

DuraSound lead lined accordion doors maximize "Swing Lab" efficiency.

Cardiac Cath "Swing Labs" are models of efficiency where two patients can be processed simultaneously. The key to this efficiency is an x-ray machine that can rotate 180 degrees – from one side to the other and one table to the other. The Won-Door DuraSound Lead-Lined XL accordion door was designed to maximize this efficiency. Installed in pairs, one door can be closed to protect the patient being prepped while the second patient is being x-rayed.

DuraSound Lead-Lined XL accordion doors are single-parting and are available in widths up to 25' 0" and heights up to 9' 0". The doors have a Lead Equivalency of .5 to 1.0. Each door is motorized to enhance ease of use and can be opened or closed with the turn of a key. A photoelectric obstruction detector prevents the door from closing should an obstruction be present. The DuraSound Lead-Lined XL accordion door requires minimal storage space – a 20' wide door stores in a shallow 34" deep pocket – an important feature when space is at a premium.

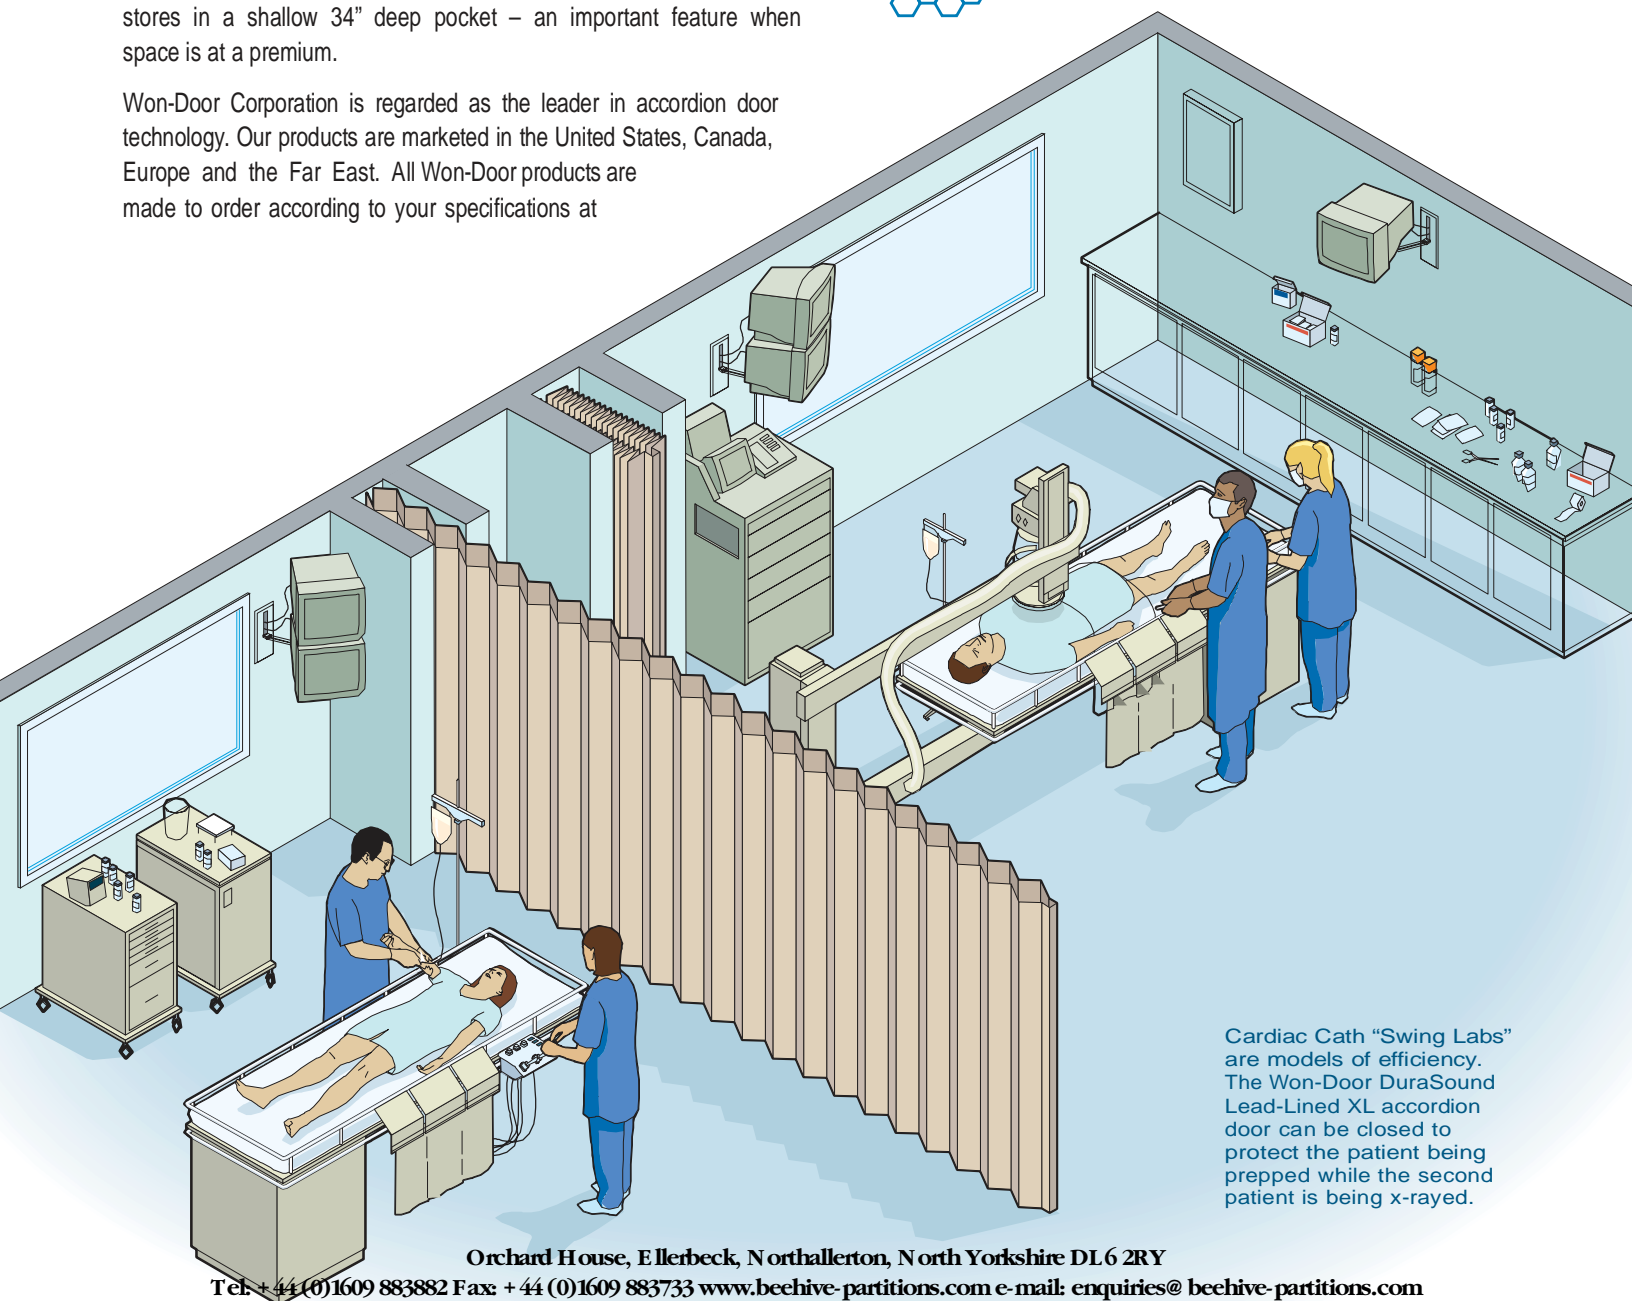

Won-Door Corporation is regarded as the leader in accordion door technology. Our products are marketed in the United States, Canada, Europe and the Far East. All Won-Door products are made to order according to your specifications at

our state-of-the-art manufacturing facility in Salt Lake City. They are thoroughly inspected and carefully packaged before they are shipped to your site. A nationwide network of factory-trained technicians assures that our doors are installed on time and serviced whenever necessary.
