door folding partitions' many unique features will enable you as a designer of museums - be they large or small, local or international, traditional or avant garde - to see your most creative plans realised.

A Leader in the Manufacture of A coustical and Fire Rated Folding Partitions.

The Guggenheim Museum in Bilbao, Spain and the Getty Centre in Los Angeles are two unique environments in which the architects utilised the Won-Door FireGuard™ system to address a variety of challenging safety issues from protection of vertical openings to occupancy separation. Over 3000 square feet of Won-Door FireGuard doors were used in the Guggenheim and over 6600 square feet in the Getty Centre. There was virtually no opening - whether curved or extraordinarily large - that couldn't be spanned by the patented two-track system. And Won-Door FireGuard doors are completely concealed when not in use so the grandeur of each interior was never detracted from by the sight of traditional fire doors.

SUTTON PHOTOGRAPHY

A Won-Door representative, consulted early in the project, can help you to satisfy important fire and safety requirements without compromising your design.

Spanning a variety of unusual openings, but hidden from sight when not in use, Won-Door FireGuard™ doors prove invaluable in allowing the architect to maintain the integrity of the design while satisfying safety requirements.
